7 So, where "the plaintiff contended that if the jury were satisfied of the existence of the brook, as alleged, and the diversion of the water therefrom by the defendants, he was entitled to a verdict for nominal damages, without proof of actual damage, but the presiding judge instructed the jury that unless the plaintiff suffered actual perceptible damage in consequence of the diversion the defendants were not liable in the action," the instruction was held good upon appeal and that the plaintiff could not recover nominal damages without proof of actual loss. Elliott v. Fitchburg R. R. Co., 10 Cush. 191, 57 Am. Dec. 85.

But see Blanchard v. Baker, 8 Greenl. (Me.) 253, 23 Am. Dec. 504.

1 For the States having both doctrines, see Secs. 507, 621.

2 See Secs. 594, 810-823.

by an actual use of the water, or, at least, if he is not in a position to actually use it, its loss, by diminishing the natural flow of the stream by appropriation for the irrigation of non-riparian lands, or for other useful purposes, can result only in *damnum absque injuria*. The peculiar conditions of the arid West and the great need for the use of all of the available water supply, demand that the strict construction of the common law rule in this respect be abrogated. Upon this subject, the Nebraska Court has laid down the correct rule, in holding that a riparian owner can recover for only an interference with or injury to his usufructuary estate in the water, and that, without use, no compensation may rightfully be claimed, where the water of the stream is appropriated and diverted for irrigation purposes.[3] So, as far as compensatory damages are concerned, as is the more modern rule in actions for injunction,[4] a riparian proprietor, without use, should not be permitted to recover for the diversion of the natural flow of the stream above his lands, by an appropriator, where the water diverted is actually applied to a beneficial use or purpose. But, upon the other hand, if the riparian owner is actually using the water for some purpose, "other than to afford him pleasure in its prospect,"[5] or is in a position to use it, he should recover such pecuniary damages as will recompense him fully for the actual loss sustained, and no more.

Upon the question of the right of a riparian owner to recover

3 "In order to entitle a riparian owner to compensation, he must suffer in actual loss or injury to the use of the water which the law recognizes as belonging to him, and to deprive him of which is to take from him a substantial property right. It is for an interference with or injury to his usufructuary estate in the water for which compensation may rightfully be claimed where the stream is diverted and appropriated for the use of irrigation. It is such a taking of or damage to property as materially and substantially depreciates the value of the real estate of which it forms a part." Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

See, also, Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971; Elliott v. Fitchburg R. R. Co., 10 Cush. 191, 57 Am. Dec. 85; Ulbricht v. Eufaula W. Co., 86 Ala. 587, 6 So. Rep. 78, 4 L. R. A. 572, 11 Am. St. Rep. 72; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728; City of New York v. Pine, 185 U. S. 93, 46 L. Ed. 820, 20 Sup. Ct. Rep. 592.

4 For injunctions by riparian proprietors, see Secs. 1611-1615.

5 San Joaquin etc. Co. v. Fresno etc. Co., 158 Cal. 626, 112 Pac. Rep. 182, 35 L. R. A., N. S., 832.

nominal damages, we believe that the same rule should follow as stated above relative to the recovery of compensatory damages. If, as stated by the Nebraska Court, at most the naked right to the full flow of the stream, and its loss by diminishing the volume of the water, when appropriated for a useful purpose, can "result only in *damnum absque injuria*,"[6] then a riparian proprietor, without use, should not be permitted to recover even nominal damages. The effect of a recovery of a judgment for nominal damages in such a case is but the recognition of the right of the riparian proprietor to some time in the future step in and claim the right to the use of the water as against the actual appropriators for use, and, perhaps, to utterly exclude such appropriators from any further use of the water, after they have been to the expense of diverting it and conducting it to their place of use. This is but a "dog in the manger" rule, and permits a riparian owner by successive suits, brought at intervals, to prevent the statute of limitations from running, to hold forever what is at best a mere usufructuary right, or a right of use, and that, too, where he makes no actual use of the water. Yet such is the rule of construction of the strict common law right of a riparian proprietor,[7] and has been followed many times by not only the Eastern courts, but also those of the West, and especially by the courts of California,[8] in actions brought to vindicate a usu-

[6] Crawford Co. v. Hathaway (Hall), 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889, 108 Am. St. Rep. 647.

[7] "The law, in the absence of any special injury, gives nominal damages, on the ground that the undisturbed enjoyment or continuation of such acts, without the consent of the owner, would ripen into a right to do them." Stein v. Burden, 24 Ala. 130, 60 Am. Dec. 453; *Id.*, 27 Ala. 104; *Id.*, 29 Ala. 127, 65 Am. Dec. 394.

And, in Ulbricht v. Eufaula W. Co., 86 Ala. 587, 6 So. Rep. 78, 4 L. R. A. 572, 11 Am. St. Rep. 72, it is said: "It is decided in these cases that a riparian proprietor is entitled to nominal damages for any disturbance of his right by diversion of the waters from the stream, without returning them to the natural channel, although he offers no evidence of actual or special damage."

But see Elliott v. Fitchburg R. R. Co., 10 Cush. 191, 57 Am. Dec. 85, where the Supreme Court of Massachusetts held that if the proprietor was not entitled to recover actual damages he could not recover nominal damages.

[8] The right of a riparian proprietor to have the water of a stream run through his land is a vested right, and any interference therewith imports at least nominal damages, even if there be no actual damage. Creighton v. Evans, 53 Cal. 55, 8 Morr. Min. Rep. 123.

fructuary right which was not used, and in which either nominal damages were given or an injunction granted.[9]

**§ 1666. Damages for the unlawful diversion of subterranean waters.**—As discussed in a previous portion of this work, if in fact it is known that a subterranean stream of water flows in a well-defined channel, capable of being distinctly traced, it is governed by the same rules of law as are applicable to streams flowing upon the surface of the earth.[1] It therefore follows that, as is the case with surface streams, an action at law for damages will lie for the unlawful diversion of the waters of subterranean streams, and the grounds for such an action do not differ from those for the unlawful diversion of surface streams, and, of course, the procedure is the same. This right is given to both those who have acquired the right to the water by appropriation,[2] and under the common law by virtue of their riparian ownership on such streams.[3]

Under the common law, all waters flowing or moving through the ground, whose courses are not known or defined, belong to the soil as a part and parcel thereof.[4] Therefore, under this rule of law, an action for damages for their abstraction by the owner of the land in which they are found will not lie.[5] But, owing to the recent scientific investigations, certain subterranean waters, which were formerly treated as mere percolations, have been classified, which classifications have been recognized by the courts, especially

9 For right of riparian proprietors to an injunction without use, see Sec. 1613.

1 For subterranean water courses, see Secs. 1153-1165.

2 Where a subterranean stream of water appropriated by the plaintiff was diverted by the wrongful act of the defendant, plaintiff was entitled to recover whatever damages were the proximate and direct result of the diversion. Whitmore v. Utah Fuel Co., 26 Utah 488, 73 Pac. Rep. 764; Strait v. Brown, 16 Nev. 317, 40 Am. Rep. 497.

3 For riparian ownership on subterranean streams, see Sec. 1158.

See, also, Willis v. Perry, 92 Iowa 297, 60 N. W. Rep. 727, 26 L. R. A. 124; Dickinson v. Grand Junction Canal Co., 7 Exch. 299, 21 L. J. Exch. N. S. 241, 16 Jur. 200; Chasemore v. Richards, 7 H. L. Cas. 349, 29 L. J. Exch. N. S. 81, 5 Jur. N. S. 873, 7 Week. Rep. 685; affirming 2 Hurlst. & N. 168; Acton v. Blundell, 12 Mees. & W. 324, 13 L. J. Exch. N. S. 289; Herriman Irr. Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719.

5 See Sec. 1188.

since the decisions in the California cases of Los Angeles v. Pomeroy,[6] and Katz v. Walkinshaw,[7] as either belonging to the subflow of surface streams,[8] artesian basins,[9] or to catchment basins,[10] and that certain definite rights may be acquired in and to such waters, either by the land owners whose lands overlie the same, or by appropriation. It therefore follows that, if certain definite rights may be acquired in and to such waters, for any invasion of these rights by another, damages may be recovered upon proof of the ownership of such rights, the material and substantial injury of the same by another, and the proof of the actual damages suffered from such injuries.[11] But, in order to recover damages for the abstraction of such water the land owner must prove these facts, as it is held that the mere taking of such water does not imply damages, as it is not a wrong *per se*.[12] These facts in the case of underground waters are harder to prove than in the case of surface waters; but,

9 See Sec. 1168.

10 See Sec. 1197.

11 Where there has been unnecessary delay in asserting the right, the party will be left to his action for such damages as he can prove, and an injunction will be refused. Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

For injunctions against the taking of subterranean water, see Sec. 1616.

12 Newport v. Temescal W. Co., 149 Cal. 531, 87 Pac. Rep. 372, 6 L. R. A., N. S., 1098, where it is held that where it is to the interest of the public that water be pumped and diverted to supply the needs of a town, and the monetary damages can be determined, an absolute injunction will not be granted, but merely one conditioned on the failure to make good the damages.

In an action to recover damages for the deprivation of water, it is sufficient for the plaintiff to show that the defendant's wrongful acts actually deprived the plaintiff of the water, to which he was legally entitled; and, if these acts consisted of subsurface excavations, it is not necessary for the plaintiff to show that a well-defined subterranean stream had been intercepted, or to show the particular subterranean conditions which were disturbed, provided it clearly appears that defendant's acts caused the destruction or diminution. Cohen v. La Canada etc. Co., 142 Cal. 437, 76 Pac. Rep. 47; *Id.*, 151 Cal. 680, 91 Pac. Rep. 584, 11 L. R. A., N. S., 752.

See, also, McClintock v. Hudson, 141 Cal. 275, 74 Pac. Rep. 849; Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; Burr v. Maclay Rancho W. Co., 154 Cal. 428, 98 Pac. Rep. 260; Verdugo Canyon W. Co. v. Verdugo, 152 Cal. 655, 93 Pac. Rep. 1021; Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

where proven, the party whose rights are materially injured by the unlawful acts of another may recover actual damages suffered as the direct result of such acts, or he may obtain an injunction against the future invasion of his rights.[13]

**§ 1667. Damages for the failure to furnish water under duty imposed by law.**—As we have discussed in a previous portion of this work, whenever a corporation or association is organized for the purpose of supplying consumers with water for profit or hire, a duty devolves upon such company, as a public service corporation or association, without imposing any unreasonable conditions, to furnish the water for the actual needs of such consumers, who legally apply therefor, and pay, or tender the payment of, the established rates for such water, to the full extent of the capacity of such company. Also, under certain conditions, upon the refusal of the company to furnish the water, such service may be enforced by a proper action.[1] Therefore, where a person, association, or corporation is under the duty to furnish actual consumers with water, either as imposed by law or under contract, and has failed in the past to comply with such duty and to furnish the water, an action at law for damages resulting therefrom will lie by the party injured against the party having so failed to furnish him with water.

In order for an action for damages to lie for the failure to furnish water, under the duty imposed by law, there are certain essentials which must be observed. First, the defendant company must have been a quasi-public corporation or association and under the duty to furnish the water;[2] second, it must have had the water under its control which it could have spared without infringing upon the rights of the prior applicants;[3] third, there must have been a legal application or demand for the water, made in time,

13 See cases cited above.

For injunctions against the unlawful diversion of subterranean waters, see Sec. 1616.

For the duty under contract to furnish water, see Sec. 1510.

For the compulsory service of water, see Sec. 1506.

For actions for mandamus to compel service, see Sec. 1649.

2 See Secs. 1493, 1507.

For actions for damages for breach of contract, see Sec. 1529.

3 Where the evidence was conflicting as to whether the failure resulted from the scarcity of water in the river from which a ditch was taken, or from a failure of a corporation

and accompanied with a tender of the established rates, or an actual payment of such rates;[4] fourth, there must have been a failure upon the part of the company to furnish the water;[5] and, fifth, the plaintiff must have actually sustained material and substantial damage resulting from the failure of the defendant to furnish the water.[6]

An action for damages will also lie against an irrigation district for the failure to supply water to which one within the district is entitled.[7]

**§ 1668. Damages for breach of contract to furnish water.**—Where the duty to furnish the water is imposed by a contract between the company and the consumer, in a proper case, the courts will enforce such contracts, either by decreeing specific performance of the same,[1] or, in some jurisdictions, by mandamus.[2] And, if there is a breach of the contract, and the company obligated

to maintain a proper dam across the river at the head of the ditch, and to repair a broken flume, a finding for the plaintiff will not be disturbed. Pawnee etc. Co. v. Jenkins, 1 Colo. App. 425, 29 Pac. Rep. 381.

4 Northern Colo. Irr. Co. v. Richards, 22 Colo. 450, 45 Pac. Rep. 423; Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562, 1058; Lowe v. Yolo etc. Co., 157 Cal. 503, 108 Pac. Rep. 207; affirmed, *Id.*, 8 Cal. App. 167, 96 Pac. Rep. 379; Western etc. Co. v. Chapman, 8 Kan. App. 778, 59 Pac. Rep. 1098, holding that the demand must have been made in time in order for the company to be liable for the loss of crops of any particular season.

5 See cases cited under this section.

For exemplary damages for the failure to furnish water through malice, see Sec. 1702.

6 In Northern Colo. Irr. Co. v. Richards, 22 Colo. 450, 45 Pac. Rep. 423, damages were given the owner of virgin land, which he had agreed to lease for farming and gardening purposes, for the refusal of the ditch company to furnish water without payment of a royalty as a condition precedent, and thus preventing the land from being broken and put in crops.

"They must have been damages capable of ascertainment by proof to a reasonable certainty. Uncertain and speculative profits, which might or might not have been realized, are not recoverable in such actions." Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562, 1058.

For the measure of damages for the failure to furnish water, see Secs. 1698, 1700.

7 Snake River Valley Irr. Dist. v. Stevens, 18 Idaho 541, 110 Pac. Rep. 1033.

1 For the enforcement of contracts, see Secs. 1519, 1520.

2 For the enforcement of contracts by mandamus, see Sec. 1649.

therefor fails to furnish the water, the consumer may maintain an action for damages. As to whether or not an action for damages will lie in such a case depends largely upon the terms of the contract itself,[3] the nature of the breach thereof, and as to whether or not the consumer has been materially damaged by such breach. But the general rule upon the subject may be stated that, where a water company by a contract binds itself to furnish a consumer with a certain quantity of water at a certain time, and negligently or wilfully fails to supply the water in accordance with the terms of the contract, or fails for any reason to furnish the water except on account of an act of God, or *vis major*,[4] or a waiver of the terms of the contract, either by explicit terms or by some act upon the part of the consumer, the company is liable in damages for any injury suffered as the direct and proximate result of such breach of the contract.[5]

Under the rule that an entire claim arising under contract or tort can not be made the subject of several suits for damages, it is held in California that one who elected to sue for the specific performance of an agreement to convey, instead of for damages for the breach of contract, was bound to recover incidentally thereto all his damages from delay in conveying, so that the decree for specific performance barred a subsequent action for damages from the delay.[6] Again, where there is a duty to furnish water, a re-

Richards, 22 Colo. 450, 45 Pac. Rep. 423.

guage of the contract requires the company to account to each of the consumers, respectively, or, by the use of any words, imports a separate right of action, the contract is several, and each consumer may sue upon a breach for the damages sustained by himself, without joining the other consumers.[8] A consumer may recover damages for the breach of a contract of an irrigation district agreeing to furnish him with water.[9]

It is held, however, that where the consumer did not put his land in a proper state of cultivation, and failed to avail himself of the offer of the company to furnish the water, and did not seek to minimize the injury, that he was not entitled to recover damages.[10]

Where an agent makes a contract on behalf of his principal to furnish a certain quantity of water, in excess of his authority, he is personally liable thereon, under an implied warranty of authority, for damages for the failure of the principal to furnish such water, even though he made no false representations concerning his authority.[11]

**§ 1669. Damages caused by the breakage of works.**—Water, at times, is a most dangerous element even flowing in its natural con-

dition, without the influence of man; and, when formally restrained by the works of man, it suddenly breaks through its barriers and tears through the lands below to the great destruction of life and property, it becomes even more dangerous. Therefore, in a previous section of this work, we stated to the effect that it is the duty of all irrigation or water companies, especially in the construction of dams and reservoirs for the storage or the holding back of great quantities of water, to so construct them that they will be of such a strength as to withstand all pressure of water on both ordinary and extraordinary occasions, so far as skilled human foresight can determine, and with that reasonable degree of care as is commensurate with the nature and magnitude of the undertaking, in order to protect the lives and property of those below.[1] This is the common law rule, as adopted by the leading English case upon the subject. And, under that rule, the person who stores water upon his premises, which is likely to do injury if it escapes, is held to keep it there at his peril, and that he is *prima facie* answerable for all damages which are the natural consequence of its escape, and that, too, without proof of actual negligence, or the want of reasonable care, upon the part of the owner of the works so storing the water.[2]

The English rule as laid down in the case of Rylands v. Fletcher,[3] has been literally followed by some of the American courts, where

1 For the character of construction of works, see Sec. 836.

2 Rylands v. Fletcher, L. R. 3 H. L. 330, 37 L. J. Exch. N. S. 161, 19 L. T. N. S. 220; affirming L. R. 1 Exch. 265, 12 Jur. N. S. 603, 14 Week. Rep. 799, which reversed 3 Hurlst. & C. 774, where it is said: "We think that the true rule of law is, that the person who, for his own purposes, brings on his land and collects and keeps there anything likely to do mischief if it escapes, must keep it at his own peril; and if he does not do so, is *prima facie* answerable for all the damage which is the natural consequence of its escape. He can excuse himself by showing that the escape was owing to plaintiff's default; or, perhaps, that the escape was the consequence of *vis major*, or the act of God."

See, also, Barber v. Nottingham Canal Co., 15 C. B. N. S. 726, 33 L. J. C. P. N. S. 193, 10 Jur. N. S. 260, 9 L. T. N. S. 829, 12 Week. Rep. 376, where it was held that the owner of a reservoir was not relieved from liability for injuries to a mine by the fact that the flooding of the mine was caused by the sinking of a shaft by the mine owner, which, from the porous nature of the ground, caused the water to seep from the reservoir into the mine, without the mine owner's fault.

3 *Supra.*

injuries were caused by the breaking away or the leakage of water from storage reservoirs, and from dams holding back great quantities of water.[4] But this ruling has been rejected in other States.[5]

The effect of the English rule, as can be readily seen, is to make the owners of all such works absolute insurers against all damages, and to remove the question of negligence entirely, and to hold that if the injury occurs the owner is liable in damages without regard to his negligence. Therefore, some of the American courts have refused to follow literally the rule, but hold that it is not ap-

[4] In the case of Defiance Water Co. v. Olinger, 54 Ohio St. 532, 44 N. E. Rep. 238, 32 L. R. A. 736, the Court, after citing the case of Rylands v. Fletcher, *supra*, said: "The general rule, as above stated, seems, on principle, just. The person whose grass or corn is eaten down by the escaping cattle of his neighbor, or whose mine is flooded from his neighbor's reservoir, or whose cellar is invaded by the filth of his neighbor's privy, or whose habitation is made unhealthy by the fumes or noisome vapors of his neighbor's alkali works, is damnified without any fault of his own; and it seems but reasonable and just that the neighbor, who has brought something on his own property which was not naturally there, harmless to others so long as it is confined to his own property, but which he knows to be mischievous if it gets on his neighbor's, should be obliged to make good the damage which ensues if he does not succeed in confining it to his own property."

When a land owner collects a lake on his land and permits the water to escape and destroy the land and property of an adjoining owner, he becomes liable for the damages occasioned thereby, regardless of the question of negligence in its construction. Texas etc. R. Co. v. O'Mahoney, 24 Tex. Civ. App. 631, 60 S. W. Rep. 902.

See, also, Gorham v. Gross, 125 Mass. 232, 28 Am. Rep. 224; Southard v. Brooklyn, 1 App. Div. 175, 37 N. Y. Supp. 136; Cahill v. Eastman, 18 Minn. 324, 10 Am. Rep. 184; Clear Creek etc. Co. v. Kilkenny, 5 Wyo. 38, 36 Pac. Rep. 819; Pixley v. Clark, 35 N. Y. 520, 91 Am. Dec. 299; Harwood v. Benton, 32 Vt. 724; Wilson v. New Bedford, 108 Mass. 261, 11 Am. Rep. 352.

But see Scott v. Longwell, 139 Mich. 12, 102 N. W. Rep. 230, 5 Ann. Cas. 679; Pennsylvania etc. Co. v. Sanderson, 113 Pa. St. 126, 6 Atl. Rep. 453, 57 Am. St. Rep. 445; Marshall v. Welwood, 38 N. J. Law 339, 20 Am. Dec. 394.

Damages to a riparian owner caused by another maintaining a dam, boom, and pier in the river, are recoverable, irrespective of the negligence of the latter, provided the damages are caused by the obstructions in the river. Gibson v. Cascade Lbr. Co., 54 Wash. 289, 103 Pac. Rep. 11.

[5] Losee v. Buchannan, 51 N. Y. 476, 10 Am. Rep. 623; Moore v. Berlin etc. Co., 74 N. H. 305, 67 Atl. Rep. 578, 11 L. R. A., N. S., 284, 124 Am. St. Rep. 968, 13 Am. & Eng. Ann. Cas. 217; Pennsylvania Coal Co. v. Sanderson, 113 Pa. 126, 6 Atl. Rep. 453, 57 Am. Rep. 445.

plicable to every case of the storage of water, and that the right of recovery for such injuries depends upon the negligence of the owner, or upon his want of reasonable care in the construction and maintenance of such works.[6] To be sure, it does not require the same degree of care to construct a small reservoir as is required in the construction of one of a larger type. Neither does it require the same degree of care in the construction of a ditch or canal used in the conveying of water to the place of use as is required in the construction of a reservoir. In the former the water is not restrained and the pressure is but comparatively slight, while in the latter the water is restrained and the pressure is small or great according to the size of the reservoir.[7] But, in either case, why one, who constructs a reservoir upon his own premises and stores water therein, which he knows to be "a movable, wandering thing,"[8] and always seeking to escape, should be absolutely relieved from all liability for damage when it does break out and injure the property of innocent parties, who are not in any way connected with the enterprise, simply because it can not be proven that the reservoir owner was guilty of actual negligence, or had failed to exercise ordinary care in the construction and maintenance of such works, we are unable to see. We are, therefore, very much inclined to hold that the English rule is the correct one, and that a person who so stores water upon his land does so at his peril, and is liable for the actual injuries in damages which are the direct and proximate result of the breaking out of the water, and that, too, without the proof of actual negligence, or the want of ordinary care, upon the part of the owner of such works. All parties storing water upon their lands should also be held to the same rule. The man who constructs a duck pond, requiring slight skill or care, upon his own land should be liable for damages if the water does break out and ruin his neighbor's garden or floods his cellar. So, again, the corporations constructing these enormous reservoirs throughout the West, which reservoirs cover, at times, thousands of acres of land, and the waters of which are a hundred feet or over in depth, and where the water pressure is very great, requiring the exercise of the greatest amount of skill and care in

[6] See authorities cited in the next section.

[7] See Sec. 1670. For damages from ditches and canals, see Secs. 1672, 1673.

[8] 11 Blackstone Comm. 18.

their construction and maintenance, should be held to the same rule that they are liable for all damage resulting from breakage and overflow. If the English rule is adopted and enforced by the courts of this country, it will result in better constructed dams and reservoirs, fewer breakages, and, of course, less actual injury to life and property, and, at the same time, less damage from the failure of the company to furnish the water when it is needed by the settlers. The trouble of it is that many of these enterprises are projected by speculators and are upon the boom order. And, although, under the recent statutes in the various States, the works must be constructed under the supervision and inspection of some State official,[9] usually the State engineer, dams and reservoirs have been in the past, and undoubtedly will be in the future, hurriedly and unskillfully constructed. Settlers have been and are being induced by advertising agents to come and settle the lands, at times, in the very path of destruction, should the water break out; and, then, when it does break out and ruin the homes and farms, and perhaps destroy the lives of the settlers and their families, to hold to the rule that before damages can be recovered that the burden is upon the plaintiff to prove that the company was guilty of actual negligence, or that it failed to use reasonable care in the construction and maintenance of such reservoirs and dams, is in our opinion entirely wrong. And, if the courts do not adopt the English rule as to such liability, the legislature should, as is the case in Colorado,[10] where the statute places an absolute liability upon the owners of reservoirs for all damages arising from leakage, or overflow of the water, or by floods caused by the breakage of embankments, and which statute is held by the Supreme Court of that State to be simply an affirmation of the common law principle.[11]

**§ 1670. Liability for negligence—Damages from reservoirs.**—In any event, whether the strict rule of liability under the common law, as discussed in the previous section,[1] is adopted or not as to rule of decision in any State, any person storing water upon his land

9 For laws of State control, see Secs. 1337-1367.

10 See Mills' Ann. Stat., Sec. 2272.

11 Sylvester v. Jerome, 19 Colo. 128, 34 Pac. Rep. 760; Garnett etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79.

See, also, for statutory liability, Sec. 1671.

1 See Sec. 1669.

is liable for all injuries caused by the escape of the same and due to actual negligence, or from the want of reasonable or ordinary care in the construction or maintenance of the works used for the storage of the water.[2] But the interchangeable terms "reasonable care" or "ordinary care" used in this connection are relative. That is to say, it does not take the same degree of engineering skill to construct a small reservoir as it does a large one. And, therefore, what would be reasonable care in the construction of a small reservoir, where the water is retained by a natural depression of the earth and a brush and earthen dam, but where, even if it does break out it will do little or no damage, might be the most flagrant negligence in the construction of a large reservoir covering perhaps thousands of acres of land, and where the water pressure is very great upon the dam and natural embankments. Therefore, the degree of care which must be exercised in the construction and maintenance of these works is not the same in all cases of stored water. No rule can be stated which will be applicable to all cases; but, in those States which hold that the liability for injuries caused by the escape of the water depends upon the question of negligence or ordinary care exercised by the owners of such works in their construction and maintenance, it must also depend upon the facts and circumstances surrounding each particular case. As is said by Mr. Farnham:[3] "There are many cases where water can be stored with comparative safety, and where the effect of its es-

2 Griffith v. Lewis, 17 Mo. App. 605; Defiance Water Co. v. Olinger, 54 Ohio St. Rep. 532, 44 N. E. Rep. 238, 32 L. R. A. 736.

In Montana it is held that the fact that one knew of the dangerous condition of a dam, and failed to institute special proceedings provided by the Act of Feb. 16, 1877, giving persons living on a stream below a dam, who deem the same insecure, the right to institute proceedings to have the dam declared dangerous, will not bar an action by him for damages caused by a subsequent breaking of the dam. Hollenbeck v. Dingwell, 16 Mont. 335, 40 Pac. Rep. 863, 50 Am. St. Rep. 502, the Court saying: "It would be likewise a bad precedent to exonerate the defendants, otherwise clearly negligent, because a settler below them did not avail himself of the statutes quoted, which, as we have said, were a permission expressly accorded to him, but certainly were never intended to shield those who were careless from liability in damages for the consequences of negligently maintaining a fearful danger to those lawfully occupying their homes below the point of such danger."

See, also, Frederick v. Hale, 42 Mont. 153, 112 Pac. Rep. 70.

3 3 Farnham on Waters and Water Rights, Sec. 982.

cape will be slight, while in other cases the attempt to store is attended with such imminent danger, and the result of a breaking away of the water would be so disastrous, that the one attempting the storage may well be required to take all the risk of the enterprise. Therefore, no rule can be stated which will be applicable to all cases, but the extent of liability must be determined from the circumstances of each case as it arises."

Again, a distinction must be made as to the ordinary care which must be exercised in the construction and maintenance of dams and reservoirs and the construction and maintenance of ditches and canals, the damages caused by which we will discuss in following sections.[4] It is generally held that the owners of ditches and canals, even in those States which by legislative enactment the liability for injuries from the escape of water from reservoirs is fixed,[5] are held only to the exercise of ordinary care. This follows the rule that the greater the risk the greater is the care which must be exercised. As was said in a recent Colorado case, in discussing this distinction: "A ditch carrying water can, by the exercise of ordinary care, be rendered harmless. The carrying of water through ditches is not a dangerous or menacing vocation—the water is not restrained and the pressure is but slight—while in a reservoir, the water is restrained and the pressure is very great, so great that the exercise of the greatest amount of care and skill may not prevent the water from effecting its escape."[6]

So, in applying the rule of negligence or ordinary care to reservoir and dam cases, and in all cases where barriers are placed in natural streams to hold back their waters, the courts hold that a much greater degree of care must be exercised than is the rule in ditch and canal cases. The one, storing water under pressure, must exercise such a degree of skill in each case in the construction and maintenance of his works as is commensurate with the magnitude of the undertaking. They must be so constructed by such engineering skill as to withstand ordinary and extraordinary floods, and are not relieved from liability for damage caused by their breaking away, except such as comes strictly within the terms of act of God or *vis major*. This was the rule adopted by the United States Circuit Court of Appeals in what are known as the Salton Sea

[6] Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79, 1 Water and Min. Cas. Ann. 610.

cases,[7] where an irrigation company constructed the intakes from the Colorado River into its canal without headgates or other means of controlling the flow, by reason of which, in a time of flood, the water flowed through in such a volume as to wash away the river bank and overflow the lands of others, and for which damages were awarded, and where the Court said: "The fact that an extraordinary flood came down the river, contributing to the disaster, does not relieve the defendant from responsibility. Under the conditions prevailing in that locality and known to have existed for many years, it was the duty of the defendant to have maintained proper control of the waters at its headgates"; quoting Kinney on Irrigation, First Edition, Section 314, which is as follows: "It is the duty of all irrigation companies in building ditches, canals, aqueducts, reservoirs, and other works, to so construct them that so far as human foresight can reasonably determine the lives and property of the people living below them will be safe from breakage and overflow. Where a company constructs a ditch which passes over the land of others it is bound to construct it and use it so as not to injure those lands regardless of the question as to who has the older right or title; and if through any fault or neglect of the owner of the ditch in not properly constructing, managing, and repairing the ditch, the water overflows or breaks through the banks, and destroys or damages the lands of others, either by washing away the crops or soil, or covering the land with sand or debris, the owner of the ditch is liable for such injury. However, the owners of the ditch or canal may not be held liable for what is known as an act of God, unless the acts of the owner are combined with it in such a manner as to render him liable."[8] And, again, as was held in a recent

7 California Dev. Co. v. New Liverpool Salt Co., 172 Fed. Rep. 792, 97 C. C. A. 214.

8 And also quoting Kinney on Irr., 1st Ed., Sec. 315.

In the case of Defiance Water Co. v. Olinger, 54 Ohio St. 532, 44 N. E. Rep. 238, 32 L. R. A. 736, where the Court held that the common law rule as laid down in Rylands v. Fletcher was the correct rule of liability without proving negligence, but because the defendant had expressly pleaded negligence, in the failure to make repairs, the case was decided upon that theory, and that one who collects water on his own premises liable to escape, and, if it should escape, likely to cause mischief, must at least use reasonable care to restrain it. If for want of such care it escapes and injures persons or property rightfully on adjoining premises, he is answerable for damages sustained on account thereof.

Oregon case:[9] "The true test, considering all the circumstances, is, ought a competent and skillful engineer reasonably to have anticipated such a flood as caused the damage to the plaintiff and to have made provisions therefor?" But even this rule is not as strong as that laid down in the Salton Sea cases, as even competent engineers are liable to mistakes. In that case the Court held that it was the absolute duty of the defendant to have maintained proper control of the water at its headgates, and the fact of extraordinary flood did not relieve the defendant from responsibility.[10]

Floods that are of periodical occurrence must be guarded against by the ditch owner, as it is possible to take precautions against floods of this nature.[11]

Upon the other hand, where the owner is not made the insurer by statute, there is no liability from floods, except for negligence or want of reasonable care.[12]

**§ 1671. Liability fixed by statute—Damages caused by the breakage of works.**—The ninth section of the Act of Congress of July 26, 1866,[1] provides: "But whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such in-

9 Price v. Oregon R. Co., 47 Ore. 350, 83 Pac. Rep. 843.

10 See, also, Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596, where the Court held that in reservoir cases the owners were held to the strict rule of liability, but in ditch or canal cases the owners were held only to ordinary or reasonable care.

11 The Salton Sea Cases, 172 Fed. Rep. 820, 97 C. C. A. 242; Burbank v. West Walker River Ditch Co., 13 Nev. 431; Fairbury v. Chicago etc. Co., 79 Neb. 854, 113 N. W. Rep. 535, 13 L. R. A., N. S., 542.

12 Proctor v. Jennings, 6 Nev. 83, 3 Am. Rep. 240, 4 Morr. Min. Rep. 265; Mathews v. Kinsell, 41 Cal. 512; Lisonbee v. Monroe etc. Co., 18 Utah 343, 54 Pac. Rep. 1009, 72 Am. St. Rep. 784; Town of Jefferson v. Hicks, 23 Okla. 684, 102 Pac. Rep. 79, 24 L. R. A., N. S., 214.

In an early case in California of Todd v. Cochell, 17 Cal. 97, in an action for damages for the breaking of a small reservoir, the Court instructed the jury that to entitle the plaintiff to recover, it must appear that the breaking of the reservoir resulted from gross negligence of the defendants. This instruction was held erroneous, but the Court held that it was cured by other instructions.

1 Rev. Stat. of U. S., Sec. 2339; 7 Fed. Stat. Ann., 1905, p. 1090; 2 U. S. Comp. Stat., 1901, p. 1437; 14 Stat. L. 253.

For construction of above section, see Secs. 611-619, 933, 934.

jury or damage shall be liable to the party injured for such injury or damage." And, under the Right of Way Act of March 3, 1891,[2] the clause quoted above was re-enacted. This section has been generally construed as referring only to the injuries resulting "in the construction" of such works and not as fixing the liability for the breakage of such works after the same were constructed.[3]

In Colorado and Wyoming it is provided that the owners of reservoirs shall be liable for all damages arising from leakage or overflow of the waters therefrom, or by floods caused by the breaking of the embankments of such reservoirs.[4] This section is held to be simply an affirmation of the common law rule, discussed in the previous section.[5] This rule has been upheld as constitutional by the courts, which also hold that the liability was sufficiently absolute, as imposed by its terms, to relieve the plaintiff in an action for damages from alleging and proving negligence.[6] And it is also

2 6 Fed. Stat. Ann., 1905, p. 508; 2 U. S. Comp. Stat., 1901, p. 1570; 26 Stat. L. 1102.

For the construction of the above section, see Secs. 938-940.

3 See McGuire v. Brown, 106 Cal. 660, 39 Pac. Rep. 1060, 30 L. R. A. 384; Prentice v. McKay, 38 Mont. 114, 98 Pac. Rep. 1081; Culbertson etc. Co. v. Olander, 51 Neb. 539, 71 N. W. Rep. 298; Clear Creek etc. Co. v. Kilkenny, 5 Wyo. 38, 36 Pac. Rep. 819; Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504; Noteware v. Stearns, 1 Mont. 311, 4 Morr. Min. Rep. 650; Jacob v. Day, 111 Cal. 571, 44 Pac. Rep. 243.

5 See Sec. 1669; Sylvester v. Jerome, 19 Colo. 128, 34 Pac. Rep. 760; Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79, 1 Water and Min. Cas. Ann. 610; Canyon City etc. R. Co. v. Oxtoby, 45 Colo. 214, 100 Pac. Rep. 1127.

See, also, Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596, where the plan for the construction of an irrigation canal resulted in the creation of an extensive basin, wherein a large body of water was artificially collected and stored, it was held that such basin constituted a reservoir, within Rev. St. 1899, Sec. 947, declaring that owners of reservoirs shall be liable for all damages arising from leakage or overflow of the waters therefrom, or by floods caused by the breaking of embankments thereof.

6 "It would be a gross abuse of the judicial power to construe away the words of the statute by holding the owners of reservoirs exempt from liability for damages, upon their proof of the exercise of reasonable care and caution." Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79.

See, also, Larimer County D. Co. v. Zimmerman, 4 Colo. App. 78, 34 Pac. Rep. 1111; Sylvester v. Jerome, 19 Colo. 128, 34 Pac. Rep. 760; Canyon City etc. R. Co. v. Oxtoby, 45 Colo. 214, 100 Pac. Rep. 1127; Mustang etc.

held in a recent case that the liability is the same, even if they have used a natural hillside as a part of the restraining wall and it washes out.[7]

As we stated in the previous section, we believe this to be the correct rule fixing the liability of all who construct dams and reservoirs for the purpose of holding back and storing water.[8] So, where the courts of a State hold that such a company is absolved from liability by showing that it exercised reasonable care in the construction and maintenance of such works, or worse, before a party injured by the breaking of such works can recover damages that he must prove actual negligence upon the part of the owners of such works, a similar statute to the above should be enacted by the legislature.

**§ 1672. Liability for negligence—Damages from ditches and canals.**—But the strict rule of liability, as laid down in the cases of dams and reservoirs, and discussed in the previous sections,[1] is not usually applied to ditches and canals, where the water is under no, or comparatively little, pressure. The carrying of water through ditches and canals is not a dangerous or menacing undertaking, and, by the exercise of ordinary or reasonable care, it can be rendered comparatively harmless.[2] And, therefore, even the English courts, which hold the owners of reservoirs to the strict liability for the damages caused by water escaping from such reservoirs without proof of negligence,[3] do not hold the same rule of liability in the cases of water escaping from ditches and canals, upon the ground that it is not so liable to escape except in case of actual negligence, and, if the water does escape it is liable to do little injury, as com-

Co. v. Hissman, 49 Colo. 308, 112 Pac. Rep. 800, where only the measure of damages was considered.

7 Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79, 1 Water and Min. Cas. Ann. 610.

8 See Sec. 1669.

1 See Secs. 1669-1672.

2 Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79, 1 Water and Min. Cas. Ann. 610; Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596, where a sharp distinction is drawn as between the liability in reservoir and ditch cases.

See, also, Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795, holding that the ditch owners are not insurers, although in reservoir cases in the same State it is held that under the statute they are insurers.

For liability in reservoir cases, see Secs. 1669-1672.

3 For the English rule as to reservoirs, see Sec. 1669.

pared with that when the escape is from a reservoir.[4] Therefore, in applying the rule of negligence or ordinary care to ditch and canal cases, the courts hold that it is the duty of the owners thereof to exercise in their construction, maintenance, or operation, only such a degree of care, which ordinarily prudent men would exercise under like circumstances were the *risk* their own. And, that, in order to recover damages for injuries from the escape of the water from such works, the plaintiff must allege and prove negligence upon the part of the owners, or at least the want of ordinary care. In other words, the owners of an irrigation canal or ditch are not liable as insurers, for injuries sustained to adjoining property by seepage, leakage, or overflow from the canal or ditch, but are only liable for such injuries in case of actual negligence.[5]

[4] Boughton v. Midland etc. R. Co., Ir. Rep. 7 C. L. 169; Nield v. London etc. R. Co., 10 Exch. 4, 23 Week. Rep. 60, 44 L. J. Exch. N. S. 15.

[5] "The well settled rule is that the owner of an irrigation ditch is bound to exercise reasonable care and skill to prevent injury to other persons from such ditch, and he will be liable for all damages occurring to others as a result of his negligence or unskillfulness in constructing, maintaining, or operating the ditch." Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596.

A person may recover for damages sustained by reason of the mismanagement of a canal, which damage resulted from defective waste gates, or from opening them to relieve the canal from an over supply of water, or from neglect in keeping the canal in proper repair, which resulted in seepage of the water. Stuart v. Noble D. Co., 9 Idaho 765, 76 Pac. Rep. 255.

A ditch owner is bound to keep his ditch in good repair, so that the water will not overflow or break through its banks, or destroy or damage lands of other parties; and, if through any fault or neglect of his in not properly managing and keeping it in repair, the water does overflow or break through the banks of the ditch and injure the lands of others, either by washing away the soil or covering the soil with sand, the law holds him responsible. Richardson v. Kier, 34 Cal. 63, 91 Am. Dec. 681, 4 Morr. Min. Rep. 612.

An instruction, in an action for damages from the breaking of an irrigation ditch, that it is incumbent on an irrigation company to construct its flumes and ditches in such a reasonable and prudent manner that no damages shall result to the person, whose lands are crossed, is erroneous, as making it an insurer. King v. Miles City etc. Co., 16 Mont. 463, 41 Pac. Rep. 431, 50 Am. St. Rep. 506.

A corporation, to supply water to its stockholders for irrigation and domestic purposes, is not an insurer, and is only liable for injuries caused by its works when guilty of negligence, which must be pleaded and proved. Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828.

A corporation which constructed an irrigation plant so as to obstruct the

And, in this connection negligence may be defined as the omission to do something which a reasonable man, guided by those

natural drainage from plaintiff's land was held not relieved from liability from a resulting flood by the fact that it employed a competent engineer to superintend the construction of its works. Barstow Irr. Co. v. Black, 39 Tex. Civ. App. 30, 86 S. W. Rep. 1036.

However, in Canada, it is held that where the statute authorized an owner of land to divert unrecorded and unappropriated water from any stream for the purpose of irrigating his land, it was held that such right was permissive and not imperative, and that he was liable to adjoining owners for injury done their lands, even in the absence of negligence upon his part. Canadian P. R. Co. v. Parke, 68 L. J. P. C. N. S. 89.

considerations which ordinarily regulate the conduct of human affairs would do, or doing something which a prudent and reasonable man would not do. Moreover, negligence is not absolute or intrinsic, but always relative, and depends upon the circumstances of time, place, or person, or other facts surrounding each particular case. And, upon the subject of the standard of care in such cases, it may be said: "The legal test of negligence, whether negligence be conceived as a sort of legal or moral delinquency, or whether it be conceived as a breach of implied duty, is this: Did the defendant, in doing the alleged negligent act, use that reasonable care and caution which an ordinarily prudent person would have used in the same situation? If not, he is guilty of negligence. Stated in another way, conduct is said to be negligent when a prudent man in the position of the tort feasor would have foreseen that a harmful effect was sufficiently probable to warrant his foregoing the conduct or guarding against its consequences."[6]

It is the duty of the ditch owner to keep his ditch in such a condition that the water therefrom will not cause a breach in it and flood the adjoining property.[7] In most of the States this duty is fixed by statute, and any failure to comply with the same is deemed negligence.[8] But negligence can not be presumed from the mere fact of the breaking of the ditch or canal, without other evidence, so as to shift the burden of proof upon the defendant to relieve himself from negligence.[9] But in a late Washington case,[10] it was held that the rule of *res ipsa lognitor* does apply to the breaking of an irrigation ditch, and that this rule, like all other rules of evidence, must be applied with reference to the particular case.

Puchta, 33 Cal. 310, 12 Morr. Min. Rep. 39; Parker v. Larsen, 86 Cal. 236, 24 Pac. Rep. 989, 21 Am. St. Rep. 30; Parker v. Gregg, 136 Cal. 413, 69 Pac. Rep. 22.

[6] Street on Foundation of Legal Liability, Vol. 1, p. 96.

[7] Where the defendant permitted a break in his ditch to remain unrepaired for three weeks, whereby plaintiff's land was flooded, such conduct was held negligence *per se*. Catlin etc. Co. v. Best, 2 Colo. App. 481, 31 Pac. Rep. 391.

[10] Dalton v. Selah Water Users' Association, —— Wash. ——, 122 Pac. Rep. 4.

In summing up the principles of law applicable to ditch and canal cases, as decided almost unanimously by the authorities, we find the following: First, the owner of a ditch or canal is not an insurer against damages which may result from its construction, maintenance, or operation. Second, the owner of a ditch or canal, where his negligence or unskillfulness in the construction, maintenance, or operation of the same is sufficiently established, or his want of reasonable and ordinary care, is liable in damages for injuries resulting from breakage and overflow, leakage, seepage, or the escape of the water in any manner upon the lands and premises of others, if without fault of the land owner himself,[11] or due to an act of God or *vis major*.[12]

**§ 1673. Injuries from ditches and canals—Actions for damages lie when.**—The conveyance of water from the natural streams to the place of use for all beneficial purposes, being a legitimate and most necessary enterprise, especially in the Western portion of this country, and protected and encouraged by the law to the fullest extent possible, and the liability of ditch owners for damage from overflow, leakage, seepage, or the escape of the water in any manner, depending upon the negligence of the ditch owner,[1] and the actual injury caused thereby, there is, therefore, no liability imposed upon the owner of a canal or ditch, existing by lawful authority, for damages resulting from the mere existence of a ditch or canal, *ipso facto*.[2] In order for the plaintiff to recover damages in ditch and canal cases not only must there have been actual injuries, but those injuries must have been caused by some negligent act upon the

1 See Sec. 1672.

2 A ditch existing by lawful authority, its proprietors are not liable for damages resulting from such existence of the ditch *ipso facto*. Platte & Denver D. Co. v. Anderson, 8 Colo. 131, 6 Pac. Rep. 515.

See, also, City of Denver v. Mullin, 7 Colo. 345, 3 Pac. Rep. 693; Walley v. Platte & Denver D. Co., 15 Colo. 579, 26 Pac. Rep. 129; Gibson v. Puchta, 33 Cal. 310, 12 Morr. Min. Rep. 227.

The maintenance of ditches and canals, or other works, is not in and of itself a nuisance. Bliss v. Grayson, 24 Nev. 422, 56 Pac. Rep. 231.

See, also, Fresno v. Fresno etc. Co., 98 Cal. 179, 32 Pac. Rep. 943; Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795; Boise City v. Boise City Canal Co., 19 Idaho 717, 115 Pac. Rep. 505.

part of the ditch owner.[3] But, when these two elements are present in any case, and properly alleged and proven,[4] the plaintiff should recover damages against the ditch owner, regardless as to who he may be, and also against his servants and agents whose acts jointly contributed to his injuries.[5] A recovery may be had for injuries to the person, as well as for injuries to property, or for the death of a person.[6] Damages may also be recovered for injuries to personal property, such as horses or cattle, as well as for injuries to land.[7] So, again, damages may be recovered for injuries to growing crops.[8]

It was also held that a notice or warning to the ditch owner of certain defects in his works is sufficient to fix him with negligence if he remains inactive and permits the damages thereafter to occur.[9] Where a right of way has been granted to a ditch owner over the lands of others, either by deed or by condemnation proceedings, damages may be recovered for injuries resulting from the negligent maintenance of the ditch.[10] Although an owner of a ditch may acquire an easement for the same by prescription,[11] he can not acquire a prescriptive right to be negligent in the maintenance of his

In condemnation proceedings all damages, present and prospective, that are the natural, necessary, or reasonable incident of the improvement must be assessed, not including such as may arise from negligent or unskillful construction or use thereof. Denver etc. Co. v. Middaugh, 12 Colo. 434, 21 Pac. Rep. 565, 13 Am. St. Rep. 234.

[11] For the acquisition of rights of way by prescription, see Secs. 1044, 1045.

ditch, however long he may have been guilty of it; nor can he excuse his negligence by showing the custom used by other companies in repairing their ditches at the same time and in the same manner.[12] A person can not recover damages for a public nuisance, unless he has actually suffered damages peculiar to himself.[13]

**§ 1674. Damages for flooding lands from overflow and leakage from works.**—Coming down to the results of negligence in the handling of waters, or the actual injuries themselves, we find that one of the most common causes of action for damages is for the flooding of lands by the escape of water from canals, ditches, or other works, by overflow or leakage therefrom. And, upon this subject, it is the general duty of the owners of all such works to carefully construct and maintain the embankments so that the water will not escape to the injury of adjoining property. But, with the exception of the owners of reservoirs, as discussed in a previous section,[1] the owners of other works are not liable as insurers, for injuries sustained to adjoining property from overflow and leakage from such works, but are liable only for injuries which are the direct results of the negligence of such owners, in the construction, maintenance, or operation of the same.[2] So, in the case of the construction of a canal, where no care was taken to prevent leakage, except an endeavor to tramp the earth solid by teams, such construction was held to constitute negligence.[3] In actions of this

12 Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829.

13 "Of course the plaintiff can not recover damages for a public nuisance so far as the injury is to the public only, but if he suffers damage peculiar to himself, as by flooding his land and thereby depriving him of the use of it, the nuisance is to that extent a private nuisance as to him for which he may recover damages." Grigsby v. Clear Lake Water Co., 40 Cal. 396.

1 See Secs. 1669-1671.

2 For liability for damages from ditches and canals, see Sec. 1673.

3 Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596.

See, also, Platte & Denver D. Co. v. Anderson, 8 Colo. 131, 6 Pac. Rep. 515; Denver City etc. Co. v. Middaugh, 12 Colo. 434, 21 Pac. Rep. 565, 13 Am. St. Rep. 234.

A corporation owning a ditch or canal is not liable for the acts of one to whom it has granted the right to manage the ditch for a definite period of time and whose conduct is not under its control, and when the injury claimed was during the latter's man-

nature the principle of actual compensation governs, and the damages awarded must be confined to the actual damages sustained as the results of such negligence.[4] But a canal or ditch owner is not an insurer against all damages caused by his works. Therefore, an instruction that "It is incumbent upon the defendant company to construct its flumes and ditches in such a reasonable and prudent manner as that no damage shall result to the person whose lands are crossed by the ditch," was held erroneous.[5] He is liable only for such injuries as are caused by his negligence.[6] And, in order

6 See Secs. 1673; Colorado etc. Co. v. Morris, 1 Colo. App. 401, 29 Pac. Rep. 302, where there was no evi-

for the plaintiff to recover, he must not have contributed to the injuries in any manner.[7] A riparian proprietor who interferes with the flow of a natural stream by the construction of works, so that the water floods the lands of others is liable for the actual damages incurred.[8]

It is also an act of negligence upon the part of an appropriator who diverts water into his ditches and canals, and who either permits the surplus water, or the water after it has been used, to flow away from his works over the land of others to their injury. The one diverting water from a stream must provide adequate means for the drainage of the unused or surplus water through some outlet by the means of which it can be either returned to the natural stream or pass away without doing injury to the lands of others; and, if he does not do so, he is liable for the damages sustained.[9]

It is held that a ditch owner is not liable for damages from leakage, caused by the burrowing of some animal, unless after notice he should negligently permit the same to continue.[10]

dence as to which of two companies caused the injury.

7 For contributory negligence as a defense, see Sec. 1688.

8 A proprietor of land over which surface water is wont to flow in two or more channels may not collect such water into a single channel and discharge the aggregate volume upon the land of a lower proprietor, to the detriment of the latter. Humphreys v. Moulton, 1 Cal. App. 257, 81 Pac. Rep. 1085.

See, also, Hartshorn v. Chaddock, 135 N. Y. 116, 31 N. E. Rep. 997, 17 L. R. A., 426.

Rep. 523; Richardson v. Kier, 37 Cal. 63, 91 Am. Dec. 681, 4 Morr. Min. Rep. 612; North Point Consolidated Irr. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607.

In a recent case in Colorado, where plaintiff was entitled to the unobstructed use of waste water as the same should be discharged into her ditch at the terminus of a particular lateral connected with an irrigation system of a water company, it was held that the defendants could not wilfully and maliciously discharge water as waste and at the same time invoke the rule that they were not bound to maintain conditions so as to supply plaintiff's appropriation of waste water at any time or in any quantity. Green Valley D. Co. v. Schneider, 50 Colo. 606, 115 Pac. Rep. 705.

10 Tenney v. Miners' Ditch Co., 7 Cal. 335, 11 Morr. Min. Rep. 31; Greeley etc. Co. v. House, 14 Colo. 549, 24 Pac. Rep. 329.

**§ 1675. Damages from seepage of water.**—The seepage of water from ditches, canals, or other works, is but one method of its escape from such works. Therefore, the same duty devolves upon the owner of such works to so construct them as far as possible so that the water will not seep or percolate therefrom to the injury of the lands of others below. The law upon this subject and that of overflow and leakage, discussed in the last section,[1] is tersely expressed in the legal maxim, *Sic utere tuo ut alienum non laedas*, which expressed in English and applied to the subject under discussion, is: "The owner of such works must so use, maintain, and operate his works as not to injure the property of another."[2] And, as in other cases, the owner is held not to be the insurer against all damages incurred, he is held liable in damages for all injuries which are the direct and proximate result of his actual negligence, or the failure to exercise ordinary and reasonable care.[3] And, therefore, it is held that, if a ditch owner negligently permits water to escape onto the land of another, because of defects in the ditch, or allows the flow of the water to be obstructed so as to cause it to seep or percolate through the ditch and injure the land, the owner is liable in damages for such injuries; the injury not being *damnum absque injuria*.[4] It is held to be the duty of ditch and canal com-

1 See Sec. 1674.

2 Parker v. Larsen, 86 Cal. 236, 24 Pac. Rep. 989, 21 Am. St. Rep. 30.

3 The owner of an irrigation ditch, seepage of the water from which, not intentionally caused, injures the property of another, is liable for the injury only in case of negligence. Fleming v. Lockwood, 36 Mont. 384, 92 Pac. Rep. 962, 14 L. R. A., N. S., 628, 13 Am. & Eng. Ann. Cas. 263.

See, also, Howell v. Big Horn Basin C. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596, where it is said: "The failure to specifically require the observance of care in constructing and guarding the bottom of a ditch can not be regarded as an exemption from liability, should damage be caused through negligence in that respect."

"But assuming, under our constitution and legislative enactments, the owners of canals are liable for damages to distant proprietors occasioned by waters seeping therefrom, although not negligent in their construction or operation, they are not insurers, and have never been so held by this Court." Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795.

See, also, Malmstrom v. People's Drain D. Co., 32 Nev. 246, 107 Pac. Rep. 98.

4 Paolini v. Fresno etc. Co., 9 Cal. App. 1, 97 Pac. Rep. 1130.

See, also, Sylvester v. Jerome, 19 Colo. 128, 34 Pac. Rep. 760; Shields v. Orr Ext. D. Co., 23 Nev. 349, 47 Pac. Rep. 194; Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829;

panies to take care of their own seepage and percolating waters. And, where this may be done by the construction of a "sweat" ditch, it is held to be negligence not to construct such a ditch.[5] But there is no duty imposed upon the party injured to construct such a ditch to avoid the injury.[6]

It often happens that the irrigation of upper lands has the effect of causing seepage to the lands of those lying below. Here, again, the liability of the upper owner for damages resulting from such seepage depends upon his negligence, as is the case where the seepage is directly from the ditches or canals, discussed above. And, when the lower land becomes soaked and too wet from the seepage from irrigated lands, the upper land owners can not be held liable, when they use ordinary and reasonable care in the irrigation of their lands, and when they use no more water than is reasonably necessary in so doing.[7] But the land owner who, in irrigating his land, uses more water than is necessary, and permits the water to form in pools thereon, and from thence to seep and percolate to his neighbor's land, is guilty of negligence and is liable for the injuries sustained.[8]

Negligence being the gist of such actions, the plaintiff has the

burden of proof, in the first instance, to prove negligence on the part of the defendant.[9]

It is held in Colorado that injuries to land from water seeping from a properly constructed irrigation ditch which is maintained to be permanent constitutes a single cause of action, and as affected by the statute of limitations accrues at the beginning of the injury.[10]

**§ 1676. Damages for the flowage or backing up of water.**—One of the results of the placing of dams or other obstructions in natural streams is the flowage or the backing up of the waters so that they cover the lands above such obstructions. Flowage is usually governed by statute, and where the use to which the water is to be put is a public one, the right to acquire such land as may be necessary is given by virtue of the power of eminent domain, upon just compensation.[1] Such a right may also be acquired by grant or prescription.[2] But, where the flowage covers the lands of others, over which the party constructing such works has no right, such party is liable for the injuries caused thereby. So, again, where a party has the right to a certain amount of flowage land, and reconstructs his works so that other lands are flooded, he is liable for the additional injuries incurred thereby.[3] To render one liable for damages in such cases it is sufficient if the obstruction was such that a reasonably prudent man would know that it would be likely to do injury by the backing up of the water, and would have taken

[9] Fleming v. Lockwood, 36 Mont. 384, 92 Pac. Rep. 962, 14 L. R. A., N. S., 628, 13 Am. & Eng. Ann. Cas. 263; Greeley Irr. Co. v. House, 14 Colo. 549, 24 Pac. Rep. 329.

[10] Middlekamp v. Bessemer Irr. Ditch Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795.

[1] For the right of eminent domain, see Secs. 1059-1098.

The flowing of land by a dam for manufacturing purposes is a taking within the meaning of the constitutional provision regulating the taking of land by right of eminent domain. Avery v. Vermont Elec. Co., 75 Vt. 235, 54 Atl. Rep. 179, 59 L. R. A. 817, 98 Am. St. Rep. 818.

For the defense of prescription, see Sec. 1690.

For the defense of a contract right to flow land, see Sec. 1689.

[2] See Secs. 1659-1698.

[3] Greeley Irr. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985.

See, also, Charnley v. Shawano etc. Co., 109 Wis. 563, 85 N. W. Rep. 507, 53 L. R. A. 895, and note; Avery v. Vermont Elec. Co., 75 Vt. 235, 54 Atl. Rep. 179, 59 L. R. A. 817, 98 Am. St. Rep. 818, and note; McCombs v. Stewart, 40 Ohio St. 647; Fredericks v. Pennsylvania Canal Co., 148 Pa. 317, 23 Atl. Rep. 1067.

the precaution to guard against it.[4] Therefore, where a party constructs a permanent dam across a stream, the effect of which can be but apparent that it will back up the water over the lands of others to which he has no right, it must be presumed that he intended the natural consequences of his act, and he will be therefore charged with notice of whatever conditions resulted from the same, and liable for the injuries caused thereby, without the proof of negligence upon his part in the construction of such works.[5] Where, however, there are but partial obstructions placed in a stream, which, upon all ordinary occasions, will permit the water to pass down as it was wont, as is the case of bridges and culverts, the party owning such works is liable only for such injuries as reasonably might have been foreseen by persons skillful and competent to construct such works in accordance with the demands of the physical conditions of each particular case.[6] But the owner of such works is not bound to provide against unusual and extraordinary floods such as come within the terms of "act of God," or "inevitable accident." And whether or not such floods do come within the meaning of such terms is a question of fact to be submitted to the jury.[7]

Where certain expert witnesses testified that a dam is a given elevation above sea level, and that it did not, and could not hold back flood waters, and cause the overflow above that elevation, and other witnesses saw the lands at the time of high or flood season,

[4] Schmeckpepper v. Chicago etc. R. Co., 116 Wis. 592, 93 N. W. Rep. 533.

He will be liable even though the work may have been performed with reasonable care and skill. Selden v. Delaware etc. Co., 24 Barb. 362.

Piott, 131 Ala. 312, 31 So. Rep. 33; Ohio etc. Co. v. Thillman, 143 Ill. 127, 32 N. E. Rep. 529, 36 Am. St. Rep. 539.

and testified that they actually were flooded and submerged to a higher elevation than that testified to by the expert witnesses, there is such a substantial conflict in the evidence as to go to the jury.[8]

**§ 1677. Damages for flooding lands by the interference with the flow of surface waters.**—As to whether or not an action at law will lie for damages resulting from the interference with the flow of what are strictly surface waters,[1] depends largely upon the fact as to whether the common law or the civil law has been adopted as the rule of decision in the jurisdiction where the action is brought. According to the rule of the common law, as accepted in England and in many of the States of this country, surface water may be regarded as a common enemy which every land owner may fight and get rid of as best he may, and for which acts no action for damages will lie, the same being *damnum absque injuria.*[2] Under this

8 Petajaniemi v. Washington W. Pr. Co., —— Idaho ——, 124 Pac. Rep. 783.

1 As to what constitutes surface waters, see Sec. 318.

2 "At common law, for the purpose of drainage, construction, or any other lawful purpose, every proprietor had the right to elevate the surface of his own land, or to erect embankments whereby the natural flow of the water from the upper ground shall be stopped, without liability." Chicago etc. Co. v. Groves, 20 Okla. 101, 93 Pac. Rep. 755, 22 L. R. A., N. S., 802.

An obstruction by a railroad embankment of the ordinary ditches and passageways which surface water will cut in a generally level district in its efforts to reach some flowing stream does not constitute an injury to other land owners, where the common law is recognized as the rule of practice and decision, and there are no special statutory provisions in respect to the matter. Walker v. New Mexico etc. Co., 165 U. S. 593, 41 L. Ed. 837, 17 Sup. Ct. Rep. 421; affirming *Id.*, 7 N. M. 282, 34 Pac. Rep. 43.

"Under this rule it is within the control of the owner of any land upon which it falls or over which it flows. He may use all of it that comes upon his own, or decline to receive any that falls on his neighbor's land. . . . The doctrine of the common law with respect to the obstruction and flow of mere surface water is not only in force in England, but in Connecticut, Indiana, Massachusetts, Missouri, New Jersey, New Hampshire, New York, Vermont, and Wisconsin. . . . The rule of the civil law seems to be in force in Pennsylvania, Iowa, Illinois, California, Louisiana, and referred to with approval in Ohio." Kansas City etc. Co. v. Riley, 33 Kan. 374, 6 Pac. Rep. 581.

See, also, Greatrex v. Hayward, 8 Exch. 291, 22 L. J. Ex. 137; Wood v. Waud, 3 Exch. 748, 18 L. J. Exch. N. S. 305, 13 Jur. 472; Broadbent v. Ramsbotham, 11 Exch. 602, 25 L. J. Ex. N. S. 115, 4 Week. Rep. 290,

rule, not only may a land owner get rid of mere surface water by casting it upon the lands of others, but he may also appropriate the same to his own use for any purpose, or for the express purpose of depriving an adjoining land owner of it,[3] and any person from whose land it is withheld, and whose supply is depleted thereby, will have no right of action for damages for such diversion or obstruction.[4]

In distinction from the common law rule upon the subject, discussed above, the doctrine of the civil law is, that each of the owners of both the upper and lower estates has a natural easement or servitude in the estate of the other for the flow of mere surface water as it was wont to flow by nature. Therefore, the lower owner can not reject the water as it naturally comes to his land, from the land of the upper owner, by interposing obstructions or barriers against the same; and, upon the other hand, the upper owner can not entirely withhold the supply that would naturally flow to the lands of the lower owner. But, under the American decisions, it is held that either land owner may somewhat interfere with the natural flow of surface water, where it is needed for domestic purposes, or for use upon the land according to the ordinary modes of good husbandry.[5] And it therefore follows that, for any material interference by one party with the reciprocal rights of the other to the natural flow of the surface water, an action for damages will lie.[6]

McDonald, 21 Iowa 160, 89 Am. Dec. 563; Goldsmith v. Elsas, 53 Ga. 186; McCormick v. Kansas City R. Co., 70 Mo. 395, 35 Am. Rep. 431.

6 Interference with the natural flow of surface water is regarded as a nuisance, for which nominal damages

In the arid and semi-arid States of this country, where at times every drop of available water is needed for the proper cultivation of lands, and where it is held that there can be no appropriation of what is strictly mere surface water,[7] the courts are inclined to hold more in accordance with the rule of the civil law, which, as it seems to the writer, is more consistent with the needs and necessities of an arid region than is the rule of the common law which originated where the question was more one of drainage than of the right to use the water. Some of the Western courts, however, have adopted the common law rule. The leading State to reject the common law rule upon the subject as inapplicable, and to adopt the rule of the civil law, is California. And, in a late case upon the subject, in which damages were recovered in the trial court, by a lower proprietor against an upper for maintaining certain embankments and thereby changing the natural course of surface water, which resulted in flooding of the plaintiff's land, it is said: "It follows, therefore, that the owner of higher lands has no right, for his own relief, either to divert surface or storm waters from his lands onto the lands of another, over which they would not naturally have flowed, nor has he the right, by accumulating surface water upon his own lands in ditches or other artificial channels, to precipitate them upon his neighbor's land in larger quantities or in different form from that which they would have had or taken in the course of nature. The rule of this State is the rule of the civil law, '*Aqua currit, et debet currere, ut currere solebat,*' and we have, moreover, modified, to meet our conditions, the harsh and drastic common-law maxim of '*Cujus est solum, ejus est usque ad coelum et ad infernos,*' by applying with it the more benign and equitable rule of '*Sic utere tuo ut alienum non laedas.*'"[8] The

may be recovered without proof of actual damages. Tootle v. Clifton, 22 Ohio St. 274, 10 Am. Rep. 732.

Cummings, 83 Cal. 515, 23 Pac. Rep. 795, 8 L. R. A. 575; Gray v. McWilliams, 98 Cal. 157, 32 Pac. Rep. 976, 21 L. R. A. 593, 35 Am. St. Rep. 163; Los Angeles Cemetery Assn. v. Los Angeles, 103 Cal. 461, 37 Pac. Rep. 375; Rudel v. Los Angeles

rule of the civil law is adopted as the rule of decision in Montana,[9] Texas,[10] and Wyoming.[11] The common law rule is followed in Kansas,[12] New Mexico,[13] and Oklahoma.[14] In Oregon, as late as 1906, the question had not been decided.[15] This rule is adopted in Washington. As was said in a recent case:[16] "It is also the settled doctrine in this State that surface water, caused by the falling of rain or the melting of snow, is to be regarded as an outlaw or common enemy against which every proprietor of land may defend himself, even if in consequence of such defense injury result to others. As to surface waters this Court has definitely adopted the

But in the latest decision of the Supreme Court of that State, the court seems to modify the strict common-law rule by holding that the owner of land is not responsible for injuries occasioned by the flow of surface water from his land upon adjacent lands; but, if he causes it to accumulate and then casts it in a volume upon the land of his neighbor, he is responsible for the increased damages, if any, caused thereby. Johnston v. Hyre, 83 Kan. 38, 109 Pac. Rep. 1075.

15 "The question has never been decided in this State." Price v. Oregon R. Co., 47 Ore. 350, 83 Pac. Rep. 843.

See, also, West v. Taylor, 16 Ore. 165, 13 Pac. Rep. 665; Brosnan v. Harris, 39 Ore. 148, 65 Pac. Rep. 867, 54 L. R. A. 628, 87 Am. St. Rep. 649.

16 Wood v. City of Tacoma, —— Wash. ——, 119 Pac. Rep. 859.

rule of the common law as distinguished from the contrary rule of the civil law." [17]

It is held by the Supreme Court of the United States that that Court will follow the State's decisions as to the rights and liabilities respecting surface water as a matter of local law.[18]

**§ 1678. Damages for injuries to ditches or other works.**—Not only will an injunction be granted the owner in a proper case against any future unlawful interference with ditches, canals, or other works,[1] but also an action for damages will lie for any past injury to such works, committed negligently or wilfully, either by the owner of the land over which such works are constructed or by others.[2] In an early case decided by the Supreme Court of the United States, it was held that the owner of a water right who, in constructing his ditch, crosses the ditch of another person in such a way as to cut into it and carry the water down his own ditch, can not complain if the owner of the first ditch in making repairs cuts down and washes away a portion of the intersecting ditch, and it "was not, therefore, an injury for which damages could be recovered." [3] A covenant in a lease to defend the lessee in the peaceful and quiet possession of the premises and every part thereof does not require the lessor to maintain a ditch running through the premises; and therefore the lessor is not liable to the lessee for damages caused

[17] See, also, Harvey v. Northern Pacific Ry Co., —— Wash. ——, 116 Pac. Rep. 464.

But see Peters v. Lewis, 28 Wash. 366, 68 Pac. Rep. 869; *Id.*, 33 Wash. 617, 74 Pac. Rep. 815.

[18] Walker v. New Mexico etc. Co., 165 U. S. 593, 41 L. Ed. 837, 17 Sup. Ct. Rep. 421; aff'g *Id.*, 7 N. M. 282, 34 Pac. Rep. 43.

[1] See injunctions, Secs. 1596-1647.

[2] In an action for destroying plaintiff's ditch, which crossed the defendant's mine, the fact that there had been locations covering part of the mine before the ditch was constructed is immaterial when defendant's title was not connected with them, but was based upon a survey and location made after the construction of the ditch. Jacob v. Lorenz, 98 Cal. 332, 33 Pac. Rep. 119.

See, also, as to priorities, Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322; Tynon v. Despain, 22 Colo. 240, 43 Pac. Rep. 1039.

For the recovery for damages to a flume, see Jones v. Bondurant, —— Colo. App. ——, 120 Pac. Rep. 1047; Gustin v. Harting, —— Wyo. ——, 121 Pac. Rep. 522.

[3] Jennison v. Kirk, 98 U. S. 453, 25 L. Ed. 240, 4 Morr. Min. Rep. 504.

See, also, Clark v. Willett, 35 Cal. 534, 4 Morr. Min. Rep. 628; Gregory v. Nelson, 41 Cal. 278.

by the temporary destruction of the ditch by floods.[4] If one owns a ditch and a right of way for the same, a court of equity has no authority by its judgment to allow the ditch to be washed away for mining purposes, even after providing that such portion of the ditch as might be destroyed should be replaced by a metal pipe or flume which would answer all the purposes of the ditch. The court should not license a trespass on such property or compel the owner thereof to exchange the same for other property for the convenience of a private person.[5] Damages may be recovered against a railway company for changing the course of an irrigation ditch;[6] also, for the interfering with such ditch by improperly constructing a syphon to pass the water under a right of way.[7] So, also, against a corporation for unlawfully placing a dam in a river which caused the washing away of plaintiff's ditches.[8] As it is the duty of the ditch owner to keep his ditch in repair, and for this purpose he may go upon the lands of others through which the ditch runs, and for the purpose of which he has acquired in some manner a right of way, it is also his duty to protect his ditch against the invasion of cattle of the land owner; and, as a general thing, the land owner is not liable for injuries to a ditch of another passing through his land from the tramping of cattle.

It was held in Nevada that no action for damages will lie where a subsequent appropriator of water removed a portion of a dam constructed upon public land by a prior appropriator in such a manner as to divert the entire stream, and by such removal allowed a portion of the stream to continue in its natural course to the prior appropriator, where the latter did not employ a reasonable and economical method of diverting the water and where he permitted two-thirds of the water diverted to become lost in a swamp without any good excuse therefor.[9] But it was held in Oregon that the owner of

sheep can be held in damages for injuries done by them to a ditch running across the unfenced public lands, and in the absence of proof that they were purposely or negligently driven thereon.[10] It is held that the measure of damages for the permanent destruction of an irrigation ditch is the difference between the value of the land irrigated with and without the ditch.[11]

§ 1679. **Damages from logging.**—Many of the rivers and streams of the arid and semi-arid West are navigable at least to the extent that they are used for floating logs from the timber lands along their sources to the market.[1] And where a stream is of sufficient capacity to be used for this purpose, the right to its use is vested in the public. In this use, it frequently happens that the lands of the riparian owners are injured by the destruction of improvements or by the flooding or washing of their lands. As we have discussed in a preceding section, an injunction may be granted in certain cases against continuous negligent logging;[2] so, also, an action for damages will lie to recover compensation for the actual injuries sustained by the negligent acts of those using the stream for this purpose. But the one so using the stream is not an insurer that the riparian owner shall not suffer injury. One engaged in driving logs down a stream is bound to exercise ordinary prudence and skill, and where it is so exercised any injuries which may be caused by his operations will be *damnum absque injuria*.[3] But for all injuries resulting from actual negligence or the want of ordinary or reasonable care he is liable.[4]

10 Bileu v. Paisley, 18 Ore. 47, 21 Pac. Rep. 934, 4 L. R. A. 840.

11 Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322.

1 As to what constitutes a navigable stream, see Secs. 344-346.

2 See Sec. 1617.

3 "The gist of this action is negligence, and until some negligence is shown there can not be said to be any liability." Hopkins v. Butte etc. Co., 13 Mont. 223, 33 Pac. Rep. 817, 16 Mont. 356, 40 Pac. Rep. 865, 40 Am. St. Rep. 438.

See, also, Haines v. Welch, 14 Ore. 319, 12 Pac. Rep. 502; Watkinson v. McCoy, 23 Wash. 372, 63 Pac. Rep. 245; Hunter v. Grande Ronde Lum. Co., 39 Ore. 448, 65 Pac. Rep. 598; Eernert v. Eureka Lbr. Co., 43 Mont. 517, 117 Pac. Rep 1060.

See, also, Brisky v. Leavenworth etc. Co., —— Wash. ——, 123 Pac. Rep. 519.

4 Watkinson v. McCoy, 23 Wash. 372, 63 Pac. Rep. 245; Watkins v. Dorris, 24 Wash. 636, 64 Pac. Rep. 840, 54 L. R. A. 199; Bryant v. Frank

Again, damages may be recovered by one using a navigable stream for the floating of logs against the riparian owner for placing obstructions in the stream, which prevent the plaintiff from driving their logs.[5]

§ 1680. **Actions on bonds for damages.**—Where a party entitled to the use of water is prevented from exercising his right by an injunction wrongfully sued out by a party who gives a bond, an action for damages will lie on the bond for all damages which are the direct result of his being deprived of the water.[1] But it is held that damages from the issuance of a temporary injunction can not be recovered in the injunction suit itself by way of cross-complaint.[2] A bond given to an incorporated reservoir company for whatever damages might be awarded through the granting of an injunction against the distribution of water does not include damages to an individual stockholder of the company for the loss of crops, unless the company through some valid contract, made antecedently, would be compelled to make good the loss.[3] A plaintiff in an action on such a bond can not recover a greater sum in damages than he would have had to expend to obtain water from another source, from which he could have obtained a sufficient supply by a reasonable exertion. Nor can he recover more than nominal damages for the loss of his crops by being deprived by the injunction of the use of the water, where during the time the injunction was in force the water was so low that it could not have reached the plaintiff's land.[4]

§ 1681. **Damages as the result of fraud.**—It has sometimes happened that fraud has entered into the operations of certain water companies. And where this is the case, upon properly alleging and proving the fraud, and that the plaintiff acted thereon to his injury,

H. Lamb Timber Co., 37 Wash. 168, 79 Pac. Rep. 622; Lownsdale v. Grays Harbor Boom Co., 36 Wash. 198, 78 Pac. Rep. 904; Ingram v. Wishkah Boom Co., 35 Wash. 191, 77 Pac. Rep. 34; Sacchi v. Bayside Lbr. Co., 13 Cal. App. 72, 108 Pac. Rep. 885.

5 Creech v. Humptulips etc. Co., 37 Wash. 172, 79 Pac. Rep. 633.

2 Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476.

3 Eaton v. Larimer etc. Co., 3 Colo. App. 366, 33 Pac. Rep. 278.

4 Mack v. Jackson, 9 Colo. 536, 13 Pac. Rep. 542.

damages may be recovered against the party making the misrepresentations, or if these were made by a duly authorized agent, against the company of which he was the agent. So, in an action against an irrigation company for false representations of its general manager, a petition alleging that the general manager, on being applied to for information as to the location of a water right, consulted certain records, and informed the plaintiff that the water right was located on a certain tract on which there was, in fact, no water right, was held sufficient on a general demurrer in showing that the general manager held authority to make the representations complained of, which, if proven, would make the company liable in damages to the plaintiff.[1]

It has sometimes happened that the promoters of companies have sought to reap secret profits at the expense of the stockholders of the corporation which they have organized. "If, without the knowledge or consent of such stockholders, the promoters cause funds of the corporation to be so disbursed as to secure undisclosed profits to themselves, they may be called to account."[2] So, where this was attempted by one of these enterprising gentlemen, but who was frustrated in his efforts, and afterward had the assurance to bring an action against the corporation for damages to recover the "undisclosed profits," it was held that he could not recover.[3]

**§ 1682. Damages for using force.**—As we have discussed in a previous section of this work, the owner of a water right, ditch, canal, or other works, may, under certain circumstances, use a reasonable amount of force in protecting his rights. It has sometimes happened that following the use of force an action for damages has

1 Cleghon v. Barstow Irr. Co., 41 Tex. Civ. App. 531, 93 S. W. Rep. 1020. See, also, Grant v. Huschke, —— Wash. ——, 126 Pac. Rep. 416.

2 Mangold v. Adrian Irr. Co., 60 Wash. 286, 111 Pac. Rep. 173; Camden Land Co. v. Lewis, 101 Mo. 78, 63 Atl. Rep. 523.

3 Mangold v. Adrian Irr. Co., 60 Wash. 286, 111 Pac. Rep. 173.

Where a purchaser of stock of an irrigation company agreed that the corporation would convey to the sellers all water rights not theretofore conveyed to others, which it subsequently did, evidence of false representations by the sellers as to the capacity of the company's canal was not admissible in an action for failure to deliver water in accordance with the conveyance; the plaintiffs not asking for damages from such representations or a rescission of the contract not being asked by the defendants. Lombard v. Schlotfeldt, —— Wash. ——, 123 Pac. Rep. 787.

followed. Of course, if the use of force was justified and not used to excess, no damages in such an action should be recovered.[1] This force is not necessarily confined to assault and battery upon the person, but it may have been used in the removal of obstructions from a stream or ditch which prevented the water from reaching the prior appropriator,[2] or the removal of building material placed upon a right of way for an unlawful purpose.[3] Where, however, the use of force was not justified, or there was an excessive use of force, a plaintiff in an action for damages should recover.

§ 1683. **Jurisdiction of courts—Venue.**—An action for damages for injuries to a water right, or to a ditch, canal, or other works used to utilize a water right, being an action for injuries to real property,[1] the general rule is that it must be commenced, or tried, at least, in the county where the real property or some portion thereof is situated. Upon this subject, however, the constitutions and statutes of the respective States govern, and should be consulted before such an action is instituted. Where, however, an action is commenced in the wrong county, it is generally the rule that the failure of the defendant at the proper time to object to the jurisdiction of the Court, or to move for its transfer to the proper county, waives the want of jurisdiction of the trial court. In a recent case decided in California it was therein decided that the statute [2] only requires that such actions must be tried in the county where the real estate injured is situated, and that it is not required to be commenced there. And when it is commenced in a county other than the one where the real property injured is located, the Court acquires jurisdiction to try the cause, unless the defendant applies for its transfer for trial to the county where the real property is situated.[3]

3 Whitmore v. Pleasant Valley Coal Co., 27 Utah 284, 75 Pac. Rep. 748.

1 That a water right is real property, see Sec. 769.

2 Sec. 392, subd. 1, Code Civ. Proc.

3 Miller & Lux v. Madera etc. Co., 155 Cal. 59, 99 Pac. Rep. 503, 22 L. R. A., N. S., 391.

See, also, Miller & Lux v. Kern County Land Co., 140 Cal. 132, 73 Pac. Rep. 836; Grocers' etc. Union v. Kern County Land Co., 150 Cal. 466, 89 Pac. Rep. 120.

Where the property injured lies in two or more counties, the plaintiff may select the county in which the action may be commenced and tried. These rules are also subject to the provisions for the change of venue for trial in another county, as provided by the respective statutes.

Under certain conditions, as in other cases, a change of venue may be had of the trial of such an action from one county to another. In this respect the statute of the State where the action is pending must be followed, both by the moving party and by the Court. However, an application for a change of venue is addressed to the sound legal discretion of the trial court, and the decision reached by such Court on such matter will not be reversed on appeal unless the showing made is such as to convince the Appellate Court that the trial court has abused such discretion.[4]

§ 1684. **Parties plaintiff.**—The several owners of the waters of a stream, ditch, canal, or other works, as we have discussed in previous portions of this work, may unite as parties plaintiff in an action to enjoin the unlawful diversion by a third person [1] to quiet title to their respective rights [2] or to abate a nuisance; [3] but unless there is a community of interest between such parties they can not unite as parties plaintiff in an action at law for damages for past injuries to their rights, and where this is attempted there is a misjoinder of parties plaintiff.[4] So, it is held that a cause of action

4 An application for a change of venue ought to be supported by the affidavits of persons who have either been over the county generally, or through large communities thereof, and have heard the citizens generally express themselves in regard to the matter in issue, or by residents of different portions of the county who know of the sentiment prevailing in their respective communities. Gibbert v. Washington etc. Co., 19 Idaho 637, 115 Pac. Rep. 924.

1 For parties plaintiff in injunction suits, see Sec. 1631.

2 For parties plaintiff in actions to adjudicate water rights, see Sec. 1544.

3 See Sec. 1621.

4 "It has been frequently held that the appropriators and users of water from the same stream, where each owned his separate tract of land and right, could not join in an action against other appropriators and users of water from the same stream for the recovery of damages for an obstruction of their rights or an unlawful diversion of the water, to their damage or prejudice." Frost v. Alturas W. Co., 11 Idaho 294, 81 Pac. Rep. 996; citing Kinney on Irr., 1st Ed., Sec. 327.

See, also, Foreman v. Boyle, 88 Cal. 290, 26 Pac. Rep. 94; Barham v. Hostetter, 67 Cal. 272, 7 Pac. Rep. 689; Blaisdell v. Stephens, 14 Nev.

for injunction, which is common to all the plaintiffs, can not be joined with a cause of action for damages which is not joint as to all the plaintiffs, but several.[5]

Where the rights of the parties plaintiff are based upon a contract, as to whether such contract is several or joint depends upon the terms expressed in the contract itself. It is therefore a question of its construction. Generally, where there are joint obligees the contract is joint, and such obligees must join in an action for damages for the breach thereof. Where, however, the language of the contract requires the obligor to account to each of the obligees, respectively, or by the use of any words imports a separate right of action, the contract is several to the extent that each obligee may maintain an action for damages resulting from the breach of the contract.[6] So, in an Arizona case, it is held that a contract between a canal company and the shareholders in an unincorporated mutual association whereby the canal company agreed to furnish water to the "respective" parties forming the mutual association, naming them, and the latter agreed to rent their "respective" shares in the association to the first party, it was held to be a several contract, and that either of the second parties might maintain an action for damages occurring to him through a breach of the contract without joining the others.[7] Parties to a contract for cropping land on shares, each of whom owns an interest in the growing crop, are properly joined as parties plaintiff in an action for damages for the destruction of their crop.[8] In Nevada, where the law of community property is in force, where the title to land purchased with money earned after marriage is taken in the name of the wife, the land is held to be "community property" under the husband's control, so

8 Thomas v. Bolsa Land Co., 1 Cal. App. 335, 82 Pac. Rep. 207.

that an action for damages for injuries thereto from flooding and seepage may be maintained by him alone.[9]

A corporation organized to furnish water for hire or profit may maintain an action for damages against one unlawfully depriving it of the water which the corporation has obligated itself to furnish its consumers.[10] But where no obligation has been entered into to furnish the water to consumers, and the company has not been compelled to respond for the breach of a valid contract to furnish such water, it is held that a corporation can not maintain an action for damages which have been suffered by stockholders by their inability to obtain water.[11] In Oklahoma it is held that a private citizen, although a taxpayer of a municipality, can not maintain an action against a water company to recover damages for losses by fire sustained by him in consequence of the failure of the company to perform its contract with the municipality to furnish a supply of water for the extinguishment of fires, for the reason that there is no privity between the citizen and the company.[12] The mortgagee of a mortgage covering all the crops on certain land for a year is entitled to maintain an action against a water company failing to furnish water to the land as bound by its obligation to the mortgagor.[13] So, also, may an action be maintained by the pledger of water stock for damages caused by the act of the pledgee in directing a water company to withhold the water from the pledger.[14] So, again, an action for damages may be maintained by a landlord against a tenant for injuries to his rights or for the failure to make

9 Malmstrom v. People's Drain D. Co., 32 Nev. 246, 107 Pac. Rep. 98; Dimmick v. Dimmick, 95 Cal. 323, 30 Pac. Rep. 547.

10 Where it appeared that the plaintiff had undertaken to supply water to about 200 farmers, some of them at lands thirty-five miles away, and that it would be unable to perform its agreements with them if it should be deprived of the water which defendant was unlawfully taking for his own use, it was said by the Court: "Clearly, that would amount not merely to the loss of a certain amount of water for which compensation could be given in a suit for damages, but to injure the plaintiff's business so seriously as to be considered irreparable." Hagerman Irr. Co. v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

11 Eaton v. Larimer etc. Co., 3 Colo. App. 366, 33 Pac. Rep. 278.

repairs to a ditch;[15] or against a water company for failure to furnish his tenant with water.[16] A tenant may maintain an action for damages against his landlord for a breach of an agreement by the landlord to furnish the tenant with water;[17] and he may also sue as party plaintiff in an action for damages against a third party whose duty it is to furnish the land with water, but who has failed to furnish it.[18]

§ 1685. **Parties defendant—Joint or several tort feasors.**—Although in an equitable action any number of persons whose rights are invaded may join as parties plaintiff against any number of persons as parties defendant to adjudicate water rights,[1] or to prevent by injunction the unlawful invasion of rights,[2] this can not be done in an action at law for damages unless, as far as parties plaintiff are concerned, there is such a community of interest in the subject matter of the suit that it makes them practically one party,[3] or, so far as parties defendant are concerned, unless they all acted in concert or jointly, so that by their concurrent wrongdoing they caused the injuries for which damages are asked. It is a well-settled principle of law of procedure that an action at law for damages can not be maintained against several persons as parties defendant when each acted independently of the others and there was no concert or unity of design or action between them.[4] It is held

15 Hayden v. Consolidated etc. Co., 3 Cal. App. 136, 84 Pac. Rep. 422.

16 Farmers' etc. Co. v. New Hampshire etc. Co., 40 Colo. 467, 92 Pac. Rep. 290.

17 Knowles v. Leggett, 7 Colo. App. 265, 43 Pac. Rep. 154; Dunbar v. Montgomery, 119 S. W. Rep. 907.

18 Pallett v. Murphy, 131 Cal. 192, 63 Pac. Rep. 366.

1 See Secs. 1544, 1545.

2 See Secs. 1631, 1632.

3 See preceding section, No. 1684.

4 In a leading case upon this subject in Nevada, involving an action for damages against several defendants and asking for an injunction, it was held that tort feasors who "own, occupy, and irrigate separate and distinct tracts or parcels of land," and where it did not appear that the injury complained of "was the result of the joint or concurrent act of defendants," can not be held jointly liable, or be joined as parties defendant, and that a motion for a non-suit should be sustained by the trial court, so far as the cause of action for damages was concerned, although as far as the injunctive feature was concerned such a joinder was held proper. "The general principle is well settled that where two or more parties act, each for himself, in producing a result injurious to plaintiff, they can not be held jointly liable for the acts of each other." Blaisdell v. Stephens, 14 Nev. 17, 33 Am. Rep. 523.

that in such a case the tort of each defendant is several when committed, and that it does not become joint because afterward its consequences united with the consequences of several other torts committed by other persons. If the rule were otherwise, the authorities hold that one defendant, however little he might have contributed to the injury of the plaintiff, would be liable for all the injury caused by the wrongful acts of all the other defendants, and he would have no remedy against the latter because no contribution can be enforced between tort feasors.[5]

But where the parties acted in concert and by their concurrent wrongdoing jointly committed the unlawful act complained of, or the act of one causing the injury was made for the benefit of the others, who took advantage of such benefit, they are jointly and severally liable, and should be joined in an action for damages as

In a law action for damages for wrongful diversion, where no equitable relief is asked, and no facts are alleged which would authorize the granting of such relief, plaintiff can not join as defendants persons who did not act jointly in diverting the water. Miles v. Du Bey, 15 Mont. 340, 39 Pac. Rep. 313.

But see the earlier case decided by the same court as last above of Carron v. Wood, 10 Mont. 500, 26 Pac. Rep. 388, where equitable relief was asked and the verdict of the jury, "that plaintiff had suffered damage in the sum of $1,535.88 by reason of the defendants wrongfully depriving plaintiff of the use of said waters during the year 1889, which damage was apportioned against twelve defendants in divers sums, found by the jury, and set forth in the verdict," was upheld by the Supreme Court. Upon principle as set forth in the text above, and the decision in the case of Miles v. DuBey, *supra*, we believe that this decision was erroneous, although from the record as stated in the opinion no objections were made to the misjoinder of parties defendant.

See, also, Miller v. Highland etc. Co., 87 Cal. 430, 25 Pac. Rep. 550, 22 Am. St. Rep. 254; Foreman v. Boyle, 88 Cal. 290, 26 Pac. Rep. 94; Barham v. Hostetter, 67 Cal. 272, 7 Pac. Rep. 689; Miles v. DuBey, 15 Mont. 340, 39 Pac. Rep. 313; Evans v. Ross, 67 Cal. 19, 8 Pac. Rep. 88; Saint v. Guerrerio, 17 Colo. 448, 30 Pac. Rep. 335, 31 Am. St. Rep. 320; Frost v. Alturas W. Co., 11 Idaho 294, 81 Pac. Rep. 996; Mau v. Stoner, 15 Wyo. 109, 87 Pac. Rep. 434, 89 Pac. Rep. 466; Hillman v. Newington, 57 Cal. 56; People v. Gold Run etc. Co., 66 Cal. 138, 4 Pac. Rep. 1152, 56 Am. St. Rep. 80; Montecito W. Co. v. Santa Barbara, 144 Cal. 578, 77 Pac. Rep. 1113; Ronnow v. Delmue, 23 Nev. 29, 41 Pac. Rep. 1074; Watson v. Colusa-Parrott etc. Co., 31 Mont. 513, 79 Pac. Rep. 14; Hulsman v. Todd, 96 Cal. 228, 31 Pac. Rep. 39.

[5] Chipman v. Palmer, 77 N. Y. 51; Pomeroy on Remedies, Secs. 207, 308.

parties defendant.[6] Where there is a water master and he fails to apportion the water according to the decree adjudicating such rights, such water master may be joined with the consumers to whom the water was wrongfully given as a party defendant.[7]

The plaintiff in an action for damages must make the party causing the injury the party defendant.[8] Municipalities may be made parties defendant, as well as individuals or private corporations.[9]

6 "It is well settled that where two or more parties, by their concurrent wrongdoing, cause injury to a third person, they are jointly and severally liable. It is optional with the injured party to proceed against one or all of those contributing to the injury, as any one who aids and assists in committing the wrong is liable for the whole." City of Kansas City v. Slangstrom, 53 Kan. 431, 36 Pac. Rep. 706.

Where defendants in an action for diversion of water admit the diversion, and set up a claim of right to use the water on land farmed by them jointly, a finding that defendants caused the diversion is not necessary to support a joint judgment against them. Williams v. Harter, 121 Cal. 47, 53 Pac. Rep. 405.

See, also, Hulsman v. Todd, 96 Cal. 228, 31 Pac. Rep. 39; Hillman v. Newington, 57 Cal. 56; Bowman v. Bowman, 35 Ore. 279, 57 Pac. Rep. 546; Bates v. Van Pelt, 1 Tex. Civ. App. 185, 20 S. W. 949.

If defendant and the corporation for whom he worked were both responsible for trespass to plaintiff's reservoir, plaintiff could elect to sue one or both of them in an action for damages and injunction. Koch v. Story, 47 Colo. 335, 107 Pac. Rep. 1093.

Where a contractor constructs for a city a work which, by reason of its nature and location, causes damage to another, which might have been prevented by the exercise of reasonable prudence as to the plan and location of such works, the contractor and the city are severally liable. De Baker v. Southern Cal. R. Co., 106 Cal. 257, 39 Pac. Rep. 610, 46 Am. St. Rep. 237.

"If two or more parties, acting jointly, wrong and injure another, they are jointly and severally liable for the consequences, and the injured party may at his option sue one or all of those contributing to the injury." Arnold v. Chicago etc. R. Co., —— Kan. ——, 119 Pac. Rep. 373.

7 In an action, where it does not appear from the complaint that the subject of litigation is within any water district, or that there is any water master in charge of the water in question, a demurrer based on the nonjoinder of the water master is not well taken. Boulware v. Parke, 4 Idaho 692, 43 Pac. Rep. 680.

8 Colorado etc. Co. v. Morris, 1 Colo. App. 401, 29 Pac. Rep. 302.

9 Boulder v. Fowler, 11 Colo. 396, 18 Pac. Rep. 337; Hughes v. City of Austin, 12 Tex. Civ. App. 178, 33 S. W. Rep. 607; City of Paris v. Tucker, ——Tex. Civ. App. ——, 93 S. W. Rep. 233; City of San Antonio v. Rivas, Tex. Civ. App., 57 S. W. Rep. 855; Umschied v. City of San Antonio, Tex. Civ. App., 69 S. W. Rep. 496; Levy v. Salt Lake City, 3 Utah 63, 1 Pac. Rep. 160; *Id.*, 5 Utah 302, 16 Pac. Rep. 598; Richardson v. City of Eureka, 110 Cal. 441, 42 Pac. Rep.

So, also, may public corporations, such as irrigation districts.[10] And both municipalities or irrigation districts are held to the same rule for negligence, as are private individuals or corporations.

The tenant is the proper party defendant for injuries caused by his acts during his tenancy to the lands of third parties, without the landlord's direction or control.[11]

In Montana it is provided by statute that when damages are claimed for the wrongful diversion of water, in any such action the same may be assessed and apportioned by the jury in their verdicts, and the judgment thereon may be entered for or against one or more of several plaintiffs, or for or against one or more of several defendants. In any action concerning joint water rights or joint rights in ditch, unless partition of the same is asked by parties to the action, the Court shall hear and determine such controversy as if the same were several as well as joint.[12]

**§ 1686. Pleadings—Complaint.**—The material allegations in a complaint in an action for damages for injuries to water rights, ditches, or canals, or other works, lands, growing crops, or personal property, do not differ materially from the allegations of a complaint for damages caused from other injuries. The plaintiff should allege his ownership, or right of possession, of the property in question;[1] the specific injury to such property caused by the act of the

See, also, Comp. Laws, Utah, 1907, Sec. 1288x40.

1 Where the water rights in question have been decreed to the plaintiff, such decree should be set up. Boulware v. Parke, 4 Idaho 692, 43 Pac. Rep. 680.

Carter v. Wakeman, 42 Ore. 147, 70 Pac. Rep. 393, holding that a complaint for the obstruction of an easement need only state plaintiff's ownership thereof, describing it, without stating how it was acquired.

A complaint, in an action for injury to real estate by water from an irrigation canal, which describes the prem-

defendant,[2] and, in cases of negligence, except in actions caused from the breakage or leakage of reservoirs, where the owner is held to be the insurer against damage,[3] he must set forth the specific act or acts which constituted the negligence upon the part of the defendant, or the facts which constituted his want of reasonable or ordinary care;[4] the amount that he was damaged by such injuries and pray for the same.[5] The motive of the defendant in committing the injuries need not be stated, and when so stated may, upon motion, be stricken out.[6]

ises as the north half of the northwest quarter of a specified section in a designated township and range, with the exception of twenty-nine acres previously sold, which twenty-nine acres were unaffected, sufficiently describes the land against a general demurrer or objection to evidence. Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828.

In an action for injury to crops by the destruction of a flume feeding and conveying water to irrigate plaintiff's land, and proof of plaintiff's occupancy for over thirty years is sufficient proof of title without deraigning a record title. Gustin v. Harting, —— Wyo. ——, 121 Pac. Rep. 522.

2 Dennis v. Crocker-Huffman etc. Co., 6 Cal. App. 58, 91 Pac. Rep. 425.

The date of such injury must be pleaded. Miller v. Douglass, 7 Ariz. 41, 60 Pac. Rep. 722.

The damages claimed must be for injuries to plaintiff's enterprise, and not for the value of a certain quantity of water. Parks etc. Co. v. Hoyt, 57 Cal. 44.

3 See Secs. 1669-1674.

See, also, Garnet etc. Co. v. Sampson, 48 Colo. 285, 110 Pac. Rep. 79.

4 A complaint that the damage caused was due to defendant's gross and willful negligence in failing to properly construct the canal and headgate, and in failing to properly maintain the headgate and to control the water in the canal, was held to be sufficiently specific as to the manner in which the defendant was guilty of the negligence charged. Dennis v. Crocker-Huffman etc. Co., 6 Cal. App. 58, 91 Pac. Rep. 425.

See, also, Crowder v. McDonnell, 21 Mont. 367, 54 Pac. Rep. 43; Consolidated Canal Co. v. Peters, 5 Ariz. 80, 46 Pac. Rep. 74; McDonald v. Bear River etc. Co., 15 Cal. 145, 1 Morr. Min. Rep. 626.

That negligence must be pleaded and proved, see Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828.

Hill v. Standard Min. Co., 12 Idaho 223, 85 Pac. Rep. 907.

5 Boulware v. Parke, 4 Idaho 692, 43 Pac. Rep. 680.

In an action for damages by a riparian owner for injuries caused by the diversion of the waters of a stream to plaintiff's land and cattle, evidence is not admissible for injuries to lands or cattle not mentioned in the complaint, or to lands not bordering on the stream. Heinlen v. Fresno etc. Co., 68 Cal. 35, 8 Pac. Rep. 513.

6 Equitable Securities Co. v. Montrose etc. Co., 20 Colo. App. 465, 79 Pac. Rep. 747.

Where a complaint alleged that defendant had constructed an irrigation ditch intersecting land on which the plaintiff had a right of pasture, and that the defendant negligently permitted the ditch to enlarge, and that plaintiff's cattle were lost by miring therein, but did not state that after its enlargement the ditch was larger than its right of way, and did not state whether the plaintiff knew the conditions of the ditch when he turned his cattle on the land, it was held that the complaint did not state a cause of action.[7] Where the plaintiff alleged and relied wholly upon an express contract, he can not recover on a *quantum meruit*, no contract being proven.[8] All special damages must be pleaded before a recovery can be had.[9]

Where the basis of the action is for damages resulting from a breach of contract, the substance of such contract should, at least, be pleaded, also that the plaintiff has complied with all of its terms upon his part to be performed, the facts constituting the breach, and the injuries resulting therefrom, and the amount of damages resulting therefrom. A complaint by one who entered into a contract with a company alleged that the defendant refused to deliver water in sufficient quantities to irrigate plaintiff's crops when there was water flowing in the river sufficient for such purpose, and, at periods of low water, had refused to deliver to the plaintiff the amount of water called for. The complaint did not allege that the plaintiff ever requested the defendant to deliver water to him, and did not state how much was necessary, nor the quantity actually delivered. It was held that the complaint did not state a cause of action.[10]

In an action for damages based upon fraud, a complaint alleging that, by virtue of a water right held by the plaintiff, appurtenant to one of four subdivisions of land which he owned, he was entitled to receive from the defendant irrigation company water

7 Messenger v. Gordon, 15 Colo. App. 428, 62 Pac. Rep. 956.

8 Wright v. Sonoma County, 156 Cal. 475, 105 Pac. Rep. 409, 134 Am. St. Rep. 140.

9 Sommerville v. Idaho Irr. Co., —— Idaho ——, 123 Pac. Rep. 302.

10 Consolidated Canal Co. v. Peters, 5 Ariz. 80, 46 Pac. Rep. 74.

It was held that where one framed his complaint for damages on the theory that the defendants were liable for a violation of a general duty, that he could still recover for breach of contract, and where the defendant in his answer had set up the contract. Crowder v. McDonnell, 21 Mont. 367, 54 Pac. Rep. 43.

with which to irrigate the parcel of land on which the water right was located; that he did not know the true location of the water right, and that the defendant company was the only depositary of the desired information; that on application of the general manager plaintiff was falsely and fraudulently informed that the evidence in his custody showed the location of the water right on a subdivision on which no such right existed; that such representation was knowingly made that the plaintiff should act thereon; and that he did act thereon. It was held by the Court that such complaint was sufficient.[11]

In an action for damages by a riparian owner as such, a complaint which states that the plaintiff is the owner and in the possession of a certain tract of land, describing it, through which a certain stream was accustomed to flow, and that the defendant diverted the water from the stream from its accustomed channel to his injury, describing it, need not also allege that the plaintiff had the right to the use of the water, since such right is implied from his ownership of the land.[12]

The courts are usually liberal in allowing amendments to pleadings, and should always allow them when they do not impair the rights of the opposite party by such procedure.[13]

§ 1687. **Pleadings—Answer—Cross-complaint.**—The defendant may demur to the complaint of the plaintiff, upon any ground allowed by the statute of the State where the action is brought.[1]

See, also, damages to riparian ownership, Secs. 1662, 1665.

13 An amendment of the *ad damnum* clause by increasing the amount claimed may be allowed during the trial. Shields v. Orr Extension D. Co., 23 Nev. 349, 47 Pac. Rep. 194.

See, also, Saint v. Guerrerio, 17 Colo. 448, 30 Pac. Rep. 335, 31 Am. St. Rep. 320; Bean v. Stoneman, 104 Cal. 49, 37 Pac. Rep. 777, 38 Pac. Rep. 39; Gould v. Stafford, 101 Cal. 32, 35 Pac. Rep. 429.

1 Boulware v. Parke, 4 Idaho 692, 43 Pac. Rep. 680; Equitable Securities Co. v. Montrose etc. Co., 20 Colo. App. 465, 79 Pac. Rep. 747.

The failure of a complaint to state a cause of action may be availed of by demurrer, by objection to the evidence, by motion for judgment on the

In the consideration of a general demurrer, by the Court, every intendment favorable to the pleader should be indulged in to sustain the pleading.[2] But objections to a complaint, not taken by demurrer or answer, are waived.[3] The defendant may also answer the allegations of the plaintiff's complaint by merely denying the allegations therein contained.[4] The defendant may, also, in addition thereto, set up as many affirmative defenses as he may have, such as contributory negligence,[5] contract,[6] the limitation of the action,[7] or act of God.[8] He may amend his answer by omitting the original defense, and set up by new allegations an entirely new defense.[9] Again, should the defendant have a cause of action

pleadings, by motion in arrest of judgment, or on motion for new trial. Consolidated Canal Co. v. Peters, 5 Ariz. 80, 46 Pac. Rep. 74.

2 Cleghon v. Barstow Irr. Co., 41 Tex. Civ. App. 531, 93 S. W. Rep. 1020.

3 Under Rev. Codes, Sec. 6539, providing that objections to a complaint, not taken by demurrer or answer, are waived, an objection to a complaint for injury to land, because it is indefinite in the description of the land involved, must be made by special demurrer, or it is waived. Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828.

4 The failure of the owner of an irrigation ditch to file a statement and map thereof as required by the statute is no defense to an action by the owners against a railroad company for the destruction of the ditch in building its roadbed. Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322.

It is no defense to an action against a water company for refusal to furnish water to an applicant for water for irrigation, that his ditch for taking water from the ditch of the company is in part upon its right of way, if it be there with its consent, or if its refusal was not based on such ground. Lowe v. Yolo County etc. Co., 157 Cal. 503, 108 Pac. Rep. 207, 8 Cal. App. 167, 96 Pac. Rep. 379.

The fact that a person entitled to the use of one-half of the water of an irrigation ditch is denied such right by the other owner is no defense to an action by the latter for damages caused by the former digging another ditch and appropriating all of the water. Arnett v. Linhart, 21 Colo. 188, 40 Pac. Rep. 355.

In an action for damages sustained by defendant's cutting plaintiff's irrigation ditch and diverting water from plaintiff's land, it is no defense that the defendant was a lessee of plaintiff and had a right to take the water as a tenant for the year, or, if not a tenant, that he was a licensee of plaintiff, where such tenancy or license had been terminated by defendant's act of "jumping" the land and claiming the same adversely to plaintiff. White v. Brash, 3 Ariz. 212, 73 Pac. Rep. 445.

5 See Sec. 1688.

6 See Sec. 1689.

7 See Sec. 1690.

8 See Secs. 1691, 1692.

9 As an amendment to a pleading may be allowed to correct certain enumerated mistakes, or "a mistake in any other respect," and "in other

against the plaintiff which is germane to the original action, he may set the same up by way of cross-complaint. But he should plead his right and the injuries thereto with the same particularity as is required of the plaintiff in his complaint.[10]

**§ 1688. Pleadings—Defenses—Acts of the plaintiff and contributory negligence.**—The plaintiff can not recover where the injuries to his property were the direct result of his own acts, or where he assisted the defendant by acts of his own whereby the injuries resulted, or through his own negligence. So, where such is the case, the defendant in an action for damages may set up such acts of the plaintiff as a defense. So, it is held in an action for damages for the diversion of the water by the building and maintenance of a dam by defendants, and where it appeared that plaintiff assisted in maintaining the dam and diverting the water, he can not recover, and that such participation in the diversion of the water need not be specially pleaded, but that it might be proved under the issue raised by the defendant's denial that the plaintiff was injured by such diversion.[1]

particulars'' (Code Civil Proc., Sec. 473), the Court may allow an amendment to an answer, though it is mainly to correct a mistake of law made by defendant's attorney. Gould v. Stafford, 101 Cal. 32, 35 Pac. Rep. 429.

In an action for depriving plaintiff's crops of the necessary water, it is held that it was no defense that plaintiff did not have a valid appropriation of the water claimed by him so long as it was not defendant's. Dalton v. Kelsey, 58 Ore. 244, 144 Pac. Rep. 464.

10 Silver Creek etc. Co. v. Hayes, 113 Cal. 142, 45 Pac. Rep. 191; Peters v. Lewis, 33 Wash. 617, 74 Pac. Rep. 815.

Damages from the issuance of a temporary injunction can not be recovered in the injunction suit itself by cross-complaint. Sullivan v. Jones, 13 Ariz. 229, 108 Pac. Rep. 476.

1 Churchill v. Bauman, 95 Cal. 541, 30 Pac. Rep. 770; 104 Cal. 369, 36 Pac. Rep. 93, 38 Pac. Rep. 43. In the first appeal Haven, J., dissented for the reason that such defense should have been specially set out in the answer.

In an action against an irrigation company, by a stockholder, for failure to supply her with her proportion of the water, where the defendant relied upon the defense that it had done the best it could, and that the ditch was new, and that the laterals built by the plaintiff were not properly constructed, it was held that the questions thus raised were for the jury. Rocky Ford etc. Co. v. Simpson, 5 Colo. App. 30, 36 Pac. Rep. 638.

See, also, McLellan v. Brownsville etc. Co., 46 Tex. Civ. App. 249, 103 S. W. Rep. 206; Cline v. Stock, 71

Where the injuries to the plaintiff resulted from his own negligent act, the defendant may set up as one of his defenses that of contributory negligence, and, if proven, such a defense will be good. And, in this connection, contributory negligence may be defined as the want of ordinary care upon the part of the person injured by the actionable negligence of another, combining and concurring with that negligence, and contributing to the injury, as the proximate cause thereof, without which the injury would not have occurred.[2] But, the contributory negligence in cases of this nature must consist of some overt act of the plaintiff, which was the proximate cause of his injuries. So, in an action for flooding land, in order to successfully maintain a defense of contributory negligence, the defendant must show that the plaintiff himself opened the waste gate of the defendant's canal, or broke through its bank, or committed some other overt act, and thus caused the overflow of the water.[3]

The duty to exercise reasonable and ordinary care in the construction, maintenance, or operation of a ditch, canal, or other

Neb. 70, 98 N. W. Rep. 454, 102 N. W. Rep. 265; McCook Irr. Co. v. Crews, 70 Neb. 115, 102 N. W. Rep. 249.

2 Moakler v. Willamette etc. R. Co., 18 Ore. 189, 22 Pac. Rep. 948, 6 L. R. A. 656, 17 Am. St. Rep. 717; Emison v. Owyhee D. Co., 37 Ore. 577, 62 Pac. Rep. 13; Platte etc. Co. v. Dowell, 17 Colo. 376, 30 Pac. Rep. 68.

An affirmative defense in an action for damages by drainage from defendant's lands, simply stating that, if plaintiff was damaged, it was by reason of his own neglect, and not by any act of the defendants, is sufficient. Peters v. Lewis, 33 Wash. 617, 74 Pac. Rep. 815.

Where plaintiffs claimed injuries to their premises by the overflow of defendant's irrigation ditch, it was not liable for that part of the injury which was caused by plaintiffs' own acts in excavating their cellar and placing the foundation of their house so dangerously close to the ditch or on such low and wet ground that the cellar was flooded and the earth soaked and softened under the foundations by percolating water, which might have come into and stood stagnant in the cellar if the ditch had never overflowed. Malmstrom v. People's etc. Co., 32 Nev. 246, 107 Pac. Rep. 98, the Court saying: "If the defendant were holden for any injury resulting to the plaintiffs from their own acts under these circumstances, the owners of ditches that traverse the lands of others would have little protection for their prior rights."

See, also, Johnston v. Hyre, 83 Kan. 38, 109 Pac. Rep. 1075; Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254; Parker v. Gregg, 136 Cal. 413, 69 Pac. Rep. 22.

3 Emison v. Owyhee D. Co., 37 Ore. 577, 62 Pac. Rep. 13.

works, so that property shall not be injured from overflow or leakage, rests wholly with the ditch owner. Furthermore, there is no duty resting upon the land owner to avoid the consequences of the ditch owner's negligence. The doctrine of contributory negligence, therefore, is usually not applicable to cases of this nature; and, where the plaintiff is merely passive, although he may have had knowledge of the defects in the works, and could by effort upon his part have prevented the injury, he is not liable for contributory negligence on account of his mere inactivity.[4] And it is held that

[4] An instruction was also asked to the effect that the plaintiff himself should have exercised ordinary care to have avoided the consequences of defendant's acts, and, failing to do so, the parties were in mutual fault. The doctrine of contributory negligence is not applicable to cases of this nature, where the defendant had knowledge of the defects of its ditch, and could have prevented the injury. Under these circumstances, no duty rested upon the plaintiff to have avoided the consequences of defendant's acts." Shields v. Orr. etc. Co., 23 Nev. 349, 47 Pac. Rep. 194.

The fact that the plaintiff knew of the dangerous condition of a dam, and failed to institute special proceedings, for his protection, will not bar an action by him for damages caused by a subsequent breaking of the dam. Hollenbeck v. Dingwell, 16 Mont. 335, 40 Pac. Rep. 863, 50 Am. St. Rep. 502.

Where an action is brought to recover damages for injuries immediately resulting to land by the construction of a dam, and not for any injury that might thereafter occur, evidence as to whether or not plaintiff had made any effort to protect the land from erosion is immaterial. Oldenburg v. Oregon Sugar Co., 39 Ore. 564, 65 Pac. Rep. 869.

See, also, Reynolds v. Chandler River Co., 43 Me. 513; Plummer v. Penobscot Lum. Association, 67 Me. 363.

See, also, McCarty v. Boise City C. Co., 2 Idaho 225, 10 Pac. Rep. 623; McLeod v. Lee, 17 Nev. 103, 28 Pac. Rep. 124; Bacon v. Kearney Vineyard Syndicate, 1 Cal. App. 275, 82 Pac. Rep. 84; North Point etc. Co. v. Utah etc. Co., 16 Utah 246, 52 Pac. Rep. 168, 40 L. R. A. 851, 67 Am. St. Rep. 607; Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829; Fraler v. Sears etc. Co., 12 Cal. 555, 73 Am. Dec. 562; Greeley Irr. Co. v. House, 14 Colo. 549, 24 Pac. Rep. 329; Arave v. Idaho C. Co., 5 Idaho 68, 46 Pac. Rep. 1024; Lisonbee v. Monroe Irr. Co., 18 Utah 343, 54 Pac. Rep. 1009, 72 Am. St. Rep. 784.

See, also, Shields v. Orr etc. Co., 23 Nev. 349, 47 Pac. Rep. 194; Consolidated etc. Co. v. Hamlin, 6 Colo. App. 341, 40 Pac. Rep. 582; Stuart v. Noble Ditch Co., 9 Idaho 765, 76 Pac. Rep. 255; McLellan v. Brownsville etc. Co., 46 Tex. Civ. App. 249, 103 S. W. Rep. 206.

But see Sweeney v. Montana Cent. R. Co., 25 Mont. 543, 65 Pac. Rep. 912, where it was held that, in an action for injuries caused by the diversion of a stream, evidence that plaintiff, by a small expense in riprapping the bank of the new channel,

in order that contributory negligence of the plaintiff should defeat his recovery, his act must be the proximate cause of his injury; and if, without certain remote negligence, he still would have suffered the injuries for which he has brought an action for damages, the same was not contributory, in a legal sense.[5]

It was held in Colorado that where a party sues for damages by being restrained from using the water from a certain ditch, if it is shown that he could have obtained sufficient water from another source, he will not be entitled to receive a greater sum than he would have had to expend to obtain water from such source.[6]

§ 1689. **Pleadings—Defenses—Grant or contract.**—A good defense if properly pleaded is that the defendant had acquired the right to commit the act or acts complained of by grant or contract. So, where the defendants had a grant in writing for a valuable consideration for the erection of certain dams across a river, a judgment against them for damages under a complaint charging them with "wrongfully erecting and maintaining" such dams was erroneous, as violating the rights of the defendants under the grant.[1] But it is held in Oregon that a clause in a lease of water power, that, in default of a sufficient supply of water the lessor shall forfeit a *pro rata* proportion of the water rents accruing during such deficiency, is not a provision for the liquidated damages, such as will prevent the recovery of other damages by the lessee, when it appeared that the deficiency was the result of the lessor's failure to repair injuries to the race and dam.[2]

Local customs can not change the law of negligence; but it is held by the Utah Court, that when such customs are reasonable, un-

could have avoided or diminished the damages to his property, was admissible, it being his duty to use reasonable care to save it from injury.

See, also, Fullerton v. Fordyce, 144 Mo. 519, 44 S. W. Rep. 1053; Douglass v. Stephens, 18 Mo. 362; Lawson v. Price, 45 Md. 123; Scherrer v. Baltzer, 84 Ill. App. 126; Kansas Pac. R. Co. v. Mihlman, 17 Kan. 224.

interrupted, and uniform, and not contrary to public policy, they may affect the interpretation of contracts in their locality.[3]

The fact that there are also other wrong-doers is no defense to an action for damages, although the evidence of such is receivable in mitigation of damages.[4]

**§ 1690. Pleadings—Defenses—Limitation of actions and prescription.**—An action for damages must be brought within the period provided by the statute of limitations of the State where the cause of action arose; otherwise it will be barred. And, upon this subject, it is held that the statute of limitations begins to run from the time the cause of action accrues, even though the actual damages resulting therefrom may not have accrued until some time afterwards.[1] So, it is held that injuries to land from water seeping from a properly constructed irrigation ditch which is intended to be permanent constitutes a single cause of action; and, as affected by the statute of limitations accrues at the beginning of the injury.[2] And, in cases where the statute of limitations has run,

[3] Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829; Hartson v. Dill, 151 Cal. 137, 90 Pac. Rep. 530.

[4] Gould v. Stafford, 77 Cal. 66, 18 Pac. Rep. 870; Beck v. Bono, 59 Wash. 479, 110 Pac. Rep. 13.

An irrigation company sued for failure to furnish sufficient water for plaintiff's rice crops during a certain season can not rely upon a release of liability contained in a contract for service for the succeeding season if there was no other consideration than the agreement for such subsequent service; the company being legally bound to furnish the water. Lone Star Canal Co. v. Cannon, —— Tex. Civ. App. ——, 141 S. W. Rep. 799.

[1] Middlekamp v. Bessemer etc. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795, and cases cited.

Where plaintiff and defendant had an agreement whose express purpose was to settle and establish the respective rights of the parties to the water and ditches therein mentioned, an action by plaintiff for interfering with his rights thereunder, in that defendant entered upon the ditch upon his own land and diverted the water so that it failed to reach the land of the plaintiff, but did not enter upon the plaintiff's land, is an action on the case, and is barred in two years under L. O. L., Sec. 8, subd. 1, and is not an action on the contract or for trespass, which are barred in six years by L. O. L., Sec. 6, subd. 1. Dalton v. Kelsey, 58 Ore. 244, 114 Pac. Rep. 464.

where such statute is properly pleaded, it constitutes a good defense in an action for damages of all character.[3] But in order to maintain such a defense, or one based upon a prescriptive right, it must be properly pleaded.[4] A finding of fact which found that the damages sought to be recovered accrued within the period covered by the statute of limitations immediately prior to the commencement of the action, when such statute is made a defense, is a sufficient finding on such defense, and negatives it.[5]

**§ 1691. Act of God or inevitable accident as a defense for injuries to property.**—The defense of act of God, or *vis major,* or inevitable accident, has been oftentimes interposed in actions for damages for injuries from the flooding of land, or other destruction of property, resulting from the breakage, overflow, or leakage of works. As to whether such a defense can be maintained or not depends upon the circumstances of each particular case. To be sure, "No one is responsible for that which is merely the act of God, or inevitable accident."[1] But, in order to determine whether a

City v. Frohwerk, 10 Kan. App. 120, 62 Pac. Rep. 432.

A cause of action for flooding lands by the erection of a dam accrues for the purpose of determining limitations when the land is flooded, and not when the dam is erected. Greeley Irr. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985.

For pleading a prescriptive right, see Sec. 1055.

5 Shurtliff v. Extension D. Co., 14 Idaho 416, 94 Pac. Rep. 574.

1 Chidester v. Consolidated D. Co., 59 Cal. 197.

Canal companies and others attempting to control and use water are only required to anticipate and prepare to meet such emergencies as may reasonably be expected to arise in the course of nature. They are not required to meet unlooked-for and overwhelming displays of power—such as storms of unusual violence as to surprise cautious and reasonable men. Lincoln v. Monroe etc. Co., 18 Utah 343, 54 Pac. Rep. 1008, 72 Am. St. Rep. 784.

"So far as disclosed by the evidence, the damage proximately resulted, not from human agency, but from one of those unexpected, unanticipated, superior causes over which the canal company had no control, and which no reasonable precaution could have prevented. We think it clear,

ditch, canal, or reservoir owner can maintain such a plea in an action for damages against him, it is necessary to ascertain the true legal significance of the term "act of God," or "inevitable accident." One of the best definitions that we have found and especially applicable to the cases under discussion, is taken from the work of an eminent law book writer, and we will therefore adopt it as our own. It is stated thus: "The act of God signifies, in legal phraseology, any inevitable accident occurring without the intervention of man, and may, indeed, be considered to mean something in opposition to the act of man, as storms, tempests, and lightning. The above maxim may therefore be paraphrased and explained as follows: It would be unreasonable that those things which are inevitable by the act of God, which no industry can avoid, nor policy prevent, should be construed to the prejudice of any person in whom there has been no laches."[2] The expression, as

therefore, that, under the case as presented here, the defendant can not be held liable." Grand Valley Irr. Co. v. Pitzer, 14 Colo. App. 123, 59 Pac. Rep. 420.

See, also, Proctor v. Jennings, 6 Nev. 83, 3 Am. St. Rep. 240, 4 Morr. Min. Rep. 265; Mathews v. Kinsell, 41 Cal. 512; Ohio etc. R. Co. v. Thillman, 143 Ill. 127, 32 N. E. Rep. 529, 36 Am. St. Rep. 359; Blythe v. Denver etc. R. Co., 15 Colo. 333, 25 Pac. Rep. 762, 11 L. R. A. 615, 22 Am. St. Rep. 403; Denver etc. R. Co. v. Andrews, 11 Colo. App. 204, 53 Pac. Rep. 532; Town of Jefferson v. Blake, 23 Okla. 684, 102 Pac. Rep. 79, 24 L. R. A., N. S., 214; Broadway Mfg. Co. v. Leavenworth etc. Co., 82 Kan. 616, 106 Pac. Rep. 1034; Eagan v. Central Vermont R. Co., 81 Vt. 141, 69 Atl. Rep. 732, 16 L. R. A., N. S., 928, 130 Am. St. Rep. 1031; Buel v. Chicago etc. R. Co., 81 Neb. 130, 116 N. W. Rep. 299.

A charge which after defining an act of God stated that a person is not liable for injuries resulting therefrom, "provided reasonable and ordinary care is exercised to guard against such occurrences," is erroneous, since a person is not bound to anticipate or guard against an act of God. Lyon v. Chicago etc. R. Co., —— Mont. ——, 121 Pac. Rep. 886.

[2] Broom's Legal Maxims, pp. 227, 228.

"But an act of God, in legal phraseology, means an accident against which ordinary skill and foresight are not expected to provide. This, applied to water courses, would include only floods or extraordinary freshets, and not such rises or high water in a stream as are usual and ordinary, and reasonably anticipated at particular seasons of the year." Dorman v. Ames, 12 Minn. 451 (Gil. 347).

The term "act of God," in its legal sense, applies only to events in nature so extraordinary that the history of climatic variations and other conditions in the particular locality affords no reasonable warning of them. Gulf Red Cedar Co. v. Walker, 132 Ala. 553, 31 So. Rep. 374.

will be noticed, excludes the idea of human agency; and, therefore, if it appears that the injuries happened in any way through the intervention of man, it can not be held to have been the act of God, but must be regarded as the act of man.[3] This principle is well illustrated by the Circuit Court of Appeals in the recent Salton Sea cases.[4] There, as the Court states: "The evidence shows conclusively that it was the defendant's method of constructing the intakes that resulted in turning the flood of the Colorado River into the Salton Sink," and the result of which was the destruction of a large amount of farming land. And, although "the fact that an extraordinary flood came down the river contributing to the disaster," the Court held that that fact did not relieve the defendant from liability. If it had not been for the intervention of man in the construction of the works, the flood, although extraordinary, would have passed down the river without doing damage, as it had done on previous occasions. Therefore, the Court held that the injuries could not be regarded as having been caused by act of God, but must be regarded as the act of the ditch owners, and for which they were held liable.

As well stated in a Washington case:[5] "The 'act of God' as that expression is known in law, is a mixed question of law and fact. The defining and limitation of the term, its several characteristics, its possibilities as establishing and controlling exemption from liability, are questions of law for the Court; but the existence or non-existence of the facts upon which it is predicated are questions for the jury."[6]

So, therefore, the correct rule of law in actions for damages, where the defense is set up that the injuries were caused by act of

[3] Polack v. Pioche, 35 Cal. 416, 95 Am. Dec. 115; Chidester v. Consolidated D. Co., 59 Cal. 197.

[4] California Dev. Co. v. New Liverpool Salt Co., 172 Fed. Rep. 792, 97 C. C. A. 214, quoting from Kinney on Irr., 1st Ed., Secs. 314, 315.

[5] Gibson v. Cascade Lbr. Co., 54 Wash. 289, 103 Pac. Rep. 11.

[6] Where the Court, in instructing the jury, defined "an extraordinary flood" that it "means one of the heaviest that ever occurred in that locality," it was held that such instruction was not misleading, where the jury were also instructed that if the river overflowed its banks by reason of an extraordinary flood, or freshet, which it was not capable of carrying within its banks, and was not occasioned by the dam of the defendants, plaintiffs could not recover, and that defendants would be excused from liability on account of an extraordinary flood which could not be foreseen and guarded against. Greeley

God, is that, when two causes combine to produce the injury, both of which causes are, in their nature, proximate, the one being a negligent act of the defendant, and the other in the nature of an act of God, for which neither party is responsible, then the defendant is liable for such loss as is proximately caused by his own negligent act concurring with the act of God, provided the loss would not have been sustained by the plaintiff, but for such negligent act of the defendant.[7]

In order to take advantage of act of God as a defense, it must be properly pleaded by the defendant.[8] No definite rule can be laid down as to what will or will not constitute a defense of act of God which will apply to all cases, but it is a question of fact for the jury to determine under the facts and circumstances of each particular case, and under the proper instructions of the Court.[9]

Irr. Co. v. Von Trotha, 48 Colo. 12, 108 Pac. Rep. 985. Judgment in this case was rendered in favor of the plaintiffs, and affirmed by the Supreme Court.

**§ 1692. Act of God as a defense for failure to deliver water under duty or contract.**—Where a person or company is under the duty or contract of furnishing water to consumers, and is prevented from so furnishing the water by storms whereby their works are broken, the defense of act of God has often been pleaded in actions for damages for the breach of such contract or the violation of such duty.[1] But, as to whether such a defense can be maintained or not depends entirely as to whether or not the disaster was caused solely by an act of God, as defined in the preceding section,[2] or whether the acts of the defendant contributed to the injuries. Where, however, the injuries resulted from the failure of the company to furnish water caused solely by act of God, such as some extraordinary and unprecedented storm, or even some extraordinary and unprecedented drought, whereby the water in the natural source of supply is so lowered to such an unusual stage that it could not have been anticipated by engineering skill or the residents of the neighborhood,[3] or through some other unforeseen and extraordinary occurrence, which ordinary prudence might not have anticipated, and at the same time have taken the proper steps to guard against, through which it is a physical impossibility for the company to furnish the water as contracted, the company will be excused from performing the contract in that respect. In such a case there will be no such breach of the contract that an action will lie for damages by a consumer against the company for its failure to perform.[4]

1 For such a defense in actions for damages to property, see Sec. 1507.

2 See Sec. 1691.

3 "If the stream had, in consequence of drought, failed to furnish the necessary amount of water to operate defendant's mills, this would have been a destruction of the subject matter of the contract which would have been excused." Pengra v. Wheeler, 24 Ore. 532, 34 Pac. Rep. 354, 21 L. R. A. 726.

A party must perform his contract, unless its performance is rendered impossible by act of God, the law, or the other party. Unforeseen difficulties, however great, will not excuse him. Ingle v. Jones, 69 U. S. 2 Wall. 1, 17 L. Ed. 762.

See, also, Beebe v. Johnson, 19 Wend. 500, 32 Am. Dec. 518.

4 The impossibility of repairing leased dams or races ten days after the water falls to the average winter stage, as agreed upon by the lease, because the water immediately rises again and continues high, releases the lessor from liability for breach of the covenant, if he makes the repairs as soon as possible. Pengra v. Wheeler, 24 Ore. 532, 34 Pac. Rep. 354, 21 L. R. A. 726.

Such is the rule of law upon the subject, especially in cases of fire, but the fact is that the cases are very few where a water company has been excused from the solemn obligations of its contracts, whereby it bound itself to furnish its consumers with water at a certain time, for such an alleged reason. There is usually some fact connected with the case which does not bring it within the rule. As was said in a Colorado case: "Under the conditions and circumstances shown in this case, the results to the users of water, in a failure to supply it, are so disastrous and irremediable that the party contracting to supply it should not be exonerated from a failure to perform, except under circumstances clearly showing that the failure was chargeable to *vis major*, and not to negligence and inattention."[5] It is no excuse for the non-performance of a contract that it is impossible for the company to fulfill it, if the performance be in its nature possible.[6]

If, however, the failure to furnish the water was not due to any negligence or inattention upon the part of the company, and it is provided in the contract itself that the company is exempt from all liability on account of any unforeseen causes of accident, or where from natural causes there is an unusual shortage of water in its source of supply, the company will not be able to furnish its consumers the amount of water contracted for, the courts will uphold such a provision in the contract and excuse the company from such a cause from furnishing the full amount of water;[7] and, in such a

For release from liability from torts by act of God, see Sec. 1691.

[5] Pawnee etc. Co. v. Jenkins, 1 Colo. App. 425, 29 Pac. Rep. 381; Sacchi v. Bayside Lbr. Co., 13 Cal. App. 72, 108 Pac. Rep. 885; Evans v. Prosser Falls Land & Pr. Co., 62 Wash. 178, 113 Pac. Rep. 271; Leavitt v. Lassen Irr. Co., 157 Cal. 82, 106 Pac. Rep. 404, 29 L. R. A., N. S., 213.

[6] The facts "do not tend to show that the source of the water was wholly exhausted, so as to render the irrigation of the land physically impossible; and for this reason the act of God is not involved." Anderson v. Adams, 43 Ore. 621, 74 Pac. Rep. 215.

See, also, Reid v. Alaska etc. Co., 43 Ore. 429, 73 Pac. Rep. 337; Pengra v. Wheeler, 24 Ore. 532, 34 Pac. Rep. 354, 21 L. R. A. 726, where it was held that it was no excuse that the work could not be profitably done within the time agreed upon.

Ryan v. Rogers, 96 Cal. 349, 31 Pac. Rep. 244.

[7] Landers v. Garland Canal Co., 52 La. 1465, 27 So. Rep. 717.

A contract releasing a company from damages by reason of unavoidable accidents and breaks in its works, will not release a liability for damages which are the result of gross and continued negligence. Catlin etc.

case, the consumers are not liable to the company for the water rates for the amount of water not furnished.[8] And, contracts which provide that in time of unusual drought the consumers shall prorate the supply according to their respective rights are upheld by the courts, and, where the shortage of supply is due to no fault of the company, it is exempt from further liability for not furnishing the full amount.[9] But it should be provided in such contracts to the effect that the consumers should have a *pro rata* deduction from the sum stipulated to be paid each year for the water.[10] But where the deficiency was caused by other means than by an act of God, as where there would have been sufficient water except for some new use made by the company, the company will be held liable.[11]

§ 1693. **Evidence—Burden of proof.**—In all actions for damages for the injury to property from breakage and overflow, except in reservoir and dam cases in jurisdictions where by statute, or by court decisions, the owner is made the insurer against all damages,[1] the gist of such actions is negligence; and, therefore, until such negligence is shown by the evidence, there can be no liability upon the part of the defendant causing the injuries.[2] We have shown in previous sections that the acts constituting the negligence must be alleged with particularity, otherwise the complaint does not state a cause of action and is demurrable.[3] And, it being necessary to allege such acts, it is also necessary to prove them by a preponderance of the evidence; and, therefore, the burden of proof rests in the first instance upon the plaintiff to prove the negligence in

Co. v. Best, 2 Colo. App. 481, 31 Pac. Rep. 391.

2 See Sec. 1672.

3 See Sec. 1686.

conformity with the allegations in his complaint charging the same. In reservoir and dam cases, however, where the owner is made the insurer, it is only necessary for the plaintiff to prove the injury and that it was caused from such works, and it is not necessary to prove negligence upon the part of the defendant.[4] But, in ditch and canal cases, owing to the fact that with ordinary care a ditch and canal can be rendered harmless, and owing to the rule of law that the owner thereof is not made the insurer against all damages, the mere fact of the water overflowing, breaking, or seeping through the banks of a ditch or canal, while it may be one fact tending to prove negligence upon the part of the owner thereof, which may be considered by the jury together with the other facts and circumstances surrounding each particular case, it can not be considered as a legal presumption in and of itself of negligence. Mr. Farnham states a different rule, as follows: "If a break occurs, the burden is upon the owner of the ditch to establish his freedom from negligence, and his failure to do this will render him liable."[5] That this is not the rule of law in these cases is borne out by the great weight of authority. As was held in an early California case, the rule of *res ipsa loquitur* does not apply to such cases.[6] In a late Washington case, however, the exact contrary rule was adopted, and the Court said: "We think the better rule is that the doctrine of *res ipsa loquitur* applies in cases of this character."[7] If the rule of reasonable and ordinary care in ditch and canal cases is to be adhered to, and the ditch owner is not to be held as the insurer of all damages caused by the escape of the water, the rule as stated by Mr. Farn-

ham is not the correct one as laid down by the authorities, neither is it the logical one.[8]

The mere fact of the breaking of a ditch, although it is one circumstance of evidence which may be considered by the jury with the other circumstances proven in any particular case, does not, in and of itself raise the legal presumption of negligence, and thus throw the burden upon the defendant "to establish his freedom of negligence." But, as in other cases involving negligence, the negligent acts of the defendant must be pleaded, and the burden of proof is upon the plaintiff to establish by a preponderance of the evidence the negligent acts of the defendant as pleaded.[9] And, fur-

[8] "A ditch owner is not an insurer of his ditch against damages which may result from its operation." Fleming v. Lockwood, 36 Mont. 384, 92 Pac. Rep. 962, 14 L. R. A., N. S., 628, 13 Am. & Eng. Ann. Cas. 263.

See, also, Howell v. Big Horn Basin C. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596; King v. Miles City etc. Co., 16 Mont. 463, 41 Pac. Rep. 431, 50 Am. St. Rep. 506; Chidester v. Consolidated D. Co., 59 Cal. 197; Lisonbee v. Monroe Irr. Co., 18 Utah 343, 54 Pac. Rep. 1009, 72 Am. St. Rep. 784; Frederick v. Hale, 42 Mont. 153, 112 Pac. Rep. 70.

The owner of a ditch is not liable *per se* from leakage from his ditch, without negligence upon his part, by the burrowing of gophers or other animals. Tenney v. Miners' etc. Co., 7 Cal. 335, 11 Morr. Min. Rep. 31. However, if the ditch owner is negligent and injuries occur from this cause, he is liable. Greeley etc. Co. v. House, 14 Colo. 549, 24 Pac. Rep. 329.

[9] "The gist of this action is negligence; and until some negligence is shown there can not be said to be any liability." Hopkins v. Butte etc. Co., 13 Mont. 223, 33 Pac. Rep. 817, 40 Am. St. Rep. 438.

"The burden of proof was on the plaintiff to show that this water broke through the mismanagement or imperfect construction, repair, or management of the ditch, and damaged the property of the plaintiff; and the burden devolves upon the plaintiff to show the amount of damages to her property, or the value of the property destroyed." Greeley Irr. Co. v. House, 14 Colo. 549, 24 Pac. Rep. 329.

Where several acts of negligence are charged in the complaint, a recovery will be sustained on proof of any one of them, provided the negligence proved was the proximate cause of the injury; but where two acts of negligence are charged, and the pleading discloses that neither act in itself would have caused the injury, but that the concurrence of both was necessary, proof of both acts is necessary to justify a recovery. Frederick v. Hale, 42 Mont. 153, 112 Pac. Rep. 70.

The burden in such case is on the one claiming damages to show an appreciable injury to his crops. Lum Ah Lee v. Ah Soong, 16 Hawn. 163.

See, also, Malmstrom v. People's Drain D. Co., 32 Nev. 246, 107 Pac. Rep. 98; King v. Miles City Irr. Co., 16 Mont. 463, 41 Pac. Rep. 431, 50 Am. St. Rep. 506; Tenney v. Miners' D. Co., 7 Cal. 335, 11 Morr. Min. Rep.

thermore, the proof must conform to the allegations of negligence as set forth in the complaint. Otherwise there will be a fatal variance, and the plaintiff can not recover.[10]

Where the defendant in his answer sets up an affirmative defense,[11] the burden is, of course, upon the defendant to prove such defense, by a preponderance of all the evidence in the case upon that point. So, it therefore follows that where the defendant sets up an act of God as a defense, the burden of proof is upon him.[12]

It is error for the Court to refuse to admit in evidence an original complaint for the purpose of contradicting the allegations of an amended complaint.[13] It is competent to prove that a headgate in defendant's ditch was lowered after the suit was brought, and that the water then flowed down, and ceased to stand in it, as evidence tending to prove that the defendants were negligent in not lowering the gate before the injury complained of.[14] Photographs after

31; Colorado etc. Co. v. Morris, 1 Colo. App. 401, 29 Pac. Rep. 302; Fleming v. Lockwood, 36 Mont. 384, 92 Pac. Rep. 962, 14 L. R. A., N. S., 620, 13 Am. & Eng. Ann. Cas. 263; Howell v. Big Horn Basin C. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596; Dennis v. Crocker-Huffman etc. Co., 6 Cal. App. 58, 91 Pac. Rep. 425; Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296; Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828; Poutra v. Martin, —— Tex. Civ. App. ——, 135 S. W. Rep. 725.

10 "We think the law is well settled that a plaintiff can not declare on one theory and recover on another. It is a well-established rule of evidence that the testimony offered must correspond with the allegations in the complaint, and not show an entirely different state of facts." So, it is held that, under a complaint alleging that defendants had wrongfully erected and maintained dams across the natural outlet of a lake, causing the waters of the lake to overflow and damage plaintiff's land, proof that such dams were erected under a contract with the plaintiff and others constituted a fatal variance, and that the plaintiff could not recover. Peay v. Salt Lake City, 11 Utah 331, 40 Pac. Rep. 206.

See, also, Equitable Securities Co. v. Montrose etc. Co., 20 Colo. App. 465, 79 Pac. Rep. 747.

A defendant can not complain of the variance between the pleadings and the proof, resulting from the Court relieving the defendant of the duty of meeting a part of the allegations of the complaint. Frederick v. Hale, 42 Mont. 153, 112 Pac. Rep. 70.

Where the defect in the complaint was cured by the answer of the defendant, see Crowder v. McDonald, 21 Mont. 367, 54 Pac. Rep. 43.

11 For affirmative defenses, see Secs. 1688-1692.

12 Buel v. Chicago etc. Co., 81 Neb. 130, 116 N. W. Rep. 299.

13 Shurtliff v. Extension D. Co., 14 Idaho 416, 94 Pac. Rep. 574.

14 Jenkins v. Hooper Irr. Co., 13 Utah 100, 44 Pac. Rep. 829.

Where evidence was introduced as to damages accruing since the commence-

proof of correctness and time of taking are properly admitted in evidence to show the condition of the land and the works.[15] A tax list is held as inadmissible to prove the value of the land injured.[16]

Under the provisions of Section 5950 of the Revised Codes of Idaho, 1908, it is held that the courts of that State will take judicial notice of the laws of Nature, and in such cases resort for their aid and information to appropriate books and documents of reference.[17]

§ 1694. **Instructions to the jury.**—As in other actions for damages, the questions of negligence and the measure of damages are for the consideration of the jury under proper instructions of the Court.[1] In an action for damages for diverting water from an irrigation ditch, an instruction that, where the Court in a former action had found certainly upon any point that had arisen in the action at bar, its finding must control, and was conclusive upon the parties thereto, was held erroneous, as leaving to the jury the construction of the findings of the Court, which the Court should have construed and explained to the jury.[2] A requested instruction, in an action against a water company for refusal to furnish water to an applicant, that before the company was required to deliver the water the applicant must make necessary provision for receiving it was properly refused, where the refusal of the company was not based on that ground.[3] It is held to be improper for the Court to

ment of the action, but was afterward withdrawn, and the jury instructed not to consider it, there was no error. Gotelli v. Cardelli, 26 Nev. 382, 69 Pac. Rep. 8.

15 Pickett v. Atlantic Coast Line R. Co., 153 N. C. 148, 69 S. E. Rep. 8.

16 Oldenburg v. Oregon Sugar Co., 39 Ore. 564, 65 Pac. Rep. 869.

17 Petajaniemi v. Washington W. & Pr. Co., —— Idaho ——, 124 Pac. Rep. 783.

1 The Court should instruct the jury as to the measure of damages, including the elements of damage involved; and hence, in an action for damages to land by flooding through the breaking of defendant's reservoir, the Court should have instructed on its own motion as to plaintiff's measure of damages. Mustang etc. Co. v. Hissman, 49 Colo. 308, 112 Pac. Rep. 800.

Error of an instruction, in putting on plaintiff too high a degree of proof, is harmless, his right of recovery depending on negligence, of which there was no proof, he taking the position that plaintiff was an insurer. Fleming v. Lockwood, 36 Mont. 384, 92 Pac. Rep. 962, 14 L. R. A., N. S., 628, 13 Am. & Eng. Ann. Cas. 263.

2 Dalton v. Kelsey, 58 Ore. 244, 114 Pac. Rep. 464.

See, also, Colorado Springs etc. R. Co. v. Albrecht, —— Colo. App. ——, 123 Pac. Rep. 957.

3 Lowe v. Yolo etc. Co., 157 Cal. 503, 108 Pac. Rep. 207.

charge that the doctrine of contributory negligence was not applicable to the case if defendant knew of the danger to the plaintiff's premises and could have prevented the injury.[4]

An instruction in an action for damages from the breaking of an irrigation ditch, as follows: "In this connection the Court further instructs the jury that it is incumbent upon the defendant company to construct its flumes and ditches in such a reasonable and prudent manner as that no damage will result to persons whose lands are crossed by the ditch," was held to be erroneous as making the ditch owner an insurer.[5]

The instructions given by the Court must be read together, and are sufficient if, when so read, they appear to cover the whole case and state correctly the law applicable thereto.[6] It is not error for the Court to refuse a correct instruction, where other appropriate instructions on the same subject have been given.[7] Where an instruction does not fully set forth the issues as fully as counsel for a party desires, he must offer an instruction to meet his views, or he can not complain on appeal.[8]

**§ 1695. Verdict—Non-suit.**—After hearing the evidence, except in cases which are tried before the Court alone, a jury having been waived, and the Court having instructed the jury, the case must be submitted to them for their verdict.

In deciding a motion for a non-suit or a directed verdict for the defendant, the Court should take the plaintiff's evidence as ad-

[4] Malmstrom v. People's Drain D. Co., 32 Nev. 246, 107 Pac. Rep. 98; distinguishing Shields v. Orr. D. Co., 23 Nev. 349, 47 Pac. Rep. 194.

An instruction that plaintiff could not recover if her own carelessness in the management of her estate contributed to her injury—there being no evidence to that effect—was erroneous. Emison v. Owyhee D. Co., 37 Ore. 577, 62 Pac. Rep. 13.

[5] King v. Miles City Irr. D. Co., 16 Mont. 463, 41 Pac. Rep. 431, 50 Am. St. Rep. 506.

[7] Billings Realty Co. v. Big Ditch Co., 43 Mont. 251, 115 Pac. Rep. 828.

[8] Frederick v. Hale, 42 Mont. 153, 112 Pac. Rep. 70.

"The measure of damages for destruction of apple trees planted and growing is what such destroyed trees were worth on the premises in their growing state, and the jury in determining this may consider the difference in the value of the land with and without such growing trees thereon at the time of the destruction." Hanes v. Idaho Irr. Co., —— Idaho ——, 122 Pac. Rep. 859.

mitted, and every reasonable inference from any fact should be regarded as proved; and, if all the facts and permissible inferences would sustain a verdict for the plaintiff, the motion should be denied. It is only proper to sustain such a motion for a nonsuit or directed verdict for the defendant, where the Court would be compelled to set aside a verdict if rendered for the plaintiff. In cases where reasonable men might differ in their conclusions, it is improper for the Court to take the case away from the jury.[1]

In their verdict, the jury must determine the liability of the defendant; and, if they find against him, they must assess the damages which the plaintiff has sustained.[2]

**§ 1696. Judgments—Measure of damages.**—The judgment in an action for damages must be entered on the verdict of the jury, or the decision of the Court, in accordance with the practice of the jurisdiction where the action was tried.[1]

1 "It is only where the facts are such that a verdict for plaintiff would compel the Court to set it aside that a non-suit is properly granted." Paolini v. Fresno etc. Co., 9 Cal. App. 1, 97 Pac. Rep. 1130.

"In a case where reasonable men might, upon deliberation, differ in their conclusions, it would be improper for the Court to interfere with the verdict." Chidester v. Consolidated D. Co., 59 Cal. 197.

In an action for damages against a railroad company for injury from changing the course of plaintiff's irrigation ditch, a verdict for $600 held to be not excessive nor a result of passion or prejudice. Denver etc. R. Co. v. Heckman, 45 Colo. 470, 101 Pac. Rep. 976.

2 For measure of damages, see Secs. 1696-1702.

1 A judgment for a specified amount, and costs, is not void as to the costs because the amount thereof is left blank, since it may be afterward inserted by the clerk. Big Goose etc. Co. v. Morrow, 8 Wyo. 537, 59 Pac. Rep. 159, 80 Am. St. Rep. 955.

Where plaintiff notified defendant not to take water from his premises and that he would demand $50 for every day the notice was violated, and afterward obtained a decree restraining defendant from taking the water, the taking of the water after the notice was held not an acceptance of a proposition to sell at that specified price. Wright v. Sonoma County, 156 Cal. 475, 105 Pac. Rep. 409, 134 Am. St. Rep. 140.

See, also, Sommerville v. Idaho Irr. Co., —— Idaho ——, 123 Pac. Rep. 302, where an irrigation company entered into a contract with a settler to furnish such settler with water and it was unable to furnish such water for the settler's tract of land, it was held that the correct measure of damages included such damages as the settler had sustained by reason of the expense incurred, labor performed, or any outlay of time which he had made under the contracts, and which he had

In actions where the jury find for the plaintiff, the jury may assess the compensatory damages against the defendant, which the plaintiff has actually sustained, and which are the direct and proximate result of the defendant's unlawful act.[2] And, in certain cases, they may assess nominal damages,[3] or punitive or exemplary damages.[4] In our discussion of the measure of compensatory damages, we will discuss the subject under the heads of damages for injury to lands, both for the total or partial destruction thereof;[5] damages for the loss of stock;[6] and damages for the loss of crops by reason of the failure of a company, under public duty or contract to furnish a consumer with water, or for the unlawful diversion of the water by another. In this connection, we will add here, that as far as compensatory damages are concerned, it makes no difference as to whether the plaintiff's failure to get the water to which he was entitled was the result of the violation of a duty either imposed by statute or contract, or was the result of the unlawful diversion of the water by the defendant. In any case, the plaintiff is entitled to complete and full compensation for the injuries sustained by him as the direct result of the unlawful act of the defendant.

As is the case in all actions at law, costs are usually awarded to the prevailing party. But in mixed actions at law and in equity the costs may be apportioned between the respective parties as may to the Court seem just and equitable.[7]

**§ 1697. Compensatory damages—Measure of damages for injuries to lands.**—The measure of compensatory damages for injuries to land depends, of course, upon the value of the land before the injury, and the nature and extent of the injuries thereto, that

suffered by reason of the failure of the company to comply with the terms of the same, and in addition thereto all payments on the land and water right, with interest thereon.

See, also, Reinking v. Goodell, —— Iowa ——, 133 N. W. Rep. 774; Fairbanks etc. Co. v. Stites, —— Tex. Civ. App. ——, 125 S. W. Rep. 636.

[2] For compensatory damages, see Secs. 1697-1701.

[3] See Sec. 1703.

[4] See Sec. 1702.

[5] See Sec. 1697.

[6] See Sec. 1699.

[7] For costs in equitable actions, see Sec. 1562.

See, also, Hoyt v. Hart, 149 Cal. 722, 87 Pac. Rep. 569; Big Goose etc. Co. v. Morrow, 8 Wyo. 537, 59 Pac. Rep. 159, 80 Am. St. Rep. 955; Hill v. Standard M. Co., 12 Idaho 223, 85 Pac. Rep. 907.

is to say, whether there has been a total or only a partial destruction, and whether the injuries are permanent or only temporary.

A total destruction of land may be illustrated by a case where there is a permanent dam or other obstruction constructed in a stream which permanently backs up or overflows the lands of the plaintiff. In such a case, as far as the owner is concerned, there is a total destruction of the land, and the measure of damages is the actual value of the land permanently submerged by the works of the defendant just before the injury occurred, and the depreciation of the value of the remainder of the plaintiff's land by reason of said flowage.[1]

Lands may also be permanently injured by the acts of the defendant, but still there may not be a total destruction of the value thereof to the plaintiff. Such is the case where there is an injury to the land from the seepage of water from an irrigation ditch which is a permanent structure and properly constructed, and where, although the land affected can not be used for the raising of crops, it may be used for pasture or for some other purpose. Again, lands may be permanently injured but not totally destroyed by the sudden breaking out of the water from a ditch, canal, or reservoir, which results in covering the land of the plaintiff with sediment and debris, or the washing off of the soil, or the cutting of gullies therein. In such a case the measure of damages for the injury to the land is the difference between the value of the land immediately

[1] The measure of damages for permanently overflowing plaintiff's land is the value of the land submerged, and the depreciation in the value of the remainder of the land by reason thereof. Hall v. Austin, 20 Tex. Civ. App. 59, 48 S. W. Rep. 53; Missouri etc. Co. v. Graham, 12 Tex. Civ. App. 54, 33 S. W. Rep. 576; Sweeney v. Montana Cent. R. Co., 25 Mont. 543, 65 Pac. Rep. 912; Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14; Town of Norman v. Ince, 8 Okla. 412, 58 Pac. Rep. 632.

The measure of damages for the permanent destruction of an irrigation ditch is held in Colorado to be the difference between the values of the land irrigated with and without the ditch. Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322.

See, also, Sacramento etc. Co. v. Heilbron, 156 Cal. 408, 104 Pac. Rep. 979, where it is held that the measure of damages for land taken by condemnation is its market value in view of all the purposes to which it is adapted, and while evidence that it is valuable for particular purposes is admissible, its money value for any particular purposes, as for nursery purposes, can not be shown in determining its market value.

See, also, Pick v. Rubicon Hydraulic Co., 27 Wis. 423.

before and immediately after the injury accrued.[2] But in the measure of damages a distinction must be made between the permanent destruction of the land in question, and for the permanent or temporary injury to it.[3] Again, where there is a permanent destruction of the land, or a permanent injury to the land, it constitutes but one cause of action, and all the damages must be assessed in one action. There can be no second recovery in such a case where the permanent damages have been once assessed in a previous suit.[4]

2 The seepage and leakage being a necessary result of the character of the soil, the injury arising therefrom was a permanent one, and the measure of damages was the diminished value of the land. Consolidated etc. Co. v. Hamlin, 6 Colo. App. 341, 40 Pac. Rep. 582.

The measure of damages for injury to land, by its being covered with sediment and debris by being flooded by the breaking of a reservoir, is the difference between the value of the land before and immediately after the injury, and not the reasonable cost of clearing the land, though evidence of such cost would be admissible to aid in determining such difference in the value of the land. Mustang etc. Co. v. Hissman, 49 Colo. 308, 112 Pac. Rep. 800.

If the land is permanently injured but not totally destroyed, the owner will be entitled to recover the difference between the actual cash value of the land at any time immediately preceding the consummation of the injury and the actual cash value of the land in the condition it was immediately after the injury, with legal interest thereon to the time of trial. Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296.

See, also, Middlekamp v. Bessemer Irr. Co., 46 Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795; Oldenburg v. Oregon Sugar Co., 39 Ore. 564, 65 Pac. Rep. 869; Shurtliff v. Extension D. Co., 14 Idaho 416, 94 Pac. Rep. 575; French v. West Seattle etc. Co., 50 Wash. 257, 97 Pac. Rep. 60; Missouri etc. R. Co. v. Graham, 12 Tex. Civ. App. 54, 33 S. W. Rep. 576; Watson v. Colusa-Parrot etc. Co., 31 Mont. 513, 79 Pac. Rep. 14; San Antonio v. Horkan, —— Tex. Civ. App. ——, 45 S. W. Rep. 391; Texas C. R. Co. v. Brown, —— Tex. ——, 86 S. W. Rep. 659; Barrows v. Fox (Cal.), 30 Pac. Rep. 768; *Id.*, 98 Cal. 63, 32 Pac. Rep. 811; Pallett v. Murphy, 131 Cal. 192, 63 Pac. Rep. 366; Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562, 1058.

See, also, Colorado Springs etc. Co. v. Albrecht, —— Colo. App. ——, 123 Pac. Rep. 957, where it is held that the amount of damages to real estate by flooding or overflow is fixed by the difference in the value of the property before and after the injury.

3 Shurtliff v. Extension D. Co., 14 Idaho, 416, 94 Pac. Rep. 574; Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296.

4 "When the structure itself is permanent, and is the cause of the injury, the injury is permanent, and all damages are to be recovered in one action, the right to which accrued with the beginning of the injury." Middlekamp v. Bessemer Irr. D. Co., 46

Again, the injuries to the land may not be permanent, but may be temporary or comparatively slight in character. Such would be the case where the water broke out from a ditch, or canal, or reservoir, and caused erosion on the plaintiff's land, but not to such an extent but that the land, with small expense, could be restored to its former condition. In such a case the plaintiff is entitled to recover the amount necessary to repair the injury and put the land in the condition that it was in immediately preceding the injury.[5]

The measure of damages in an action for breach of contract for failing to keep the plaintiff's ditch in repair is the money paid by the plaintiff for such repairs.[6] And, where on account of such temporary injuries to the land, the plaintiff was prevented from raising a crop, the difference between the rental value of the land immediately preceding the injury and the rental value immediately after the injury is the proper measure of damages.[7]

In a recent case in Nevada, where the fact was that a stand of alfalfa, which ordinarily would produce two crops per year for many years, was destroyed by the failure of the defendant company to furnish water for the same, the Court, although not very defi-

Colo. 102, 103 Pac. Rep. 280, 23 L. R. A., N. S., 795.

Having recovered damages for such permanent injury to the land, no further action, by reason of the continuance of the nuisance, will lie. Consolidated etc. Co. v. Hamlin, 6 Colo. App. 341, 40 Pac. Rep. 582.

See, also, Cumberland & Oxford Canal Co. v. Hitchings, 65 Me. 140; Van Hoozier v. Hannibal etc. R. Co., 70 Mo. 145.

[5] If the land is temporarily but not permanently injured, the owner is entitled to recover the amount necessary to repair the injury, with legal interest thereon to the time of trial. Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296.

See, also, Sweeney v. Montana Cent. R. Co., 25 Mont. 543, 65 Pac. Rep. 912; Shurtliff v. Extension D. Co., 14 Idaho 416, 94 Pac. Rep. 574; Malmstrom v. People's etc. Co., 32 Nev. 246, 107 Pac. Rep. 98.

[6] Orr Water Ditch Co. v. Reno Water Co., 19 Nev. 60, 6 Pac. Rep. 72; Hayden v. Consolidated etc. Co., 3 Cal. App. 136, 84 Pac. Rep. 422; Denver etc. Co. v. Heckman, 45 Colo. 470, 101 Pac. Rep. 976.

But that this is not the measure of damages where the injury to the land is permanent, see Mustang etc. Co. v. Hissman, 49 Colo. 308, 112 Pac. Rep. 800.

[7] "We think it is well established by the authorities that for temporary injuries to land, where one is simply prevented from raising a crop, the rental value is the proper measure of damages." Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296.

For measure of damages for injuries to crops, see Sec. 1698.

nite as to the measure of damages, held that the injury was to the realty itself, "and would amount at least to the value of the seed planted to produce the stand."[8] It seems to us that the true measure of damages in this case was the full rental value of the land before the injury, during the full period of time that it took to replace the stand of alfalfa in practically the same condition that it was before the injury, as while this was being done the land could not be used for anything else.

In actions for damages which are temporary and recurring, the plaintiff is not limited to one action, but he may recover in successive actions damages which will compensate him for the actual injury which he has sustained in each case.[9] He may, however, recover in one action all damages from recurring causes up to the time of the commencement of the action, which are not barred by the statute of limitations.[10]

**§ 1698. Compensatory damages—Measure of damages for injuries to crops.**—One of the most common causes of action for damages is that for the destruction of, or injury to, the crops of the plaintiff. The measure of compensatory damages, which the plaintiff in such an action is entitled to recover for the loss of or injury to crops is the same, and that, too, whether he bases his action upon the breach of a contract with a water company for the failure to furnish water as agreed, or upon the violation of a duty imposed upon such company as a quasi-public corporation,[1] or whether the action is based upon a tort, caused by the negligent construction, maintenance, or operation of the works of the defendant, so that the water overflows, breaks out, or seeps the lands of the plaintiff, and from which direct and proximate cause his crops are injured or destroyed. And, where the defendant is liable for such injuries, the plaintiff is entitled to recover an amount that will fully compensate him for all injuries sustained in this respect. But

[8] Candler v. Washoe etc. Co., 28 Nev. 151, 80 Pac. Rep. 751.

[9] Sulens v. Chicago etc. R. Co., 74 Iowa 659, 38 N. W. Rep. 545, 7 Am. St. Rep. 501; St. Louis etc. Co. v. Brown, 34 Ill. App. 552; Cobb v. Smith, 38 Wis. 21; Savannah etc. Co. v. Bourquin, 51 Ga. 378.

[10] Goodrich v. Dorset Marble Co., 60 Vt. 280, 13 Atl. Rep. 636; Watson v. Colusa etc. M. Co., 31 Mont. 513, 79 Pac. Rep. 14.

[1] For ditch and canal companies as quasi-public corporations, and their duties, see Secs. 1493-1502.

the plaintiff is entitled to recover for only the injuries for which the defendant is directly liable. Therefore, in Hawaii, where, by decree, the plaintiffs were held to be entitled to a certain amount of water at certain times, and it appeared that the defendants diverted a portion of the plaintiffs' water, but as the plaintiffs had not upon their part complied with the order of the commissioners to clean out the water course, and had allowed the defendants to neglect to furnish the water on the designated days, it was held that the amount of the damages which the plaintiffs could recover was proportionately lessened.[2]

But, as to the method of the measurement of such damages, and the basis upon which they should be estimated, the authorities seem to differ somewhat. Some of the authorities hold that the proper basis for the estimation of damages for the loss of growing crops is the difference between the rental value of the land with the water and its rental value without it.[3]

Other authorities hold that the proper basis for the measurement of damages is the value of the crops that would have been produced under ordinary conditions, less the expense that would have been incurred in planting, raising, harvesting, and marketing.[4]

Both methods have their merits and their difficulties. It is certain that the full rental value of the land is not the proper measure of damages unless the owner thereof is deprived of the entire use of his land. And, when the owner's injury arises, not from being entirely deprived of the use of the land, but only from the impairment of its use, the allowance of the full rental value, without deducting the benefits derived from such use as he could make of it,

2 Mele v. Ahuna, 6 Hawn. 346.

See, also, Lum Ah Lee v. Ah Soong, 16 Hawn. 163.

3 Pallett v. Murphy, 131 Cal. 192, 63 Pac. Rep. 366; Ferrea v. Chabot, 63 Cal. 564; *Id.*, 121 Cal. 233, 53 Pac. Rep. 689; Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562; Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296; Reisert v. New York, 74 N. Y. Supp. 673, 69 App. Div. 302.

4 Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254; Barstow Irr. Co. v. Cleghon, 41 Tex. Civ. App. 531, 93 S. W. Rep. 1020; Knowles v. Leggett, 7 Colo. App. 265, 43 Pac. Rep. 154; Colorado Canal Co. v. Sims, 42 Tex. Civ. App. 442, 94 S. W. Rep. 365; Gulf etc. R. Co. v. Nicholson, 25 S. W. Rep. 54; Raywood etc. Co. v. Wells, 32 Tex. Civ. App. 401, 77 S. W. Rep. 253; Chicago etc. R. Co. v. Emmert, 53 Neb. 237, 73 N. W. Rep. 540, 68 Am. St. Rep. 602; Northern Colo. Irr. Co. v. Richards, 22 Colo. 450, 45 Pac. Rep. 423.

would be manifestly unjust.[5] Therefore, where the rental value is taken as the basis of computation, as stated by the California Court, it is: "The difference between the rental value of the land with the water and its rental value without it."[6]

In California it was held that the proper measure of damages for the refusal of a water company to furnish water either in accordance with the terms of a contract, or under its statutory duty to furnish the water upon proper application and a payment or tender of the legal rates, is the difference between the rental value of the land with the water and its rental value without it, after deducting the lawful price of the water; and that uncertain and speculative profits, from crops, which might or might not have been raised, and which might or might not have been realized had they been raised, can not be recovered in such actions.[7] This rule for assessing damages may be proximately correct, where the land is planted or sown to annual crops. But, where the land is planted to perennial crops or to fruit trees there may be other damages which should be considered. It takes a number of years to bring fruit trees to the bearing point. Yet, after they have been brought to this point, by being deprived of the water for a single year, or even for a portion of a year, they may die, and the expense and labor of years be lost to the owner; or, again, their bearing capacity may be so impaired that it may take a number of years with sufficient water to bring them back to their former condition. There-

[5] Northern Colo. Irr. Co. v. Richards, 22 Colo. 450, 45 Pac. Rep. 423.

[6] Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562.

[7] "The measure of damages arising from a breach of contract or in tort is the detriment proximately caused thereby. . . . The proper measure of damages in a case like this is the difference between the rental value of the land with the water and its rental value without it, and the lawful price of the water should also be taken into consideration and deducted. . . . Conjectural profits of the kind sought here can not be recovered as damages in such cases. They must be damages capable of ascertainment by proof to a reasonable certainty. Uncertain and speculative profits, which might or might not have been realized, are not recoverable in such action." Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562.

"The evidence objected to and received by the Court was confined to the rental value of the land with and without water for irrigation. Evidence as to the value of a possible crop that might be grown with the use of water would be as purely speculative as could well be imagined." Pallett v. Murphy, 131 Cal. 192, 63 Pac. Rep. 366.

fore, damage to growing trees or to perennial crops is damage to the realty itself, for which a recovery may be had.[8] So, the California Court has modified the above rule in assessing damages in cases of this nature, and holds that damages for injuries to fruit trees and growing crops are not too remote, and that such injuries may be assessed as special damages.[9] But it seems to us that the Court could, with all propriety, have gone still further and still

8 "The Court found, because of the failure of the defendant to furnish water as agreed, that the stand of alfalfa and timothy was in the main killed out. The damage thus resulting was damage to the realty itself." Candler v. Washoe etc. Co., 28 Nev. 151, 80 Pac. Rep. 751.

9 "As to the amount of damages: This only applies to the $1,000, which the Court found the plaintiff had suffered to trees, and the fruit crop thereon, by reason of the defendant's failure to furnish the water as agreed. It is insisted by appellants that such damages are too remote and speculative. The Court found that, when the contract between the parties was made the defendants knew that the 10 inches of water contracted for had a peculiar value to the plaintiff, inasmuch as his land and orchard were of little value without it. The orchard was in bearing when the breach of the covenant was committed, and there was no other source from which the plaintiff could obtain water for irrigation. There is no question but what the amount of damages awarded was suffered, and we think that, under the facts as found, the Court was warranted in making the award." Roberts v. Crafts, 141 Cal. 20, 74 Pac. Rep. 281.

In a late action founded on tort for the flooding of plaintiff's land, the California Court held that the proper measure of damages was the value of the crop in the condition it was in at the time and place of destruction. Dennis v. Crocker-Huffman etc. Co., 6 Cal. App. 58, 91 Pac. Rep. 425.

See, also Hewitt v. San Jacinto etc. Co., 124 Cal. 186, 56 Pac. Rep. 893; Barrows v. Fox, 30 Pac. Rep. 768; *Id.* 98 Cal. 63, 32 Pac. Rep. 811; Thomas v. Bolsa Land Co., 1 Cal. App. 335, 82 Pac. Rep. 207; Bacon v. Kearney Vineyard Syndicate, 1 Cal. App. 275, 82 Pac. Rep. 84; Williams v. Harter, 121 Cal. 47, 53 Pac. Rep. 405; Teller v. Bay Cities etc. Co., 151 Cal. 209, 90 Pac. Rep. 942, 12 L. R. A., N. S., 267; Sacchi v. Bayside Lbr. Co., 13 Cal. App. 72, 108 Pac. Rep. 885; Lester v. Highland Boy etc. Co., 27 Utah 470, 76 Pac. Rep. 341, 101 Am. St. Rep. 988, 1 Am. & Eng. Ann. Cas. 761.

Land prepared for alfalfa will produce several crops each year for several years without further care, except by way of irrigation, and the measure of damages of one who just having prepared his land for alfalfa, and cutting the first crop, was wrongfully denied water for irrigation by a water company, whereby he lost two additional crops, which, with irrigation, the land would have produced that year, and a reseeding was necessary, is the value of the two crops, less cost of irrigation, plus cost of reseeding. Lowe v. Yolo County etc. Co., 157 Cal. 503, 108 Pac. Rep. 207; affg. *Id.* 8 Cal. App. 167, 96 Pac. Rep. 379.

have kept within the law, and have considered such injuries as permanent injuries to the land—at least where trees are destroyed there is a permanent injury to the land—and the Court might have held, under the general rule for the measure of such damages, that the true measure was the difference in the value of the land with the live, growing trees thereon, just prior to the injury and its value immediately after the trees were destroyed.[10]

The correct rule, as it seems to us, was held in a late Idaho case,[11] and is set forth as follows: "The measure of damages for destruction of apple trees planted and growing is what such destroyed trees were worth on the premises in their growing state, and the jury in determining this may consider the difference in the value of the land with and without such growing trees thereon at the time of destruction."

In Colorado the rule for the assessment of damages for the failure of a company to furnish water under its statutory duty, was held by the Court to be "the difference between the amount realized from the crops the land did produce without the water, and the amount that would have been realized therefrom had the water been furnished, less the added cost of raising, harvesting, and marketing the product, the loss of trees," and the loss of that portion of the owner's farm which he was thereby prevented from cultivating; but that he was not entitled to recover damages for permanent improvements, or for the depreciation in the value of live stock and farm implements, although the expenses for such were made on the faith of receiving the water for the suceeding season.[12] In Arizona the actual loss to plaintiff's crops is also held to be the true measure of damages, and are held not too "fanciful, speculative, or remote."[13] The same rule for the measurement of such

[10] For the measure of damages for permanent injuries to land, see Sec. 1697.

See, also, Sacchi v. Bayside Lbr. Co., 13 Cal. App. 72, 108 Pac. Rep. 885.

[11] Hanes v. Idaho Irr. Co., —— Idaho ——, 122 Pac. Rep. 859.

[12] Northern Colo. Irr. Co. v. Richards, 22 Colo. 450, 45 Pac. Rep. 423; Colorado etc. Co. v. Hartman, 5 Colo. App. 150, 38 Pac. Rep. 62; Tubbs v. Roberts, 40 Colo. 498, 92 Pac. Rep. 220.

Evidence merely as to the amount of crops which could have been raised if the proper amount of water had been furnished, together with evidence of the market value of such crops, is insufficient as a basis for recovery, without proof of the cost of raising and marketing the crops. Knowles v. Leggett, 7 Colo. App. 265, 43 Pac. Rep. 154.

[13] Miller v. Douglass, 7 Ariz. 41, 60 Pac. Rep. 722.

damages is adopted by the courts of Nevada,[14] Idaho,[15] Montana,[16] Nebraska,[17] New Mexico,[18] Texas,[19] South Dakota,[20] Oregon,[21] and also in Kansas, although it was there held that where the demand was not made until late in the season, the company was not liable for the entire loss for the year.[22] In Utah it is held that, in a

14 The measure of damages for the total destruction, or nearly total destruction, of growing crops which would to a reasonable certainty have matured, except for the defendant's wrongful act, is the value of the probable yield of the crops under proper cultivation when matured and ready for the market, less the estimated expense of producing, harvesting, and marketing them, including the expense of irrigation, and the value of any portion of the crops that may have been saved. Candler v. Washoe etc. Co., 28 Nev. 151, 80 Pac. Rep. 751.

The measure of damages for the total destruction of growing crops is the value of the probable yield of the crops under proper cultivation when matured and ready for the market, less the estimated expense of harvesting the same, including the expense necessary for irrigation, and the value of any portion of the crops that may have been saved. Malmstrom v. People's etc. Co., 32 Nev. 246, 107 Pac. Rep. 98.

15 Where there was a total destruction of plaintiff's crops, an instruction to the jury that they should find for the plaintiff the reasonable value of the said crop at maturity, less the reasonable cost of irrigating, caring for, and harvesting the same, was held proper. Rios v. Azcuenaga, 19 Idaho 739, 115 Pac. Rep. 922; see, also, Risse v. Collins, 12 Idaho 689, 87 Pac. Rep. 1006; Gagnon v. Molden, 15 Idaho 727, 99 Pac. Rep. 965.

16 The value of crops, and the expense of maturing, reaping, threshing, and moving them to market, are competent facts to be considered in arriving at the measure of damages to crops by the overflowing of a stream, caused by negligence in driving logs. Hopkins v. Butte etc. Co., 16 Mont. 356, 40 Pac. Rep. 865.

20 Nebraska etc. Co. v. Burris, 10 S. D. 430, 73 N. W. Rep. 919.

21 Anderson v. Adams, 43 Ore. 621, 74 Pac. Rep. 215; see instruction given by the trial court.

22 Western Irr. Co. v. Chapman, 8 Kan. App. 778, 59 Pac. Rep. 1098.

suit for damages for flooding certain ice ponds used for putting up ice, the proper measure of damages is the value of the ice that might have been put up with reasonable diligence, less the cost of putting it in the ice house.[23] In Washington, in an action for injury to crops by defendant's refusal to furnish water, evidence that the net value of the plaintiff's crops raised in each of certain specified years was less than a stated sum than it would have been had plaintiff been furnished with the water as agreed was competent, and showed substantial damage from defendant's breach of contract, but judgment by the trial court for $2,100 was modified to $500 by the Supreme Court.[24]

Interest prior to the recovery of judgment for damages for the failure to secure water should not be allowed, such damages being unliquidated and uncertain until the same shall have been adjudicated.[25]

**§ 1699. Compensatory damages—Measure of damages for the loss of stock.**—Where the defendant is liable at all for the damages caused by the loss of live stock, he is liable for their full market value at the time of the loss.[1] And, it is held that a ditch company, with the right to maintain a ditch over the lands of another, is liable to the land owner for injury to his stock, which is caused by the negligence of the company, in not properly protecting the ditch from the cattle, or in permitting a dangerous washout to occur and remain a considerable time, into which cattle fell therein.[2] But it is held in Colorado that where the defendant con-

But see Hayward v. Mason, 54 Wash. 649, 104 Pac. Rep. 139; *Id.* 54 Wash. 653, 104 Pac. Rep. 141, where in each case it was held that there was no liability upon the part of the defendant.

See, also, Ulrich v. Pateros W. Ditch Co., —— Wash. ——, 121 Pac. Rep. 818.

[25] Ferrea v. Chabot, 121 Cal. 233, 53 Pac. Rep. 689; Anderson v. Adams, 43 Ore. 621, 74 Pac. Rep. 215.

But see Young v. Extension D. Co., 13 Idaho 174, 89 Pac. Rep. 296.

[1] Big Goose etc. Co. v. Morrow, 8 Wyo. 537, 59 Pac. Rep. 159, 80 Am. St. Rep. 955.

[2] Big Goose etc. Co. v. Morrow, 8 Wyo. 537, 59 Pac. Rep. 159, 80 Am. St. Rep. 955, wherein it is said: "It is an old and familiar maxim that one must so use his own property as not to

structed an irrigation ditch across land on which the plaintiff had a right of pasturage, and the plaintiff knew that the condition of the ditch was such that his stock were likely to become mired therein, he took the risk of such injury, and could not recover for such loss in an action against the ditch owner.[3]

**§ 1700. Compensatory damages—Measure of damages for loss of power.**—Compensatory damages may be recovered for the loss of power, where such loss is occasioned by the unlawful diversion of the water which generates such power. The measure of such damages is held to be the market value of the power actually taken.[1] Or, where other power is substituted, it is held that the measure of damages is the reasonable cost to the plaintiff of the substituted power.[2]

**§ 1701. Compensatory damages—Measure of damages for loss of or injury to a water right.**—Damages may also be recovered for the loss of or the injury to a water right, separate and apart from any considerations of the injury to the land,[1] or injuries to crops.[2] Such would be a case of a grantor conveying by warranty deed a water right for which he had no title. The measure of damages in an action for the breach of the warranty or contract is the value of the water right.[3] So, also, where, after the lease of water to the plaintiff by the defendant, a third person was decreed to be

injure that of other persons—'*Sic utere tuo ut alienum non laedas*'—and, in our opinion, plaintiff in error is not exempt from its application.''

See, also, Hopkins v. Butte etc. Co., 16 Mont. 356, 40 Pac. Rep. 865.

3 Messenger v. Gordon, 15 Colo. App. 429, 62 Pac. Rep. 959.

See, also, Heinlen v. Fresno etc. Co., 68 Cal. 35, 8 Pac. Rep. 513.

1 Green Bay etc. Co. v. Kaukauna etc. Co., 112 Wis. 323, 87 N. W. Rep. 864, 62 L. R. A. 579.

2 The measure of damages for wrongfully preventing the use of a water power is the reasonable cost of the steam power used as a substitute during such time. Hottell v. Farmers' etc. Assn., 25 Colo. 67, 53 Pac. Rep. 327, 71 Am. St. Rep. 109.

1 For the measure of damages for injuries to land, see Sec. 1697.

2 For measure of damages for injuries to crops, see Sec. 1698.

3 In a case involving damages for the failure of a vendor to furnish a certain number of inches of water to be furnished by a ditch company, under his warranty deed, and the company refused to furnish the water, it was held that no other measure of damages was competent than the value of the water. Starbird v. Jacobs, 46 Colo. 507, 105 Pac. Rep. 872, the Court saying: ''The case at bar is not different in principle than it would be if

the owner of a part of the leased water right, so that the plaintiff was deprived of such part, the plaintiff is entitled to damages for the loss.[4] But it is held in Washington that, where the owners of land contract to sell it together with certain water rights and are unable to transfer title to the water rights, the purchaser in a suit for damages can recover moneys paid on the purchase price and expenses legitimately incurred in pursuance of the contract, but is not entitled to damages for the loss of the bargain.[5]

§ 1702. **Exemplary or punitive damages.**—Under certain circumstances, exemplary or punitive damages may be awarded the plaintiff and against the defendant. This is true where the defendant has been guilty of oppression, fraud, or malice. So, a public service corporation guilty of fraud, oppression, or malice, in failing to furnish water, to the extent of its actual supply, is liable to

the question in dispute were as to the title of the land itself."

In Idaho, in an action for damages caused by reason of the failure of the defendant to comply with his contract "to convey and deliver to the second party," upon his land, "a water right of 100 inches of water," the Court held, that the proper measure of damages is the difference between the contract price for the water and the water right and its delivery upon the land, and the price it would cost to purchase a like water right and equal number of inches of water delivered upon the land at the time of the breach of the contract; and that, if however, it should appear that no water right could be purchased either at the time of the breach or at any time thereafter prior to the trial, evidence as to the value of the buildings and other improvements made by the owner of the land might be introduced in the case in order to arrive at the actual damages sustained through and on account of the breach of the contract. And, in this connection, that it would be proper and necessary to prove how much the plaintiff had paid on the contract, "because, if he is not to receive the consideration, he should, among other things, receive the money paid by him on the contract." Gagnon v. Molden, 15 Idaho 727, 99 Pac. Rep. 965.

[4] Tilton v. Sterling etc. Co., 28 Utah 173, 77 Pac. Rep. 758, 107 Am. St. Rep. 689.

The measure of damages for the loss of the use of water by the wrongful acts of another is the value of the water in the market for irrigation purposes. North Point etc. Co. v. Utah etc. Co., 23 Utah 199, 63 Pac. Rep. 812.

See, also, Mack v. Jackson, 9 Colo. 536, 13 Pac. Rep. 542; Calkins v. Sorosis Fruit Co., 150 Cal. 426, 88 Pac. Rep. 1094; Farmers' etc. Co. v. New Hampshire etc. Co., 40 Colo. 467, 92 Pac. Rep. 290.

But see Stevens v. Wadleigh, 5 Ariz. 90, 46 Pac. Rep. 70.

[5] Babcock-Cornish Co. v. Urquhart, 53 Wash. 168, 101 Pac. Rep. 713.

exemplary damages within the California Civil Code, Section 3294, providing that in an action for the breach of an obligation not arising from contract exemplary damages may be recovered, where the defendant has been guilty of oppression, fraud, or malice. Therefore, in a case arising in California, where $500, as exemplary damages, was awarded the plaintiff, in a case where it was proven that the defendant was guilty of malice and undue oppression in not furnishing the plaintiff with water, under its duty as a public service corporation, the Court of Appeals said: "We can see no good reason for holding that the appellant is an exception to the rule which imposes an additional penalty for fraud, oppression, or malice."[1] And the Supreme Court in affirming the judgment said: "As said before, there is in all this clearly sufficient support for the conclusion that the defendant was guilty of oppression and malice."[2] In order to have exemplary damages awarded, the pleadings and proof must show such a state of fraud, malice, or oppression, as to warrant such a judgment, and the plaintiff in his complaint must ask that they be awarded. The theory upon which they are granted is that the defendant has been guilty of such acts as deserve punishment, and that such a judgment will be an example to others to refrain from such acts. Under the proper pleadings and proof the question of exemplary damages is addressed to the discretion of the jury, or the Court trying the case without a jury, where the evidence legally warrants a judgment of such damages. Upon appeal, the Supreme Court will not ordinarily, at least, undertake to control that discretion by requiring the assessment of such damages.[3] But, where the evidence does not show such a state of facts as above stated, such damages should not be awarded.[4]

1 Lowe v. Yolo County etc. Co., 8 Cal. App. 167, 96 Pac. Rep. 379, aff'd. 157 Cal. 503, 108 Pac. Rep. 297.

2 See, also, Greenberg v. Western Turf Assn., 140 Cal. 358, 73 Pac. Rep. 1050; Hagerman Irr. Co. v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

3 "Such damages . . . are in the discretion of the jury, where the facts are such as legally warrant them." 4 Sutherland on Damages, 1031.

Hagerman Irr. Co. v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

4 "We think, therefore, in the absence of evidence that it was done with the intent to injure plaintiff, or wantonly and in disregard of whether

**§ 1703. Nominal damages.**—In cases where there has been clearly an invasion of a right, but no actual damages are proven, nominal damages may be awarded.[1] So, it is held that a riparian owner who uses an unreasonable amount of the water is liable for at least nominal damages, in an action by another riparian owner lower down the stream whose riparian rights are affected.[2] But he can not recover damages for injury such a diversion does to his non-riparian lands.[3]

**§ 1704. New trial—Appeal.**—A motion for a new trial may be made upon the grounds as specified by the statute of the jurisdiction where the action was tried. In all motions for a new trial the statute must be strictly followed, as to time and procedure.[1]

Usually these cases are appealed to some appellate court, and oftentimes to the court of last resort, as is witnessed by the many cases cited in the notes of the preceding sections of this chapter. The statute of the State where the action is tried must be strictly followed. The questions involved may be reviewed in the same manner by the Appellate Court that may be reviewed in other actions at law. If error is committed by the trial court, in the admission of testimony, or in its instructions to the jury, the usual practice is to reverse the judgment and remand the case to the trial court for a new trial. If, upon the other hand, the Appellate Court finds

it might work injury to her or not, no case is made out for exemplary damages." Ladd v. Redle, 12 Wyo. 362, 75 Pac. Rep. 691.

Mabb v. Stewart, 133 Cal. 556, 65 Pac. Rep. 1085; *Id.* 147 Cal. 413, 81 Pac. Rep. 1073.

1 The evidence did not require a finding of any more than nominal damages for the plaintiff. Hagerman Irr. Co. v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

See, also, Rohwer v. Chadwick, 7 Utah 385, 26 Pac. Rep. 1116; Mack v. Jackson, 9 Colo. 536, 13 Pac. Rep. 542; Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254; Creighton v. Evans, 53 Cal. 55, 8 Morr. Min. Rep. 123; Ladd v. Redle, 12 Wyo. 362, 75 Pac. Rep. 691.

2 Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254; Parker v. Griswold, 17 Conn. 288.

3 Heinlein v. Fresno etc. Co., 68 Cal. 35, 8 Pac. Rep. 513.

See, also, for injunctions without proof of damages, Sec. 1606.

1 Denver etc. R. Co. v. Heckman, 45 Colo. 470, 101 Pac. Rep. 976.

no error which affects the substantial rights of the parties, the judgment of the trial court will be affirmed.[2]

2 A judgment in favor of defendants will not be reversed where it appears that the plaintiff was merely entitled to nominal damages; the statute requiring a new trial to be granted for causes "affecting the substantial rights of a party." Ladd v. Redle, 12 Wyo. 362, 75 Pac. Rep. 691.

But see Hagerman Irr. Co. v. McMurry, 16 N. M. 174, 113 Pac. Rep. 823, where the judgment, as rendered by the trial court was corrected to include $1, as nominal damages, in accordance with the findings of the trial court, and as corrected, the judgment was affirmed.

Chapter 14. DEFINITIONS AND DESCRIPTIONS OF WATERS.. 292-323

271540

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART IV.

### RIGHTS OF THE PUBLIC IN WATERS AND WATER COURSES.

SECTIONS
Chapter 15. MISCELLANEOUS PUBLIC RIGHTS..... 324-340
Chapter 16. THE RIGHT OF NAVIGATION..... 341-357
Chapter 17. RIGHT OF FISHING AND HUNTING..... 358-371
Chapter 18. DEDICATION BY A STATE OF ITS WATERS..... 372-389

## PART V.

### ACQUISITION AND DISPOSAL OF LANDS AND WATERS BY THE UNITED STATES.

Chapter 19. ACQUISITION OF LANDS AND WATERS BY THE UNITED STATES..... 390-407
Chapter 20. DISPOSAL OF LANDS AND WATERS BY THE UNITED STATES..... 408-449

## PART VI.

### THE COMMON LAW GOVERNING WATERS.

Chapter 21. THE NATURE OF RIPARIAN RIGHTS..... 450-456
Chapter 22. UPON WHAT LANDS RIPARIAN RIGHTS ATTACH 457-466
Chapter 23. TO WHAT WATERS RIPARIAN RIGHTS ATTACH 467-475
Chapter 24. WHO ARE RIPARIAN PROPRIETORS..... 476-482
Chapter 25. RIGHT TO THE USE OF WATERS..... 483-497
Chapter 26. IRRIGATION AS A RIPARIAN RIGHT..... 498-525
Chapter 27. GRANTS AND CONTRACTS OF RIPARIAN RIGHTS 526-535
Chapter 28. VARIOUS RIPARIAN RIGHTS..... 536-551

## PART VII.

### THE CIVIL LAW GOVERNING WATERS.

Chapter 29. THE ROMAN CIVIL LAW..... 552-569
Chapter 30. THE CIVIL LAW IN THE UNITED STATES..... 570-584

## PART VIII.

### THE APPROPRIATION OF WATER FOR BENEFICIAL USES.

Chapter 31. ARID REGION DOCTRINE OF APPROPRIATION.. 585-594
Chapter 32. HISTORY OF DOCTRINE OF APPROPRIATION.... 595-626

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## VOLUME TWO.

SECTIONS

Chapter 33. TWO THEORIES AS TO LEGAL RIGHT..... 627-640
Chapter 34. WHAT WATERS MAY BE APPROPRIATED..... 641-669
Chapter 35. ON WHAT LANDS DIVERSION MAY BE MADE.. 670-677
Chapter 36. WHO MAY APPROPRIATE WATER..... 678-689
Chapter 37. THE PURPOSE OF THE APPROPRIATION..... 690-705
Chapter 38. METHODS OF APPROPRIATION WITHOUT CODE 706-732
Chapter 39. REASONABLE DILIGENCE..... 733-741
Chapter 40. THE DOCTRINE OF RELATION..... 742-756

## PART IX.

### THE NATURE, EXTENT, AND CHARACTER OF RIGHTS ACQUIRED TO WATER BY APPROPRIATION, RIGHTS OF WAY, AND THE POLLUTION OF WATERS.

Chapter 41. THE NATURE AND CHARACTER OF A WATER RIGHT ..... 757- 774
Chapter 42. RIGHTS TO WATER AS BETWEEN APPROPRIATORS ..... 775- 803
Chapter 43. APPROPRIATION AS AGAINST CONGRESSIONAL GRANTS ..... 804- 809
Chapter 44. APPROPRIATION AS AGAINST RIPARIAN RIGHTS ..... 810- 823
Chapter 45. MEANS OF THE USE AND CHARACTER OF THE WORKS ..... 824- 836
Chapter 46. RESERVOIR AND STORAGE RIGHTS..... 837- 846
Chapter 47. MILL AND POWER RIGHTS..... 847- 855
Chapter 48. CHANGES WHICH MAY BE MADE..... 856- 873
Chapter 49. ECONOMICAL USE AND THE SUPPRESSION OF WASTE ..... 874- 916
Chapter 50. CONTRACTS RELATING TO WATER RIGHTS.... 917- 926
Chapter 51. RIGHTS OF WAY OVER PUBLIC DOMAIN..... 927- 971
Chapter 52. RIGHTS OF WAY OVER PRIVATE LANDS..... 972- 993
Chapter 53. SALE AND ALIENATION OF WATER RIGHTS AND RIGHTS OF WAY..... 994-1032
Chapter 54. RIGHTS ACQUIRED BY PRESCRIPTION..... 1033-1058
Chapter 55. RIGHTS ACQUIRED BY EMINENT DOMAIN.... 1059-1098
Chapter 56. ABANDONMENT AND FORFEITURE..... 1099-1120
Chapter 57. THE DOCTRINE OF ESTOPPEL..... 1121-1128
Chapter 58. THE POLLUTION OF WATERS..... 1129-1147

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART X.

### SUBTERRANEAN WATERS AND RIGHTS ACQUIRED THERETO.

SECTIONS

Chapter 59. SUBTERRANEAN WATERS IN GENERAL—CLASSIFICATION ..... 1148-1152
Chapter 60. SUBTERRANEAN WATER COURSES..... 1153-1165
Chapter 61. ARTESIAN WATERS..... 1166-1184
Chapter 62. PERCOLATING WATERS..... 1185-1211

---

# VOLUME THREE.

## PART XI.

### INTERNATIONAL, INTERSTATE, FEDERAL, STATE, DISTRICT, AND MUNICIPAL CONTROL.

Chapter 63. INTERNATIONAL CONTROL..... 1212-1220
Chapter 64. INTERSTATE CONTROL..... 1221-1234
Chapter 65. THE NATIONAL RECLAMATION ACT..... 1235-1286
Chapter 66. THE DESERT LAND ACTS..... 1287-1311
Chapter 67. THE CAREY LAW..... 1312-1336
Chapter 68. THE LAWS OF STATE CONTROL..... 1337-1367
Chapter 69. STATE CONTROL OF WATER RATES..... 1368-1385
Chapter 70. STATE IRRIGATION DISTRICT LAWS..... 1386-1432
Chapter 71. CONTROL BY MUNICIPAL CORPORATIONS..... 1433-1448

## PART XII.

### CONTROL BY PRIVATE WATER COMPANIES.

Chapter 72. SUBJECT IN GENERAL AND CLASSIFICATION OF PRIVATE WATER COMPANIES..... 1449-1452
Chapter 73. UNINCORPORATED COMPANIES..... 1453-1463
Chapter 74. ORGANIZATION AND POWERS OF CORPORATIONS ..... 1464-1478
Chapter 75. MUTUAL WATER CORPORATIONS..... 1479-1489
Chapter 76. CORPORATION FOR PROFIT..... 1490-1508
Chapter 77. CONTRACTS WITH COMPANIES..... 1509-1529

Volume I contains Secs. 1-626; Volume II, Secs. 627-1211; Volume III, Secs. 1212-1704; Volume IV, Secs. 1705-2129.

## PART XIII.

### ADJUDICATION AND PROTECTION OF RIGHTS—INJURIES TO RIGHTS AND REMEDIES THEREFOR.

SECTIONS

Chapter 78. THE ADJUDICATION OF WATER RIGHTS IN EQUITY ..... 1530-1566
Chapter 79. STATUTORY ADJUDICATION OF WATER RIGHTS 1567-1584
Chapter 80. DETERMINATION OF WATER RIGHTS BY BOARDS ..... 1585-1595
Chapter 81. PROTECTION OF RIGHTS BY INJUNCTION..... 1596-1647
Chapter 82. PROTECTION BY MISCELLANEOUS ACTIONS.. 1648-1659
Chapter 83. ACTIONS FOR DAMAGES..... 1660-1704

---

# VOLUME FOUR.

## PART XIV.

### SPECIAL FEATURES AND STATUTORY LAWS OF THE ARID AND SEMI-ARID STATES.

Chapter 84. ALASKA ..... 1705-1710
Chapter 85. ARIZONA ..... 1711-1723
Chapter 86. CALIFORNIA ..... 1724-1768
Chapter 87. COLORADO ..... 1769-1804
Chapter 88. HAWAII ..... 1805-1816
Chapter 89. IDAHO ..... 1817-1843
Chapter 90. KANSAS ..... 1844-1861
Chapter 91. MONTANA ..... 1862-1880
Chapter 92. NEBRASKA ..... 1881-1899
Chapter 93. NEVADA ..... 1900-1923
Chapter 94. NEW MEXICO..... 1924-1941
Chapter 95. NORTH DAKOTA..... 1942-1957
Chapter 96. OKLAHOMA ..... 1958-1972
Chapter 97. OREGON ..... 1973-1997
Chapter 98. PHILIPPINE ISLANDS..... 1998-2009
Chapter 99. PORTO RICO..... 2010-2023
Chapter 100. SOUTH DAKOTA..... 2024-2039
Chapter 101. TEXAS ..... 2040-2053
Chapter 102. UTAH ..... 2054-2075
Chapter 103. WASHINGTON ..... 2076-2096
Chapter 104. WYOMING ..... 2097-2129

# TABLE OF CONTENTS.

## VOLUME FOUR.

### COMPLETE TABLE OF CONTENTS OF VOLUME FOUR BY SECTIONS AND PAGES.

### PART XIV.

### SPECIAL FEATURES AND STATUTORY LAWS OF THE ARID AND SEMI-ARID STATES.

#### CHAPTER 84.

#### ALASKA.

SECTIONS PAGES

1705. Particular features of the district....3147
1706. The use of water in the district....3148
1707. Criticism of the Alaska laws....3149
1708. Appropriation of water....3150
1709. Rights of way and condemnation therefor....3151
1710. Riparian rights in Alaska....3152

#### CHAPTER 85.

#### ARIZONA.

1711. Particular features of the State....3154
1712. Irrigation in the State....3155
1713. Constitutional provisions....3157
1714. Criticism of the Arizona laws....3158
1715. Title to water—Water rights defined....3159
1716. The appropriation of water....3160
1717. Reservoir rights....3161
1718. The right and method of appropriation....3161
1719. Ditches and canals and rights of way therefor....3162

*The Index references are to pages.*

SECTIONS PAGES
1720. Overseers of acequias or public ditches....3163
1721. Corporations and companies....3164
1722. Criminal statutes....3165
1723. Riparian rights in Arizona....3166

## CHAPTER 86.

## CALIFORNIA.

1724. Particular features of the State....3168
1725. Irrigation in the State....3168
1726. Criticism of the California laws....3171
1727. State constitutional provisions....3176
1728. Administrative officers....3180
1729. Title to and the right to appropriate water....3182
1730. The appropriation of water—Notice—Construction of works....3186
1731. Appropriation and ownership of waters by municipalities....3192
1732. An Act regulating the appropriation of water for power purposes....3194
1733. The adjudication and protection of water rights....3196
1734. Ditches and canals and rights of way therefor....3199
1735. Servitudes upon land....3201
1736. The sale and transfer of water rights and easements and appurtenances....3202
1737. Acquisition of title by prescription....3204
1738. The right of eminent domain....3205
1739. Eminent domain—Public uses for which right may be exercised....3207
1740. Eminent domain—Classification of estates subject to be taken....3209
1741. Eminent domain—Private property which may be taken....3210
1742. Eminent domain—Facts necessary to be found before property can be taken....3211
1743. Eminent domain—Procedure and jurisdiction....3211
1744. The establishment of water rates for cities and towns....3216
1745. The establishment of water rates for other than cities and towns....3216
1746. Water corporations and companies—Duty to furnish water....3220
1747. Water corporations and companies—Mutual corporations....3222
1748. Water corporations and companies—Power to contract for services....3223
1749. Artesian wells and subterranean waters....3224
1750. An Act to prevent the waters of the State from being carried into other States....3226
1751. The use of water for hydraulic mining....3226
1752. An Act establishing the conservation commission....3227
1753. An Act for the protection of the navigability of the State waters....3228
1754. Acts regulating the extraction of mineral from waters....3228
1755. The irrigation district law....3228

*The Index references are to pages.*

SECTIONS PAGES
1756. Municipal water districts—Act of April 26, 1909....3233
1757. Reclamation districts—Drainage....3236
1758. Levee districts....3244
1759. Protection districts....3244
1760. Overflow districts....3245
1761. Storm water districts....3246
1762. Provisions in aid of the National Reclamation Act....3246
1763. Nuisances relating to waters....3247
1764. The pollution of waters....3248
1765. Construction and repair of bridges....3248
1766. Taxation of waterworks....3249
1767. Criminal statutes....3249
1768. Riparian rights in California....3251

## CHAPTER 87.

## COLORADO.

1769. Particular features of the State....3253
1770. Irrigation in the State....3255
1771. Criticism of the Colorado laws....3256
1772. Constitutional provisions....3258
1773. Title to waters and the right of appropriation and use of waters....3263
1774. Division of the State and administrative officers....3267
1775. The appropriation of water....3272
1776. The standard of measurement....3274
1777. Ditches and canals—Measuring devices....3275
1778. Ditches and canals—Rights of way therefor....3278
1779. Ditches and canals—Special proceedings to change point of diversion....3281
1780. Sale and conveyance of water rights....3283
1781. Reservoirs and reservoir rights....3283
1782. State canals and reservoirs and the control thereof....3287
1783. The sale of State land to secure irrigation on other lands....3290
1784. The distribution and use of water....3291
1785. Ditch, reservoir, flume, and pipe line corporations—Organization....3293
1786. Ditch, etc., corporations—Duties, rights, and powers....3295
1787. Ditch, etc., companies—When compelled to furnish water....3297
1788. Regulating rates and charges for water....3299
1789. Anti-royalty Act....3302
1790. The adjudication of rights—Jurisdiction....3303
1791. The adjudication of rights—Procedure....3305
1792. The adjudication of rights—The decree and judgment....3308

*The Index references are to pages.*

SECTIONS PAGES
1793. The adjudication of rights—Appeal—Independent suits—Re-argument and review....3311
1794. Damages from leakage or overflow....3314
1795. Liens on ditches, canals, and other works....3315
1796. The irrigation district law....3316
1797. The Carey Act in Colorado....3320
1798. The drainage of lands....3322
1799. Drainage districts....3323
1800. Acts in aid of the National Reclamation Act....3326
1801. The pollution of waters....3329
1802. Criminal statutes....3329
1803. Taxation of irrigation works....3331
1804. Riparian rights in Colorado....3332

## CHAPTER 88.

## HAWAII.

1805. Particular features of the Territory....3336
1806. Irrigation in the Territory....3337
1807. Criticism of the Hawaiian laws....3337
1808. Title to waters—Taxing of water....3338
1809. The appropriation of water....3338
1810. Eminent domain—Rights of way for ditches and canals....3339
1811. Commissioners—Power of....3340
1812. The adjudication of water rights—Procedure....3342
1813. The adjudication of water rights—Hearing—Decision and record....3343
1814. The adjudication of water rights—Appeal....3344
1815. Artesian wells of the Island of Oahu....3344
1816. Riparian rights in Hawaiian Islands....3345

## CHAPTER 89.

## IDAHO.

1817. Particular features of the State....3346
1818. Irrigation in the State....3348
1819. Criticism of the Idaho laws....3350
1820. State constitutional provisions....3351
1821. Water rights—Defined—Nature of property in water—Standard of measurement....3354
1822. Administrative officers—State Board of Irrigation....3356
1823. Administrative officers—State engineer, his powers and duties....3357
1824. State administrative officers—Water divisions—Water commissioners and their powers and duties....3358

*The Index references are to pages.*

SECTIONS PAGES
1825. State administrative officers—Water districts—Water masters and their powers and duties....3358
1826. Headgates and measuring devices....3359
1827. The appropriation of water....3360
1828. The adjudication of existing rights....3362
1829. Reservoir rights....3364
1830. Fixing water rates....3364
1831. Rights of way—Condemnation proceedings....3365
1832. Liability for injuries....3366
1833. Maintenance and repair of works....3367
1834. Corporations—General powers and duties—Statements....3367
1835. Corporations—License required before selling water....3368
1836. Corporations—Distribution of water to consumers....3369
1837. The Carey Act in Idaho....3372
1838. Irrigation district law....3374
1839. Provisions in aid of the National Reclamation Act....3376
1840. Floating logs and timber upon streams....3377
1841. Qualifications of engineers....3378
1842. Criminal statutes....3378
1843. Riparian rights in Idaho....3379

## CHAPTER 90.

## KANSAS.

1844. Particular features of the State....3380
1845. Irrigation in the State....3381
1846. Criticism of the Kansas laws....3382
1847. Constitutional provisions—Title to water....3383
1848. The right of appropriation of water—Transfer of right....3383
1849. The appropriation of water—Standards of measurement....3385
1850. The adjudication of rights....3386
1851. Ditches and canals and rights of way therefor....3386
1852. Corporations and companies....3388
1853. The condemnation of water rights....3389
1854. The right to the use of water—Distribution of water....3391
1855. Reservoir rights....3393
1856. Water rates....3393
1857. Irrigation district law....3394
1858. Board of irrigation survey and experiment—Experiments....3396
1859. Artesian well Acts....3397
1860. Criminal statutes....3398
1861. Riparian rights in Kansas....3399

*The Index references are to pages.*

## CHAPTER 91.

## MONTANA.

SECTIONS PAGES
1862. Particular features of the State....3401
1863. Irrigation in the State....3402
1864. Criticism of the Montana laws....3403
1865. State constitutional provisions....3404
1866. Water rights defined, etc.—The right to appropriate water....3405
1867. The appropriation of water—Appropriation from adjudicated streams....3406
1868. The adjudication of existing rights....3408
1869. Standard of measurement....3409
1870. Administrative officers—State engineer....3410
1871. Ditches and canals and rights of way therefor....3410
1872. Reservoir rights....3411
1873. The distribution of water....3412
1874. Corporations and companies....3413
1875. Irrigation districts....3415
1876. The Carey Act in Montana....3417
1877. Provisions in aid of the National Reclamation Act....3418
1878. The pollution of waters....3418
1879. Criminal statutes....3419
1880. Riparian rights in Montana....3419

## CHAPTER 92.

## NEBRASKA.

1881. Particular features of the State....3420
1882. Irrigation in the State....3421
1883. Criticism of the Nebraska laws....3422
1884. Water rights—Defined—Title to water—Priority....3423
1885. Administrative officers....3425
1886. The measurement of water—Standard of measurement....3426
1887. The appropriation of water....3427
1888. Determination of existing priorities....3428
1889. Proceedings for the forfeiture of rights....3429
1890. Reservoir rights....3429
1891. Distribution of water....3430
1892. Ditches and canals—Rights of way—Condemnation proceedings....3430
1893. Irrigation corporations and companies—Duties and powers of....3431
1894. Sale and conveyance of water rights....3432
1895. Provisions in aid of the National Reclamation Act....3433
1896. Irrigation district law in Nebraska....3433

*The Index references are to pages.*

SECTIONS PAGES
1897. Pollution of waters....3435
1898. Criminal statutes....3435
1899. Riparian rights in Nebraska....3436

## CHAPTER 93.

## NEVADA.

1900. Particular features of the State....3438
1901. Irrigation in the State....3439
1902. Criticism of the Nevada laws....3442
1903. State constitution—Water rights—Standards of measurement....3442
1904. Administrative officers—State Board of Irrigation....3444
1905. Administrative officers—State engineer—His powers and duties....3445
1906. Administrative officers—Water commissioners....3446
1907. The appropriation of water—Applications and protests....3446
1908. The appropriation of water—The permit or refusal thereof....3447
1909. The appropriation of water—Independent suits....3448
1910. The appropriation of water—The certificate....3449
1911. The determination of existing rights....3449
1912. Determination of existing rights—Independent suits....3450
1913. Ditches, canals, and rights of way for the same....3451
1914. The installation of measuring devices....3453
1915. Protecting highways from damage....3453
1916. Administrative officers—Bureau of Industry, Agriculture, and Irrigation....3453
1917. Corporations and companies—Water rights....3454
1918. The Carey Act in Nevada....3455
1919. Irrigation district law....3456
1920. Provisions in aid of the National Reclamation Act....3458
1921. Prohibiting the pollution of waters....3458
1922. Criminal statutes....3459
1923. Riparian rights in the State....3460

## CHAPTER 94.

## NEW MEXICO.

1924. Particular features of the State....3462
1925. Irrigation in the State....3463
1926. Criticism of the New Mexico laws....3465
1927. Constitutional provisions....3465
1928. Title to water—Rights of appropriation—Abandonment....3467
1929. The appropriation of water....3468
1930. Administrative officers....3470
1931. Ditches, canals, and other works—Rights of way....3472
1932. The standard of measurement—Distribution of water....3472

*The Index references are to pages.*

SECTIONS PAGES
1933. The adjudication of existing rights....3473
1934. Reservoir rights....3474
1935. Artesian wells and regulation....3475
1936. Provisions in aid of the National Reclamation Act....3478
1937. Corporations and companies—Water users' associations....3478
1938. Irrigation district law....3480
1939. The Carey Act in New Mexico....3480
1940. Criminal statutes....3481
1941. Riparian rights in New Mexico....3481

## CHAPTER 95.

## NORTH DAKOTA.

1942. Particular features of the State....3483
1943. Irrigation in the State....3484
1944. Criticism of the North Dakota laws....3485
1945. State constitutional provisions—Water courses defined....3486
1946. Water rights defined—Abandonment....3486
1947. Division of the State and administrative officers....3487
1948. The appropriation of water....3488
1949. The adjudication of existing rights....3490
1950. Water rates....3490
1951. The standard of measurement of water—The distribution of water....3491
1952. Ditches and canals—Rights of way and condemnation proceedings therefor....3491
1953. Irrigation works constructed by townships....3492
1954. Provisions in aid of the National Reclamation Act....3492
1955. The pollution of waters....3493
1956. Criminal statutes....3493
1957. Riparian rights in the State....3493

## CHAPTER 96.

## OKLAHOMA.

1958. Particular features of the State....3495
1959. Irrigation in the State....3495
1960. Criticism of the Oklahoma laws....3496
1961. State constitutional provisions....3496
1962. Title to water—Water rights defined....3497
1963. The right of appropriation—Condemnation of rights....3497
1964. Administrative officers....3498
1965. The appropriation of water....3499
1966. The adjudication of existing rights....3500
1967. Ditches and canals, etc., and rights of way therefor....3500
1968. Corporations and companies....3501

*The Index references are to pages.*

SECTIONS PAGES
1969. The standard of measurement and the distribution of water.....3501
1970. Provisions in aid of the National Reclamation Act.....3502
1971. Criminal statutes.....3503
1972. Riparian rights in Oklahoma.....3503

## CHAPTER 97.

## OREGON.

1973. Particular features of the State.....3505
1974. Irrigation in the State.....3506

SECOND EDITION—VOLUME FOUR.

# PART XIV.

## SPECIAL FEATURES AND STATUTORY LAWS OF THE ARID AND SEMI-ARID STATES.

### CHAPTER 84.

#### ALASKA.

§ 1705. Particular features of the district.
§ 1706. The use of water in the district.
§ 1707. Criticism of the Alaska laws.
§ 1708. Appropriation of water.
§ 1709. Rights of way and condemnation therefor.
§ 1710. Riparian rights in Alaska.

§ 1705. **Particular features of the district.**—Alaska is our most northerly possession. It is characterized by long winters, and extremely humid climate in summer, and other conditions that go to make up anything but a typical agricultural country. However, as we shall see in the following sections, agriculture is carried on, and to a considerable extent. The country is traversed by mountain ranges, gashed by deep gorges, through which the streams swiftly make their courses to the sea.

The Government has established scattered weather bureau and experiment stations in Alaska, and from these reports may be determined the approximate conditions of the climate of the district. From an examination of the meteorological reports it will be seen that there is a vast difference in temperature, precipitation, and weather conditions in different portions of the district. For example, at Sitka, during the month of July, 1910, there was a maximum temperature of 80° F., a minimum of 38° F., a daily mean of 54.5° F. During the same month there was a total precipitation of 3.74 inches. There were 5 clear days, 4 partly cloudy days, 22 cloudy days, and 20 days of rain or snow. During the month of August of 1910, there was a maximum temperature of

75° F., minimum of 40° F., daily mean of 55.3° F. The total precipitation was 3.35 inches. There were 9 clear days, 7 partly cloudy, 15 cloudy, and 13 with rain or snow. At the station of Rampart, during the month of July, 1910, the maximum temperature was 92° F., minimum 35° F., daily mean 61.1° F. There was .71 of an inch precipitation, and there were 4 clear days, 11 partly cloudy, 16 cloudy, and 8 days with rain or snow. At the same station during the following month of August, the maximum temperature was 85° F., minimum 27° F., daily mean of 56.6° F. The total precipitation was .62 of an inch. There were 9 clear days, 8 partly cloudy, 14 cloudy days, and 6 with rain or snow. At the station of Kodiak, during the month of July, 1910, the maximum temperature was 71° F., minimum 35° F., daily mean of 52.4° F. The total precipitation was 5.23 inches. There were 9 clear days, 13 partly cloudy, 9 cloudy, and 12 with rain or snow. During the following month of August, the maximum temperature was 78° F., minimum 37° F., daily mean 54.4° F. The total precipitation was 1.75 inches. There were 5 clear days, 20 partly cloudy, 6 cloudy, and 10 with rain or snow.[1] It will be noticed from the above figures that one of the most notable variations is in the precipitation for the months of July and August, for which compare that of Rampart and Kodiak with that of Sitka.

§ 1706. **The use of water in the district.**—The general impression throughout the country that Alaska is a land of icebergs, impassable mountain ranges, and bleak headlands is given a much softer tone by the annual report of the Alaska Agricultural Report for 1910.[1] Although there is practically no irrigation in the District

[1] See Annual Report of Alaska Agriculture Experiment Stations, for 1910, by C. C. Georgeson, special agent in charge, United States Department of Agriculture, office of Experiment Stations, Washington, 1911, pp. 76-85.

See, also the Water Supply of Nome Region, Seward Peninsula, Alaska, 1906, by John C. Hoyt; and Fred F. Henshaw, Water Supply and Irrigation Paper No. 196, United States Geological Survey, 1907.

See, also, Water Supply Investigations in Alaska, 1906-7, including the Nome and Kougarok Rivers, Seward Peninsula, Fairbanks District, Yukon-Tanana Region, by Fred F. Henshaw; and C. C. Covert, Water Supply Paper No. 218, United States Geological Survey, Washington, 1908.

[1] See said report by C. C. Georgeson, special agent in charge, Washington, 1911, under the supervision of the office of Experiment Stations, U. S. Dept. of Agriculture.

of Alaska, there is considerable agriculture. Grain of various kinds can be raised to maturity, berries of all kinds flourish, as well as all kinds of vegetables, and garden truck. Hay and grasses especially flourish, and stock raising promises to be the big industry of the rural population of Alaska. Cattle, horses, sheep, and hogs all thrive and withstand the severe winters. But as it is not our intent to go into this very deeply here, we will close this phase.

The principal industry in the District of Alaska at present, and likely to remain such, is that of mining of all classes. It is for this purpose that the waters of the streams are mostly used. Many water power plants are installed throughout the district, but the power generated is mostly used in some phase of mining operations. There are great opportunities for power development in case market can be found for the product. There are also great coal beds, which, owing to the present condition of our laws relative to Alaska, remain undeveloped and unexplored. Steps, however, are being taken to give Alaska a more generous law relative to the development of its coal mines.

§ 1707. **Criticism of the Alaska laws.**—The laws for the District of Alaska governing the use of the waters of natural streams or other bodies, as they stand at the present time, relate more to their use for mining, or as an incident to mining claims, than for any other purpose. There is no direct statute for the appropriation of waters for any use; however, there is a statute, which in terms grants the right of the exercise of the power of eminent domain for the construction of ditches, canals, and reservoirs over the private lands of others for the purpose of utilizing the water appropriated. The appropriation of water is governed by the local rules and regulations of the respective organized mining districts.[1] The situation in this respect in Alaska is somewhat analogous to that in California at an early day, which finally resulted in the Arid Region Doctrine of appropriation for all beneficial uses. As population increases and the requirements for the use of water become greater, as the resources of the country become developed, the same result will necessarily follow in Alaska, regardless of the nature of the use, so long as it be a beneficial one.

Alaska at the earliest possible date should be given a Territorial

[1] Thorndyke v. Alaska etc. Co., 164 Fed. Rep. 657, 90 C. C. A. 473.

form of government. The people there are very much dissatisfied at the present with the conditions of their laws. Being governed by Congress, at a distance of five thousand miles, is not as advantageous as that of a local government, duly organized in Territorial form.

§ 1708. **Appropriation of water.**—In the District of Alaska there is no statute which in terms grants the right to appropriate water. However, the right of appropriation is allowed, and provisions made for recording such claims. The district is divided into three divisions, and provisions made for the appointment of a clerk for the court of each division, who "shall be *ex officio* recorder of instruments."[1] And among the instruments required to be recorded are "notices and declaration of water rights."[2]

It is held by the Alaska Court that Sections 2339 and 2340, of the United States Revised Statutes, recognizing the right of appropriation of water for beneficial uses, does not apply to the District of Alaska, except so far as they relate to mining claims and rights incident thereto.[3] But as to appropriations for mining purposes, it is held that the above sections do apply.[4]

It is held that the right to appropriate water is governed by the code of local laws and rules governing the local mining districts. The rules of these districts follow largely the statute of California as to the right of and the details which must be followed in making an appropriation.[5]

[5] Thorndyke v. Alaska etc. Co., 164 Fed. Rep. 657, 90 C. C. A. 473.

For a copy of the rules and regulations of the Harris Mining District, see statement of facts in the above case.

§ 1709. **Rights of way and condemnation therefor.**—As regards rights of way for ditches, canals, and reservoirs over the public lands of the United States in the District of Alaska, the Right of Way Act of Congress of March 3, 1891,[1] does not apply. Neither do the subsequent Acts of Congress relative to rights of way over the public domain of the United States apply unless Alaska is specially mentioned in the Acts themselves.[2]

The right of eminent domain in the District of Alaska may be exercised in behalf of the following public uses: "Canals, aqueducts, flumes, ditches, or pipes conducting water, heat, or gas for the use of the inhabitants of any precinct, city, town, or other municipal division, whether incorporated or unincorporated";[3] also for "canals, ditches, flumes, aqueducts, and pipes for public transportation, supplying mines and farming neighborhoods with water, and draining and reclaiming lands, and for floating logs and lumber on streams not navigable, and sites for reservoirs necessary for collecting and storing water";[4] also, for "roads, tunnels, ditches, flumes, pipes, and dumping places for working mines; also outlets, natural or otherwise, for the flow, deposit, or conduct of tailings or refuse matter from mines; also an occupancy in common by the owners or possessors of different mines of any place for the flow, deposit, or conduct of tailings or refuse matter from their several mines, and sites for reservoirs necessary for collecting and storing water."[5]

1 6 Fed. Stat. Ann., pp. 508-510; 26 Stat. L. 1101.

For a full discussion of this Act, see Secs. 937-948.

2 For rights of way over public lands, see Chap. 51, Secs. 927-971.

The provisions of Secs. 18 to 21, inclusive, of the Act of March 3, 1891, granting rights of way through the public lands for canals, ditches, and reservoirs, have no application to lands within the District of Alaska. Miocene D. Co., 35 Land Dec. 297.

The Secretary of the Interior has never been clothed with general jurisdiction of the public lands in Alaska, his jurisdiction being limited, under the several Acts of Congress relating to such lands. Opinion Atty.-Gen., 30 Land Dec. 417.

Martin v. Burford, 181 Fed. Rep. 922, 104 C. C. A. 360.

3 1 Fed. Stat. Ann., 1903, p. 269, Sec. 204, Subd. 3; 31 Stat. L. 522.

4 1 Fed. Stat. Ann., 1903, p. 269, Sec. 204, Subd. 4; 31 Stat. L. 522.

See, also, Miocene D. Co. v. Lyng, 2 Alaska 265, 138 Fed. Rep. 544, 70 C. C. A. 458; Miocene D. Co. v. Jacobson, 146 Fed. Rep. 680, 77 C. C. A. 106.

5 1 Fed. Stat. Ann., 1903, p. 269, Sec. 204, Subd. 5; 31 Stat. L. 522.

The estates which may be acquired by such condemnation are prescribed as follows: "A fee simple, when taken for public buildings or grounds, or for permanent buildings, for reservoirs and dams, and permanent flooding occasioned thereby, or for an outlet for a flow, or a place for the deposit of debris or tailings of a mine."[6]

The private property which may be taken under the Act includes: All real property belonging to any person; lands belonging to the district, or to any precinct, city, town, or village; property appropriated to a public use, for a more necessary purpose; franchises; "all rights of way for any and all purposes mentioned in Section 204,[7] and any and all structures and improvements thereon, and the lands held and used in connection therewith, must be subject to be connected with, crossed, or intersected by any other right of way or improvements or structures thereon. They must also be subject to a limited use, in common with the owner thereof, when necessary; but such uses, crossings, intersections, and connections must be made in a manner most compatible with the greatest public benefit and the least private injury;" all classes of property not enumerated may be taken for public use when such taking is authorized by law."[8]

Parties desiring to condemn property are given the right to enter lands to make surveys.[9] All proceedings under the Act must be brought in the District Court of the district, and these proceedings are fully set forth in the Act itself.[10]

The plaintiff or defendant or any party interested in the proceedings is given the right of appeal to the United States Circuit Court of Appeals for the Ninth Circuit from any finding or judgment rendered under the Act, as in other cases.[11]

§ 1710. **Riparian rights in Alaska.**—As to whether or not the rights of riparian proprietors exist in Alaska seems to be somewhat undecided. Upon the one hand there has been no abrogation of the common law rule upon the subject by statute. It was also held

[6] 1 Fed. Stat. Ann., 1903, p. 270, Sec. 205, Subd. 1; 31 Stat. L. 523.

[7] *Supra.*

[8] 1 Fed. Stat. Ann., 1903, p. 270, Sec. 206, Subds. 1-6; 31 Stat. L. 523.

[9] 1 Fed. Stat. Ann., 1903, p. 270, Sec. 208; 31 Stat. L. 523.

[10] 1 Fed. Stat. Ann. 1903, pp. 271-275, Secs. 209-224.

[11] 1 Fed. Stat. Ann., 1903, Sec. 207; 31 Stat. L. 523.

in one case that riparian rights existed somewhat after the modified rule upon the subject as held by the California courts.[1] But, upon the other hand, it can be said that the common law rule does not exist to the extent that a riparian proprietor has the right to insist upon the undiminished flow of a stream, without use, from the very fact that the right of appropriation of water for beneficial uses is allowed, especially for the use in connection with mining claims. In the late case of Thorndyke v. Alaska etc. Co.[2] it was contended that riparian rights did exist, but the Court held that "from the pleadings of the parties we think it clear that no question of riparian rights arises in the case," and proceeded to decide the case wholly upon the theory of appropriation and abandonment of the same as between the parties.

In a still later case, decided by the United States Circuit Court of Appeals,[3] it was held that the common law doctrine of riparian rights does not apply to the Seward Peninsula of Alaska, and the Court, by Mr. Justice Ross, said: "The common law doctrine of riparian rights being wholly inconsistent with and antagonistic to that of appropriation, it necessarily follows that when the Federal and State Governments assented to, recognized, and confirmed, with respect to the waters upon the public lands, the doctrine of appropriation, they in effect declared that that of riparian rights did not apply. The doctrine of appropriation thus established was not a temporary thing, but was one born of the necessities of the country and its people, was the growth of years, permanent in its character, and fixed the status of water rights with respect to public lands. . . . We are of the opinion that the plaintiffs in error in the present case acquired, by virtue of the placer mining locations held by them, no riparian rights in or to the waters of Hurrah Creek. They undoubtedly had the right to appropriate such of the unappropriated waters of that stream as were needed in and for the working of their mining claims."

§ 1721. Corporations and companies.
§ 1722. Criminal statutes.
§ 1723. Riparian rights in Arizona.

**§ 1711. Particular features of the State.**—Arizona, the oldest irrigated region within the limits of the United States, where ancient and ruined systems of irrigating canals and reservoirs serve as models for modern work, is much interested in the subject of irrigation. The territory covered by the State has been inhabited at different times by three races of people, each making use of irrigation in agricultural operations. Of the first or prehistoric race very little is known. Evidence abounds that this race inhabited Arizona for an extended period, and had entirely vanished before the coming of the white man to America.[1] The second race was that of the Indians, who were practicing irrigation in a primitive manner at the advent of the white man. The third race is that of the white man, who has taken up and perfected the work of the former inhabitants.

The surface of the State is divided into two clearly defined regions. In the northern portion is a plateau with an elevation of from five to eight thousand feet. This plateau is mainly a level mesa, except where there are groups of volcanic mountains, rising above seven thousand feet, and in the San Francisco Mountains, attaining an elevation of 13,000 feet. The climate of the plateau region is typified by that of the city of Flagstaff, which has a mean

[1] For ancient irrigation in Arizona, see Secs. 81, 82.

annual temperature of about 45° F., and a rainfall of nearly 20 inches. The second region consists of broad valleys, separated by narrow, steep ranges, having a surface varying in altitude from nearly sea level to three thousand feet. The climatic conditions in this region are typified by those of the city of Phoenix, where the average temperature is about 69° F., or about the same as that of New Orleans, and the rainfall is five inches. There are but two river systems within the State—the Colorado and the Gila. The drainage area of the former and its tributaries comprise about one-half of the State. The drainage area of the Gila, with its numerous branches, is of far more importance agriculturally. The most of the agricultural and irrigable land is situated in the Gila basin.[2]

§ 1712. **Irrigation in the State.**—According to the meteorological reports for Arizona, we find from foothills to mountains an annual average precipitation of from 12 to 25 inches, and on the plains and mesas of the western and southern part of the State the very low average of from 3 to 12 inches. Hence, it follows for the greater part of the State irrigation is practiced as an absolute necessity to successful farming. Without irrigation this part of Arizona is a semi-tropical desert; with irrigation it is capable of sustaining a dense population, limited only by the water supply that can be secured by ditches, reservoirs, and wells, and by the wisdom shown in the distribution of water thus obtained. In the lower plains the temperature is such that crops will grow and mature in any season of the year, provided there is sufficient moisture, and in many respects this portion of the State is not unlike the shores of the Mediterranean, where irrigation is older than the his-

Surface Water Supply of the United States, 1907-8, Part IX, Colorado River Basin, prepared under the direction of M. O. Leighton, by W. B. Freeman and R. H. Bolster, Water-Supply Paper No. 249, U. S. Geological Survey, Washington, 1910.

Same as last above, Water-Supply Paper No. 269, U. S. Geological Survey, Washington, 1911.

tory of the race which now inhabits them. In the valley portion of the State irrigation is kept up during the entire year.

The area in the State under irrigation is confined largely to the watershed of the Gila River, wherein the greatest agricultural development has been made. The rivers tributary thereto lend themselves much more readily to the construction of canals and ditches and comprise much more available land, which will ultimately be reclaimed, than the drainage area of the Colorado River and its tributaries. The acreage at present under irrigation in Arizona may be regarded as approaching the maximum possible to the present supply of water, and the methods of using it. All the available water in the natural streams and lakes have been utilized, and any extended area can be brought under cultivation only by greater economy in using the existing supply or by the further adoption of systems of storage for the conservation of the flood waters now annually running to waste. There are a great many storage reservoir sites in the country, and irrigators are looking forward to this method as the most effectual means of obtaining relief from the troubles and uncertainties existing at present. The National Government has constructed two of its projects, the Salt River project and the Yuma project, authorized by the Reclamation Act.[1]

In the matter of practical irrigation, in most cases throughout the State, the water is applied by the flooding method, after the custom established by the Mexicans. This method is at best an exceedingly wasteful one, where there is such a scanty supply of water; and it has been demonstrated in many cases where too much water is used that better crops could be matured by using the water more sparingly. This would also have the effect of increasing the area under cultivation.

According to the Census Reports of 1910, the total number of farms irrigated in Arizona in 1909 was 4,509. Exclusive of Indian

1 See, also, Irrigation in the Salt River Valley, by W. H. Code, Special Agent of the United States, Report of Irrigation Investigations for 1900, No. 2. Reprint from U. S. Dept. of Agriculture, Office of Experiment Stations, Bulletin No. 104. Use of Water in Arizona, by W. H. Code, Reprint from the U. S. Dept. of Agriculture, Office of Experiment Stations, Bulletin No. 86, Irrigation Investigations in Salt River Valley, by W. H. Code, Reprint from U. S. Dept. of Agriculture, Office of Experiment Stations, Bulletin No. 119.

reservations the total was 3,847, against 2,981 in 1899, an increase of 866, or 29.1 per cent. The total acreage irrigated in 1909 was 320,051 acres, or, excluding Indian reservations, 300,665 acres, against 185,396 acres in 1899, an increase of 115,269 acres, or 62.2 per cent. The total acreage which all enterprises were capable of supplying with water in 1910 amounted to 387,655 acres, an increase of 67,604 acres over the area irrigated in 1909. The total acreage reported in projects completed and uncompleted, including those of the Government, was 944,090 acres, an increase of 624,039 acres over the area actually irrigated in 1909. This indicates in a general way the area which will be available for settlement within the next few years.

§ 1713. **Constitutional provisions.**—The new constitution of Arizona upon the subject of water rights has several provisions. Article XVII, Sections 1 and 2, provide:

"Sec. 1. The common law doctrine of riparian water rights shall not obtain or be of any force or effect in the State.

"Sec. 2. All existing rights to the use of any of the waters in the State for all useful or beneficial purposes are hereby recognized and confirmed."

Article XV, Sections 1 to 19, provide for the creation of a Corporation Commission, among whose duties, as prescribed by Sections 2 and 3, is to be found the following:

"Sec. 2. All corporations other than municipal engaged in carrying persons or property for hire, or in furnishing gas, oil, or electricity for light, fuel, or power, or in furnishing water for irrigation, fire protection, or other public purposes, or in furnishing, for profit, hot or cold air or steam for heating or cooling purposes, or in transmitting messages or furnishing public telegraph or telephone service, and all corporations other than municipal, operating as common carriers, shall be deemed public service corporations.

"Sec. 3. The Corporation Commission shall have full power to, and shall, prescribe just and reasonable classifications to be used, and just and reasonable rates and charges to be made and collected, by public service corporations within the State for service rendered therein, and make reasonable rules, regulations, and orders by which such corporations shall be governed in the transaction of business within the State," etc.

Article X, Section 5, also provides:

"Sec. 5. No lands shall be sold for less than three dollars per acre, and no lands which are or shall be susceptible of irrigation under any projects now or hereafter completed or adopted by the United States under legislation for the reclamation of lands, or under any other project for the reclamation of lands, shall be sold at less than twenty-five dollars per acre; provided, that the State, at the request of the Secretary of the Interior, shall from time to time relinquish such of its lands to the United States as at any time are needed for irrigation works in connection with any such Government project, and other lands in lieu thereof shall be selected from lands of the character named and in the manner prescribed in Section 24 of the said Enabling Act." [1]

Article XX, Section 10, provides:

"Tenth. There are hereby reserved to the United States, with full acquiescence of this State, all rights and powers for the carrying out of the provisions by the United States of the Act of Congress, entitled, 'An Act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands,' approved June 17, 1902, and Acts amendatory thereof or supplementary thereto, to the same extent as if this State had remained a Territory."

By the Enabling Act there was reserved to the United States and excepted from the operation from any and all grants made or confirmed by the Act to the proposed State, all lands of prospective value for the development of water power or power for hydroelectric use or transmission, which shall be ascertained and designated by the Secretary of the Interior, within five years after the proclamation of the President declaring the admission of the State.[2]

§ 1714. **Criticism of the Arizona laws.**—The two States of Arizona and New Mexico may be considered as constituting a sort of group somewhat separate from the other commonwealths of the arid region as regards their original laws regulating the water and

[1] For the Enabling Act, admitting Arizona to the Union, see Stats. of U. S., 2d Sess. 61st Cong., p. 557.

[2] See Enabling Act, Statutes of the United States, passed at the 2d Session, 61st Congress, 1909-1910, p. 575.

water rights within their respective jurisdictions. The early legislation of both of the Territories is somewhat similar, and both follow largely the old Spanish and Mexican laws upon the subject.[1] In New Mexico, by the adoption of the Water Code of 1907,[2] many of the Spanish and Mexican laws were abrogated relative to the subject, while in Arizona these old laws are still in full force and effect. Indeed, it is provided in the statute that the regulation of acequias, which have been worked according to the laws and customs of Sonora, shall remain as they were made and used up to the date of the passage of the Act, and should be enforced and observed.[3] It is to be expected that about the first legislature of the State of Arizona will follow the other States and enact a Water Code governing the subject of waters and water rights within the new State.

There are no special statutes now upon the subject of the adjudication of existing rights; but that subject is left entirely to the equity side of the courts under general provisions for equitable actions.

The legislature is to be criticised for its failure to enact earlier provisions for the acceptance and operation of the Carey Act. An irrigation district law should also have been enacted earlier. However, at the first session of the legislature of 1912, after the adoption of the constitution, Acts were enacted and approved accepting the provisions of the Carey Act, creating drainage districts, and also for the creation of irrigation districts. Enactments in aid of the National Reclamation Act should also have been passed, although this feature does not seem to have hindered the Government in projects in the Territory to any great extent.[4]

§ 1715. **Title to water—Water rights defined.**—In the Bill of Rights of the Territory of Arizona is to be found the following declaration:

"All streams, lakes, and ponds of water capable of being used for the purpose of navigation or irrigation are hereby declared to be public property; and no individual or corporation shall have the

1 For the Spanish and Mexican laws, see Secs. 570-584.

2 For the laws of New Mexico, see Chap. 94, Secs. 1924-1941.

3 Rev. Stats., 1901, Sec. 4199.

4 See Secs. 1235-1286.

right to appropriate them exclusively to their own private use, except under such equitable regulations and restrictions as the legislature shall provide for that purpose." [1]

In the statutes is found the further declaration:

"All rivers, creeks, and streams of running water in the Territory of Arizona are hereby declared public and applicable to the purposes of irrigation and mining, as herein provided." [2]

§ 1716. **The appropriation of water.**—The method of appropriation is simple and somewhat antiquated as compared with the method in the States having adopted water or irrigation codes. A notice of appropriation must be posted at the place of diversion on the stream, a copy of which must be filed and recorded in the office of the county recorder in which the dam, reservoir, or canal contemplated is to be constructed, and if the canal runs through more than one county, it must be filed and recorded in each county, and a copy of such notice must also be filed and recorded in the office of the secretary of the State. The appropriator must, "within a reasonable time thereafter, construct" the necessary works and use reasonable diligence to maintain the same, and a failure to do this shall be held to work a forfeiture of such right to the water or waters attempted to be appropriated.[1]

It is made unlawful for any one to obstruct the flow of streams by any works, except by erecting mills and machinery for mining purposes or for the reduction of metals, as the right to irrigate the fields shall be preferable to all others. Where reduction works or mining apparatus shall be placed upon lands previously held for agricultural purposes, the person or persons so holding such lands shall be entitled to remuneration for the damages caused thereby. When any ditch or acequia shall be taken out for agricultural purposes the party so taking out such ditch shall have the exclusive right to the water, or so much as may be necessary for his purpose, and if at any time the water so required shall be taken for mining operations, the person owning such water shall be entitled to damages.[2]

1 Rev. Stats., Ariz., 1901, Sec. 22.
2 Rev. Stats., Ariz., 1901, Sec. 4174.
1 Rev. Stats., 1901, Sec. 4170.
2 Rev. Stats., 1901, Secs. 4178-4180.

For the pollution of water by mining debris, see Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465.

§ 1717. **Reservoir rights.**—The right to construct reservoirs for the storage of waters is granted as well as the use of the natural channels of streams to conduct such stored water to the place of use, and to divert the same below. The quantity of water which may be again taken from the stream is subject to agreement of the interested parties. But, in case the parties can not agree upon the division of the water, it shall be distributed in the following manner: "There shall be ascertained the quantity of water which shall flow into said natural channel from the storage reservoir and from that quantity there shall be deducted one-half of one per centum for each one mile of length of the natural channel through which said water shall flow before being diverted therefrom." [1]

§ 1718. **The right and method of appropriation.**—"All the inhabitants of this Territory, who own or possess arable and irrigable lands, shall have the right to construct public or private acequias and obtain the necessary water for the same from any convenient river, creek, or stream of running water." [1]

It is also further provided that:

"Any person or persons, company or corporation shall have the right to appropriate any of the unappropriated waters or the surplus or flood waters in this Territory for delivery to consumers, rental, milling, irrigation, mechanical, domestic, stock or any other beneficial purpose," and they are given the right to construct and maintain reservoirs and the other necessary works for the same. "And the person or persons, company or corporation first appropriating water for the purposes herein mentioned shall always have the better right to the same." [2]

Rep. 493; Howard v. Perrin, 8 Ariz. 347, 76 Pac. Rep. 460; aff'd, 200 U. S. 71, 50 L. Ed. 374, 26 Sup. Ct. Rep. 195; Arizona Copper Co. v. Gillespie, 12 Ariz. 190, 100 Pac. Rep. 465; Austin v. Chandler, 4 Ariz. 346, 42 Pac. Rep. 483; Biggs v. Utah etc. Co., 7 Ariz. 331, 64 Pac. Rep. 494.

2 Rev. Stats., 1901, Sec. 4169.

See, also, Gould v. Maricopa etc. Co., 8 Ariz. 429, 76 Pac. Rep. 598; Salt River etc. Co. v. Nelssen, 10 Ariz. 9, 85 Pac. Rep. 117, 12 L. R. A., N. S., 711; Slosser v. Salt River etc. Co., 7 Ariz. 376, 65 Pac. Rep. 332; Hayois v. Salt River etc. Co., 8 Ariz. 285, 71 Pac. Rep. 944.

**§ 1719. Ditches and canals and rights of way therefor.**—"Whenever such public or private acequias shall necessarily run through the lands of any private individuals not benefited by said acequias the damages resulting to such private individuals, on the application of the parties interested, shall be assessed by the probate judge of the proper county in a summary manner."[1]

In case a community or people desire to construct an acequia in any part of the State, and the persons desiring to construct the same are the owners of land upon which they design constructing such acequia, no one shall be bound to pay damages for such land, as all persons interested in the construction of such acequia are to be benefited thereby.[2]

Any person owning land which may include a spring or stream of running water, or owning lands upon a river where there is not population sufficient to form a public acequia, may construct a private acequia for his own use, subject to his own regulations, provided it does not interfere with the rights of others.[3]

"The regulations of acequias, which have been worked according to the laws and customs of Sonora and the usages of the people of Arizona, shall remain as they were made and used up to this day and the provisions of this chapter shall be enforced and observed from the day of its publication."[4]

Canals and ditches must be kept in good repair by their respective owners. When any corporation, association, or individual fails to keep his works in proper repair, so that the water may be delivered to consumers, then it is lawful for such consumers who have contracted for the water to make such repairs at their own cost, which cost and charge shall be a lien on such works and may be foreclosed the same as other liens on real estate.[5]

All owners or operators of irrigating canals are required to remove from the banks of their canals all weeds growing thereon.[6]

"All owners and proprietors of arable and irrigable land bordering on or irrigable by any public acequia shall labor on such public acequia whether such owners or proprietors cultivate the land or not."[7] And, "All persons interested in a public acequia, whether

[1] Rev. Stats., 1901, Sec. 4177.

[6] Rev. Stats., 1901, Sec. 4183.

[7] Rev. Stats., 1901, Sec. 4182.

owners or lessees of land, shall labor thereon in proportion to the amount of land owned or held by them and which may be irrigated or subject to irrigation."[8]

Suitable bridges and crossings must be constructed by the owners of ditches wherever they cross public highways.[9]

By the Act approved March 17, 1903,[10] all dams, reservoirs, canals, and other works and property used for and in connection with the development, storage, and distribution of water for the purpose of generating electricity was exempted from taxation for a period of nine years from date of Act, upon the owners complying with the provisions of the Act by filing a notice of the intention to construct such plant and giving therein a full description of such plant. Work must be commenced upon such plant within six months from the date of the filing of such notice and prosecuted with due diligence to completion. A failure to comply with the provisions of the Act shall be grounds for the forfeiture of the exemption. In the construction of the works and the use of the water valid and existing rights must not be interfered with. By the Act of March 21,[11] the above exemption, under the same conditions, was extended for a period of ten years from the date of the latter Act.

By the Act of March 19, 1903,[12] all works constructed for the development, conservation, storage, and distribution of water for mining, manufacturing, and agricultural purposes were exempted from taxation.

§ 1720. **Overseers of acequias or public ditches.**—It is provided that it shall be the duty of the several justices of the peace in the State to call together in their respective precincts all the owners and proprietors of land irrigated by any public acequia, for the purpose of electing one or more overseers of said acequia for the year. The manner of conducting such election and the number of overseers shall be regulated by the justices of the peace of their respective precincts, and the only persons entitled to vote at such

8 Rev. Stats., 1901, Sec. 4184.
9 Rev. Stats., 1901, Secs. 4205-4208.
10 Laws, 1903, p. 39.
11 Laws, 1907, p. 170.
12 Laws, 1903, p. 136.

elections are the owners and proprietors of land irrigated by the acequia.

It is the duty of the overseers to superintend the opening and repairs of the acequias; to apportion the number of laborers to be furnished by the owners of the lands; to regulate them according to the quantity of land to be irrigated by each one from the acequia; to distribute and apportion the water, and in making such apportionment he shall take into consideration the nature of the seed sown or planted; and to conduct and carry on such distribution with justice and impartiality. During the years of scarcity of water, owners of fields shall have preference of the water for irrigation according to the dates of their respective occupation of the land, either by themselves or their grantors. Then follow provisions that it shall be the duty of the owners of lands to furnish laborers as required by the overseer; for the removal and punishment of the overseer in case of wilfully neglecting or refusing to fulfill the duties of his office, or for malfeasance in office. Fines are prescribed for the refusal of land owners to furnish the number of laborers required; for the interference with the acequia or works without the consent of the overseer, all of which fines and forfeiture shall be for the benefit of the public acequia.[1]

The overseer may be removed from office upon a second conviction for the failure to perform his duty, and a new overseer elected.[2]

§ 1721. **Corporations and companies.**—Corporations and companies may be organized for the purpose of appropriating water either for their own use or for the sale or rental of the water to others. Railroad companies are given power to appropriate water and to acquire rights of way for their own use.[1]

"All corporations, associations, or individuals, owning, managing, or controlling any canals, irrigating ditches, flumes, pipe lines, or other means for conveying water from any public stream in this Territory, on or to the lands of occupants, for the purpose of selling, hiring, or letting the same to such occupants for pay or hire, shall not sell, hire, or let, or contract to sell, hire, or let, more water than

1 Rev. Stats., 1901, Secs. 4187-4195. See Dyke v. Caldwell, 2 Ariz. 394, 18 Pac. Rep. 276; Clifford v. Laurrien, 2 Ariz. 202, 11 Pac. Rep. 397.

2 Rev. Stats., 1901, Secs. 4193, 4194.

1 Rev. Stats., 1901, Secs. 859-861.

the said canals, ditches, flumes, or pipe lines may be estimated to carry at any one time, whether such contract be made for measured time or acreage quantity." [2]

There rests upon such a corporation, so long as it uses its franchise, a duty to render the public at a reasonable rate the services in furnishing the water for which it was created.[3]

Article XV of the new State constitution [4] provides for the creation of a Corporation Commission with power to fix just and reasonable rates and charges for the furnishing of water for irrigation and other purposes.

§ 1722. **Criminal statutes.**—It is made a misdemeanor to steal water,[1] so, also, for any person during the season when there is a scarcity of water for irrigation to waste water.[2] So, also, for any person to unlawfully use the water from any acequia or irrigating canal without the proper gates required by law, or for any person to unlawfully construct or maintain any dam, or in any way impede the free passage of the water in any irrigating canal or acequia.[3] So, also, the failure to construct the proper bridges, or to permit water to flow from irrigating canals over the highways.[4]

All by-paths or foot paths across any cultivated fields are prohibited, under penalty of a fine not to exceed $10, for the benefit of the public acequia, to be assessed in a summary manner by the justice of the peace of the precinct, "and if the person so offending shall not have the wherewith to pay the fine, he shall be adjudged and sentenced to work ten days on the public acequia." [5] It is also made a misdemeanor for the failure to remove weeds from the banks of canals.[6] So, also, for the failure of the overseer of a ditch or acequia to perform his duties.[7] So, also, the failure of land owners to furnish laborers at the request of the overseer, and the unlawful obstruction of acequias.[8]

7 Rev. Stats., 1901, Sec. 4193.

8 Rev. Stats., 1901, Secs. 4195, 4196.

All fines and forfeitures, recovered for the use and benefit of any public acequia, shall be applied by the overseers in improving and repairing the same.[9]

§ 1723. **Riparian rights in Arizona.**—The doctrine of riparian rights as recognized by the common law is entirely abolished by statute and Court decision. It is provided: "The common law doctrine of riparian water rights shall not be of any force or effect in this Territory."[1] It is held that the arid condition of the country and the necessities of the people require the change to the Arid Region Doctrine of appropriation.[2]

**§ 1724. Particular features of the State.**—The State of California is traversed by the Sierra Nevada Mountains and the Coast Range, both of which, in a general way, are parallel to the Pacific Coast. The greater part of the agricultural land of the State lies in the great central valley, between these ranges, and in the portion of the State south of the Kern River, sometimes called the Tehachapi, Mountains. In most of the sections of the State there is usually sufficient rainfall for the maturing of some crops, although there are some sections where no crops can be grown without irrigation. The normal annual precipitation ranges from about two inches in the Imperial Valley, in the southeastern part of the State, to above sixty inches along the coast in the western part. The rivers are small, except the Colorado, which separates Arizona from California in the southeast portion of the State. The State, with its varied topography, soil, and climate, offers an interesting field for the study of irrigation, which we will discuss in the following section.[1]

**§ 1725. Irrigation in the State.**—With the exception of the extreme northwestern portion, irrigation is practiced to some extent throughout the entire State of California; but the larger part of the

[1] See, also, for additional data, California Hydrography, by Joseph B. Lippincott, Water-Supply and Irrigation Paper No. 1, U. S. Geological Survey, Washington, 1903; Storage Reservoirs on Stony Creek, California, by Bert Cole, Water-Supply and Irrigation Paper No. 86, U. S. Geological Survey, Washington, 1903; Surface Water Supply of California, 1906, by W. B. Clapp, District Hydrographer, Water-Supply and Irrigation Paper No. 213, U. S. Geological Survey, Washington, 1903; Surface Water Supply of the United States, 1909, Part XI, California, prepared under the direction of M. O. Leighton by W. B. Clapp and F. F. Henshaw, Water-Supply Paper No. 271, U. S. Geological Survey, Washington, 1911; Water Resources of Antelope Valley, California, by Harry R. Johnson, Water-Supply Paper No. 278, U. S. Geological Survey, Washington, 1911.

irrigated land lies in the south portion of the great central valley, between the two ranges of mountains and in the south part of the state.

No other State of the Union produces such a variety of crops, and in no other State has agricultural land reached the selling price of the semi-tropical fruit orchards of Southern California. Except in a few localities, there is not in California the absolute necessity for irrigation that exists in most of the other Western States. On nearly all of the lands that are irrigated some crops will grow without the artificial application of water. The most valuable crops, however, usually require irrigation, and with it the yield of all crops is greatly increased. In years of drought an irrigation system is an insurance against crop failure.

Reports upon the conditions of that State show that California is utilizing practically all of her water resources and employing all the methods peculiar to other localities. Irrigators are using surface waters from the streams, drainage water, sewage water, water from catchment basins, and other subterranean sources, water from artesian wells, from tunnels run into mountain sides, and water impounded in reservoirs, filled by large or small drainage areas. The present California idea is that water is gold, and that it is hunted for and appropriated with as much ardor as the precious metal itself was in the earlier history of the State.

Up to a few years ago California was ahead of any other State of the Union in the development of her water supply and number, size, and boldness of design of her irrigation works, but within recent years some of the other States are forging ahead. For example, as reported by the census of 1910, Colorado in 1909 had something like 30,000 acres more under irrigation than did California. The State of Idaho has some of the largest projects in the country, especially those operating under the Carey Act. But the State of California has made great advancement in this part of her development, and has reduced to an exact science the amount of water that can be applied to a tract of land at certain intervals with the best results, both in quantity and quality of crops, and thus is rapidly doing away with the wasteful methods of the past. This advancement was rendered possible in that State by the existing extremes—the economic uses of water rendered necessary by scanty supply, and the dense population in some localities.

It is safe to say that California owes the larger portion of its prominence, which it occupies today, to the result of irrigation. The localities where irrigation has been practiced the longest and most extensively have gained the widest reputation outside of the State. Almost every step taken in advance in California's prosperity since the first great rush for gold has been anticipated by new and more extensive irrigation development. It is no exaggeration to say that were it not for irrigation the fame of California would be confined to the products of her mines, and she would not have more than half her present population. Without irrigation the major portion of the State, which is today thickly populated and in the highest degree productive, would still be in its original barren condition.[1]

As reported by the census of 1910, the total number of farms irrigated in California in 1909 was 39,352, as against 25,675 in 1899, an increase of 13,677, or 53.3 per cent, during the decade. The total area irrigated in 1909 was 2,664,104 acres, as against 1,446,114 acres in 1899, an increase of 1,217,990 acres, or 84.2 per cent. The

total acreage which all enterprises were capable of irrigating in 1909 was 3,619,378 acres. The area included in projects completed or under construction in 1910 was 5,490,360 acres.

Of the area irrigated in 1909, according to the report, only 400 acres were irrigated under the United States Reclamation projects, and no area under the Carey Act. Irrigation districts, co-operative enterprises, and individual partnership enterprises, which together supplied about 72 per cent of the acreage irrigated in 1909, are all controlled by the water users. Commercial enterprises or corporations organized for profit, the only other class in the State that irrigated any extensive area in 1909, supplied 28 per cent of the total irrigated area.

**§ 1726. Criticism of the California laws.**—In the present chapter we have endeavored to set forth an abstract of the statutory laws of the State of California upon the subjects of waters and water rights and the construction of those laws by the courts. The task has been an arduous one for the reasons explained herein; and perhaps it may be deemed by some that more space has been devoted to the chapter than there should have been. But these laws have been abstracted down to the smallest possible space and still give an intelligent statement of what they contain.

Upon the subject of the appropriation of water, the old California code adopted in 1872 is still in force with some slight amendments.[1] This code simply embodies in statutory language those rules and regulations adopted by the early California miners for the government of water rights within their respective mining districts and afterward recognized by Congress as the Arid Region doctrine of appropriation, and which rules and regulations the courts, long prior to their enactment into statutory law, had upheld as a matter more largely based upon necessity than upon law.[2] But this code, according to the best accepted authorities, based upon actual experience in other States, is antiquated and out of date, and not the best law for governing the appropriation and distribution of waters, especially in thickly settled communities. It is as antiquated and out of date as is the measurement of water by the miner's inch, for

1 See Secs. 1410-1422, Civil Code; 2 Kerr's Cyc. Codes, pp. 1137-1164.

2 For the history of the Arid Region Doctrine of appropriation, see Chap. 32, Secs. 595-626.

which the California code still provides, as compared to the more modern measurement by the cubic foot per second of time or the acre-foot. For many years this simple code existed in California without change, and the right to the use of water was based upon its actual application to some beneficial or useful purpose. Then came the decision in the case of Lux v. Haggin,[3] in 1886, which fixed upon the State the common law doctrine of riparian rights, without use, in addition to the doctrine already adopted of prior appropriation. These two rules of law are as opposite in principle as it is possible to find two rules—the one that in order to acquire a right to the use of water it must be actually diverted from the natural stream and applied to some beneficial use or purpose, and the other that the water must be permitted to flow by the lands of the riparian owners as it was wont to flow by Nature. As stated by a California Federal Judge for the Circuit Court of Appeals in an Alaska case, "The common law doctrine of riparian rights being wholly inconsistent with and antagonistic to that of appropriation, it necessarily follows that when the Federal and State Governments assented to, recognized, and confirmed, with respect to the waters upon the public lands, the doctrine of appropriation, they in effect declared that that of riparian rights did not apply."[4] But in California this rule has not been followed, as the courts have attempted to maintain both systems. The result is that from the date of the decision in the Lux v. Haggin case to the present there has been an "irrepressible conflict" in the State in attempting to reconcile these contrary doctrines and enable both to exist side by side. And upon this question alone millions of dollars have been expended in litigation, and still the question is as unsettled as it was when the conflict first began. It never will be settled until there is some effective statutory law enacted to dispose of all claims to water by riparian owners, except that quantity which is actually applied by them to some beneficial use or purpose. They have such a statute in Oregon, and it could be adopted in California.[5]

If the signs of the times indicate anything, which is not always

the case in California, the State is on the eve of a complete change in its system of laws upon the subjects of water and water rights. Already there has been adopted a statute, similar statutes to which are always made the fundamental declaration of the constitutions or statutes of the other States adopting the laws of State control or of State administrative laws,[6] that: "All the water or the use of water within the State of California is the property of the people of the State of California."[7] Again, in the Water Power Act of 1911,[8] with the exception of the question of the determination of existing rights, there were conferred upon the board of control, for the purposes of that Act only, almost the exact powers and duties which are conferred upon the Wyoming Board of Control for all purposes.[9] Furthermore, there have been several attempts at recent sessions of the California legislature to adopt a statute similar in many respects to that of Wyoming. But these bills failed simply from lack of votes. It remains to be seen what the Conservation Commission created at the last session of the legislature, under the powers and duties conferred upon it, will do in this respect.[10]

There is one subject as to the California statutory laws which should be severely criticised, and that is the habit of the legislature when it enacts a law upon a certain phase of a subject to retain all previous laws upon the same subject. There are many examples of this, but one will suffice. There are two existing statutory laws relative to the powers and duties of the county supervisors to fix water rates for the furnishing of water outside of cities and towns. There is the Act of 1880[11] and the Act of 1885.[12] This habit

leads to confusion, endless search upon the part of the court and bar to determine just what the law is, and, where the phrasing is somewhat different, it requires, at times, several constructions by the Supreme Court.

During recent sessions of the legislature a number of boards and commissions have been created. Our criticism upon this subject is that there are now too many boards which simply act in an advisory capacity and not enough active boards with authority. Take, for example, the "advisory board" and the "consulting board" to the department of engineering.[13] Again, the only powers conferred upon the conservation commission by the Act of 1911 [14] are to investigate certain subjects and to make a report thereon.

California led the Western States in its irrigation district law. The law commonly designated as the Wright Act has been at least followed by every State and Territory adopting such a law, and in a number of the States it has been literally copied. California was also the battlefield upon the question of the constitutionality of that law.[15] Many of the States withheld the enactment of such a law until this question was settled, then, by adopting the California statute, they also adopted the decisions holding that the law was constitutional. But in recent years California seems to have gone district mad. Besides the irrigation district law, there are general statutes providing for the organization, control, and operation of municipal water districts of two classes,[16] reclamation districts,[17] levee districts,[18] protection districts,[19] overflow districts,[20] and storm water districts.[21] Besides these, there are a number of special Acts, scattered throughout the various codes, which authorize the organization and operation of particular districts for different purposes, and especially as relating to drainage. About the only law that the State of California really lacks in the way of district law, relating to waters, is one upon the subject of the control and regulation of rain water before it hits the earth, and we have no doubt but that such a law will be enacted, upon our suggestion, at the next

session of the legislature. It has evidently been overlooked. The Acts mentioned above are all long and encumber many pages of the statutes; and those Acts relating to the subject of drainage and the protection of lands from overflow and storm waters treat kindred subjects and are largely similar in terms. Surely it would not require a man with the brain of a David Dudley Field to codify at least these latter laws into one.

There is another serious criticism of the California statutes upon the subject of waters and water rights that goes not so much to the substance of the laws themselves as to where to find the laws. And from a careful examination of the statutes this applies to all the statutory laws of the State. The system of codes is in itself confusing, even if the codes were consistent, which they are not. According to the latest and best compilation of the California codes [22] there are the following codes, which, with their construction by the courts, cover the pages, as follows: Volume 1, Political Code, 1234 pages; Volume 2, Civil Code, 2318 pages; Volume 3, Code of Civil Procedure, 2609 pages; Volume 4, Penal Code, 1494 pages; Volume 5, General Laws, Henning, 1564 pages; Volume 6, Supplement 1906-1909, 2157 pages. Besides this there are the statutes and amendments of 1911, bringing the laws down to date, containing 2186 pages. This makes 13,564 pages one must search through in order to find the statutory laws of California upon the subject of waters or upon any other subject. Then, again, the code divisions are not consistent. For example, the irrigation district law is found in the General Laws, the reclamation district law in the Political Code, the levee district law again in the General Laws. It is the same relative to many subjects.

In concluding this section we will add that the statutory laws of California are swollen beyond all reasonable proportions. It seems to be the intent of the California legislators to cover all phases of human action by statutory rule. The legislature of 1911 enacted 2186 pages of matter, which include a great number of constitutional amendments. And upon the subject of the constitution of California we find it to be a rapidly growing document. With the amendments submitted by the last legislature and adopted by a vote of the people on October 10, 1911, it will probably cover 150 pages. It should be remembered that the Commonwealth of Massachusetts

22 Kerr's Cyc. Codes.

has struggled along in her feeble way for over one hundred years with a constitution covering less than thirty pages. The statutory laws of California should be codified, not compiled, there are compilations enough, but codified in the full sense of the term.

§ 1727. **State constitutional provisions.**—The provisions of the State constitution of California of 1879, upon the subject of waters, were adopted long before the law of State control or State administrative law was fully evolved, and also before it was fully settled as to just what authority a State had over the waters flowing within its boundaries. Therefore, these provisions have more to do with the exercise of the right of eminent domain and the fixing of the water rates which might be charged for the use of water in the State.

Article I, Section 13 of the State constitution provides:

"No person shall be . . . deprived of life, liberty, or property without due process of law."

Article I, Section 14, provides:

"Private property shall not be taken or damaged for public use without just compensation having first been made to, or paid into court, for the owner, and no right of way shall be appropriated to the use of any corporation other than municipal until full compensation therefor be first made in money or ascertained and paid into court for the owner, irrespective of any benefit from any improvement proposed by such corporation, which compensation shall be ascertained by a jury, unless a jury be waived, as in other civil cases in a court of record, as shall be prescribed by law. The taking of private property for a railroad run by steam or electric power for logging or lumbering purposes shall be deemed a taking for a public use, and any person, firm, company, or corporation taking private property under the law of eminent domain for such purposes shall thereupon and thereby become a common carrier." [1]

[1] The last sentence was added by Senate Constitutional Amendment No. 17, Stats. and Amdts., 1911, Chap. 9, p. 1488, and for the purpose of making effective Subd. 11 of Sec. 1238 of the Code of Civil Procedure, which says that eminent domain may be exercised in behalf of "roads and flumes for logging or lumbering purposes," but which provision of the Code was held not valid under the existing constitution. The above amendment was adopted by a vote of the people on the 10th day of October, 1911.

Rudel v. Los Angeles Co., 118 Cal. 281, 50 Pac. Rep. 400.

Upon the subject of the fixing of water rates and charges, Article XIV, Section 1 of the constitution provides:

"The use of water now appropriated or that may hereafter be appropriated, for sale, rental, or distribution, is hereby declared to be a public use, and subject to the regulation and control of the State, in the manner to be prescribed by law;[2] provided, that the rates or compensation to be collected by any person, company, or corporation in this State for the use of water supplied to any city and county, or city or town, or the inhabitants thereof, shall be fixed annually by the board of supervisors, or city and county, or city or town council, or other governing body of such city and county, or city or town, by ordinance or otherwise, in the manner that other ordinances or legislative Acts or resolutions are passed by such body, and shall continue in force for one year, and no longer.[3] Such ordinances or resolutions shall be passed in the month of February of each year, and take effect on the first day of July thereafter. Any board or body failing to pass the necessary ordinances or resolutions fixing water rates, where necessary, within such time, shall be subject to peremptory process to compel action at the suit of any party interested, and shall be liable to further processes and penalties as the legislature may prescribe. Any person, company, or corporation collecting water rates in any city and county, or city or town in this State, otherwise than so established, shall forfeit the franchises and water works of such person, company, or corporation to the city and county or city or town where the same are collected for the public use."[4]

2 See Merrill v. Southside Irr. Co., 112 Cal. 433, 44 Pac. Rep. 720; Mahoney v. American etc. Co., 2 Cal. App. 186, 83 Pac. Rep. 267; Hildreth v. Montecito etc. Co., 139 Cal. 22, 72 Pac. Rep. 395; People *ex rel.* Ricks W. Co. v. Elk River etc. Co., 107 Cal. 221, 40 Pac. Rep. 531, 48 Am. St. Rep. 125; Crow v. San Joaquin etc. Co., 130 Cal. 309, 62 Pac. Rep. 562, 1058; People v. [5] Stats. and Amdts., 1911, Chap. 60, p. 2164.

conferred by the legislature, and the right of the legislature to confer powers upon the Railroad Commission respecting public utilities is hereby declared to be plenary and to be unlimited by any provision of this constitution.

"From and after the passage of the legislature of laws conferring powers upon the railroad commission respecting public utilities, all powers respecting such public utilities vested in boards of supervisors, or municipal councils or other governing bodies of the several counties, cities and counties, cities and towns, in this State, or in any commission created by law and existing at the time of the passage of such laws, shall cease so far as such powers shall conflict with the powers so conferred upon the railroad commission"; provided, however, that this section shall not affect such powers of control over any public utility vested in any municipality as, at an election to be held pursuant to laws to be passed hereafter, a majority of the qualified electors of such municipality shall vote to retain, but if the vote so taken shall not favor the continuation of such powers, they shall thereafter vest in the Railroad Commission; and, provided further, that such municipality may, by vote, surrender such powers to the Railroad Commission; or if such municipality shall have surrendered any powers to the Railroad Commission it may, by like vote, thereafter reinvest itself with such power.

"Nothing in this section shall be construed as a limitation upon any power conferred upon the Railroad Commission by any provision of this constitution now existing or adopted concurrently herewith."

By Senate Constitutional Amendment No. 49,[6] and adopted by the voters of the State on October 10, 1911, Article XI, Section 19, of the State constitution, was amended to read as follows:

"Section 19. Any municipal corporation may establish and operate public works for supplying its inhabitants with light, water, power, heat, transportation, telephone service or other means of communication. Such works may be acquired by original construction or by the purchase of existing works, including their franchises, or both. Persons or corporations may establish and operate works for supplying the inhabitants with such services upon such conditions and under such regulations as the municipality may prescribe under its organic law, on condition that the municipal gov-

[6] Stats. and Amdts., 1911, Chap. 67, p. 2180.

ernment shall have the right to regulate the charges thereof. A municipal corporation may furnish such services to inhabitants outside its boundaries; provided, that it shall not furnish any service to the inhabitants of any other municipality owning or operating works supplying the same service to such inhabitants, without the consent of such other municipality, expressed by ordinance."

§ 1728. **Administrative officers.**—The State of California never having adopted the law of State control or State administration of the waters within its jurisdiction, has, therefore, no administrative officers, as have many other States of the West, whose duties are to regulate and control the appropriation, distribution, and use of the waters of the State.[1] It is true that by the Act of April 8, 1911,[2] the office of State engineer was created, but the powers and duties of such engineer are limited, and, as prescribed by the Act, in no way relate to the appropriation or the distribution of the waters within the State, which powers and duties, among other things, are conferred by the statutes of many of the other Western States upon their State engineers.[3] However, the tendency seems to be in the direction of a system of State control in California, and in recent sessions of the legislature bills have been introduced, based largely upon the Wyoming and Colorado systems. These bills, however, failed to pass.[4] Therefore, at the present writing the State officials having duties concerning waters are more in the nature of advisory or investigating commissions or boards, with the single exception of the board of control, as created and provided for by the Water Power Act of 1911,[5] as discussed in another section of this chapter.[6]

*Board of Control Under Water Power Act.*—This board, relative to the appropriation and use of water for power purposes, has conferred upon it, for the purposes of the Act only, almost the exact

6 See Sec. 1732.

powers conferred upon other boards in other States relative to the appropriation and use of waters for all beneficial uses and purposes.

*The Conservation Commission.*—By the Act of April 8, 1911,[7] there was created a Conservation Commission, for the purpose of investigating, among other things, the subjects of water, the use of water and water power, and of recommending legislation thereon.[8]

*The Department of Engineering and the State Engineer.*—Among the State civil executive officers there is provided for "a surveyor-general, who shall be *ex officio* register of the State land office."[9] The duties imposed upon him, among other things, are to make an estimate of the aggregate quantity of land belonging to the State and what information he may be able to obtain as to the characteristics of the same; to make an estimate of the various crops produced, and all facts which, in his opinion, are calculated to promote the development of the resources of the State.[10]

By the Act of March 11, 1907,[11] afterward amended by the Act of March 20, 1909,[12] a "Department of Engineering" of the State of California was thereby created. This Act was again amended to a large extent by the Act of April 8, 1911,[13] and, as amended, provides that "a Department of Engineering" was created to consist of an "advisory board," comprised of the Governor, as *ex officio* member and chairman of said board, and a State Engineer, who shall be the chief executive officer of the department; the general superintendent of State hospitals, the chairman of the State board of harbor commissioners of San Francisco, and three other members to be appointed by the Governor. The Governor shall also appoint five persons, who shall be known as a "consulting board" to the department of State engineering, upon all matters that affect irrigation, drainage, and river improvement. Such con-

sulting board to report to the advisory board on all matters relating to such subjects mentioned, together with their conclusions thereon. The State engineer shall be at the head of the Department of Engineering, and shall have charge of all engineering and structural work of the department.

By the Act of April 22, 1909,[14] the department of engineering as above created was empowered to make topographical surveys and investigations of the water resources of the State, and the use and distribution of water for agricultural purposes, and for this purpose to co-operate with the different departments of the Federal Government.

Water commissioners were provided for in early California Acts.[15] These Acts have been practically superseded by subsequent laws, but they have never been repealed, and are preserved in the codes in the following language:

"Section 6. All Acts creating or regulating boards of water commissioners and overseers in the several townships or counties of the State."[16]

**§ 1729. Title to and the right to appropriate water.**—The State of California never adopted the law of State control or the law of State administration of the appropriation, use, and distribution of the waters flowing within its boundaries, as is the case of many of the States of the West; and it was not until the Act approved April 8, 1911, that there was any declaration in its constitution or codes relative to the title to the waters being in the State or public. By that Act the old Section 1410 of the Civil Code [1] was amended to read as follows:

[14] Stats. and Amdts., 1909, Chap. 704, p. 1079; Supp. Kerr's Codes, 1906-1909, p. 2106.

[15] Stats. and Amdts., 1854, p. 76; 1862, p. 234.

[16] Pol. Code, Sec. 19, Subd. 6; 1 Kerr's Cyc. Codes, p. 18.

See Lux v. Haggin, 69 Cal. 255, 4 Pac. Rep. 919, 10 Pac. Rep. 674; Daley v. Cox, 48 Cal. 127.

[1] This section formerly read as follows: "The right to the use of running waters flowing in a river or down a canyon or ravine may be acquired by appropriation." Civil Code, Sec. 1410, 2 Kerr's Codes, p. 1137.

For the construction of the above provision, see Watterson v. Saldunbehere, 101 Cal. 107, 35 Pac. Rep. 432, holding that the right may be acquired without compliance with the code; Wood v. Etiwanda W. Co., 122 Cal. 152, 54 Pac. Rep. 726; Lux v. Haggin, 69 Cal. 255, 10 Pac. Rep. 674; *Id.*, 4 Pac. Rep. 919; Ely v. Ferguson, 91 Cal. 187, 27 Pac. Rep. 537; South-

"All water or the use of water within the State of California is the property of the people of the State of California, but the right to the use of running water flowing in a river or stream or down a canyon or ravine may be acquired by appropriation in the manner provided by law; provided, that no water for the generation of electricity or electrical or other power may be appropriated for a longer period than twenty-five years, except by a municipal corporation, other than an irrigation district or lighting district or by an irrigation district when such electricity, electrical or other power is for use and distribution only within its own limits, and as subsidiary to and mainly for the purpose of serving and carrying out irrigation, or by a lighting district when such electricity, electrical or other power is for use and distribution only within its own limits."[2] Whether this amendment is the foundation of a complete system of State control in the State of California remains to be seen.

The old section as it formerly stood contained a mere statutory declaration of the rule of law, in accordance with the Arid Region Doctrine of appropriation, which had been previously settled by the courts concerning the appropriation of water from the streams of the State. In the early days of the State, in the absence of legislation upon the subject, it became necessary for those claiming rights by virtue of an appropriation to depend wholly upon the courts to uphold their claims, in case of any controversy arising

For the appropriation and ownership of waters by municipalities, see Sec. 756.

2 Civil Code, Sec. 1410; 2 Kerr's Cyc. Codes, p. 1137; as amended, Stats. and Amdts., 1911, Chap. 407, p. 821; Kerr's Bien. Supp., 1911, p. 584.

See, also, for Act of 1911, prohibiting the taking of waters from the State, Sec. 1750.

"The mouth of a creek, river, or slough which empties into another creek, river, or slough, is the point where the middle of the channel intersects." Pol. Code, Sec. 3908; 1 Kerr's Cyc. Codes, p. 1041.

regarding them. And, fortunately for those claiming such rights, the courts, by a long line of decisions, and before any direct statutory enactments either by Congress or by the State, under the peculiar arid condition of the country and the needs and necessities of the people, held that exclusive rights to the use of water might be acquired by prior appropriation.[3] This subject has been fully discussed in a previous portion of this work.[4]

By the Act of April 8, 1911,[5] it is further declared that: "All water or the use of water which has been heretofore appropriated and which has not been put, or which has ceased to be put to some useful or beneficial purpose, or which is not now in the process of being put to some useful or beneficial purpose with due diligence in proportion to the magnitude of the work necessary properly to utilize for the purpose of such appropriation such water, or use of water, is hereby declared to be unappropriated."

Upon the subject of the ownership of the soil under waters it is declared:

"The State is the owner of all land below tidewater, and below the ordinary tidewater mark, bordering upon tidewaters within the State; of all land below the water of a navigable lake or stream"; etc.[6]

The purpose for which an appropriation may be made is defined:

"The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such a purpose, the right ceases."[7]

The doctrine set forth in this section was also established by the early decisions to mean that the beneficial purpose may be agricultural, mining, milling, manufacturing, domestic, municipal, or any other useful or beneficial purpose to which water may be applied; but must be some actual positive beneficial purpose existing at the time or contemplated in the future as the object for which the water is to be utilized; otherwise no prior and exclusive right to water can be acquired, no matter how elaborate and complete may be the physical structures by which the appropriation is proposed to be effected.[8] "As between appropriators, the one first in time is the first in right."[9]

This section of the statute embodies, as we have seen in our previous discussions upon the subject,[10] the great basis by which the rights of appropriators are determined. The waters of a stream which are not embraced in the lawful claim of the first appropriator may be appropriated by others; and as between the rights of successive appropriators on the same stream, each is in the position of a prior one as to all who follow him. This section is simply the adoption of the right of priority in statutory language as the same had been decided by a long line of decisions of the California Court.[11] And following the early decisions and statute of California, the doctrine of priority was adopted in every Western State and Territory.

**§ 1730. The appropriation of water—Notice—Construction of works.**—The State of California never adopted the elaborate code relative to the method of appropriating water, as has been done in

[10] For the doctrine of priority, see Secs. 776-786.

many of the other States, but has adhered to the simple rules of the statute as enacted in 1872, and as afterward amended.

"A person desiring to appropriate water must post a notice, in writing, in a conspicuous place at the point of intended diversion, stating therein:

"1. That he claims the water there flowing to the extent of (giving the number) inches, measured under a four-inch pressure;[1]

"2. The purpose for which he claims it, and the place of intended use;

"3. The means by which he intends to divert it, and the size of the flume, ditch, pipe, or aqueduct in which he intends to divert it."[2]

No particular form of notice is required, and all that is necessary is that it should be sufficient to put a prudent man on inquiry, and to this end its language must be liberally construed.[3]

[1] By the Act of 1901 it was provided that: "The standard miner's inch of water shall be equivalent or equal to one and one-half cubic feet of water per minute measured through any aperture or orifice." Stats. and Amdts., 1901, p. 660. See, also, Gen. Laws of Cal., Henning, 1905, p. 722.

Co., 115 Fed. Rep. 543.

See, also, for reasonable diligence, Secs. 733-741.

By the Act of 1907 it was provided further, that if it shall be necessary, by proceedings in eminent domain, to acquire water rights held by adverse riparian owners or to acquire sites for dams or power plants at the point of intended diversion or the point of intended use, as described in the notice of appropriation of said water, or if there shall be conflicting claims to the waters so appropriated, then the party so appropriating, or his assigns, shall have sixty days after the determination of legal proceedings by final judgment in which to commence to excavate or construct the works in which he intends to divert the water as provided in this section; and provided further, that if suits for such purpose are not already pending at the date of the passage of this Act, they shall be commenced within sixty days after this Act takes effect, and as to future appropriations of water, within sixty days after notice of such appropriation is posted as required by law, and such proceedings shall be prosecuted diligently to final judgment; but nothing in this Act shall be construed to revive or renew appropriations of water heretofore made which have been abandoned and lost, as against subsequent claimants who have complied with this Act. Civil Code, Sec. 1416, as amended by Stats. and Amdts., 1907, Chap. 429, p. 780, Supp. Kerr's Cyc. Codes, 1906-1909, p. 787. But the above provisions were amended out by the Act approved May 1, 1911, Chap. 730, p. 1419.

to supply such city and county, city, or town with the water required for immediate use. Any appropriation heretofore made by any such city and county, city, or town in connection with which surveys were at any time made, or an issue of bonds authorized for the construction of any portion of the works necessary for a diversion of any part of the water appropriated, is hereby confirmed to the full amount of water stated in the original notices." [8]

The undoubted effect of the above proviso will be bad, for the reason that a municipality may lay claim to all the waters of a stream at that time unappropriated, although it may not actually need the water or use it for many years to come.[9]

By the Act of March 24, 1903,[10] it was still further provided upon the subject of construction, as follows:

"If the place of intended diversion or any part of the route of intended conveyance of water so claimed, be within, and a part of any national park, forest reservation, or other public reservation, and be so shown in the notice of appropriation of said water, then the claimant shall have sixty days after the grant of authority to occupy and use such park or reservation for such intended purpose within which to commence the excavation or construction of said works, provided that within sixty days after the posting of said notice of appropriation, as provided in Section 1415 of the Civil Code, the claimant shall in good faith commence (and thereafter diligently and continuously, except when temporarily interrupted by snow or rain, prosecute to completion) such surveys and other work, as under the regulations governing such park or reservations, may be required as preliminary to, or for use with, an application for such authority; and provided, also, that the claimant shall in good faith, on completion of such survey and preliminary work, apply to the officer, board, or body having charge of such park or reservation, for such authority, and shall thereafter prosecute said application with reasonable diligence." [11]

[8] Civil Code, Sec. 1416; 2 Kerr's Cyc. Codes, p. 1160; as amended by Stats. and Amdts., 1911, Chap. 730, p. 1419; Kerr's Bien. Supp., 1911, p. 585.

[9] See, also, for appropriation and ownership by municipalities, Sec. 1731.

[10] Civil Code, Sec. 1422, Stats. and Amdts., 1903, p. 397; 2 Kerr's Cyc. Codes, p. 1164.

[11] The original Sec. 1422 of the Civil Code read as follows: "The rights of riparian proprietors are not affected by the provisions of this Act." This was repealed by the Act of 1887, Stats. and Amdts., 1887, p.

The completion of an appropriation is defined as follows:

"By 'completion' is meant the conducting of the waters to the place of intended use." [12]

The doctrine of relation is stated as follows:

"By compliance with the above rules the claimant's right to the use of the water relates back to the time the notice was posted." [13]

A forfeiture for non-compliance is provided:

"A failure to comply with such rules deprives the claimants of the right to the use of the water as against a subsequent claimant who complies therewith." [14]

114, and the above provision was enacted March 24, 1903, Stats. and Amdts., 1903, p. 397, 2 Kerr's Cyc. Codes, p. 1164.

For riparian rights in California, see Sec. 1768.

See, also, Wishon v. Globe etc. Co., 158 Cal. 137, 110 Pac. Rep. 290; Inyo Consol. W. Co. v. Jess, —— Cal. ——, 119 Pac. Rep. 934.

12 Civil Code, Sec. 1417; 2 Kerr's Cyc. Codes, p. 1161.

Mitchell v. Amador etc. Co., 75 Cal. 464, 17 Pac. Rep. 246; Lower Tule etc. Co. v. Angiola W. Co., 149 Cal. 496, 86 Pac. Rep. 1081; Rincon etc. Co. v. Anaheim Union W. Co., 115 Fed. Rep. 543; Evans Ditch Co. v. Lakeside Ditch Co., 13 Cal. App. 119, 108 Pac. Rep. 1027.

It will be noticed that the above section of the statute only requires the water to be conducted to the place of intended use in order to complete the appropriation, and does not require the actual application of the water to the beneficial use or purpose, as is the case in the most of the States. For the completion of an appropriation, see Secs. 725-728.

1 Stats. & Amdts., 1907, Chap. 321, p. 597; Supp. Kerr's Cyc. Codes, 1906-1909, p. 1764.

preparation, manufacture, handling, or transporting of any materials or supplies required in the construction or completion by such city, town, or municipal corporation of any public work, improvement, or utility, and, for the purpose of constructing, equipping, using, maintaining, or operating any such works, road, railroad, tramway, power plant, telephone or telegraph line, or other necessary works or structures, such city, town, or municipal corporation is hereby authorized to lease or acquire by purchase, condemnation, or otherwise, and hold and use any land, rights of way, water, water rights, quarry, gravel bed, or other mineral deposits, or any other necessary property, within or without such city, town, or municipal corporation, or the county wherein such city, town, or municipal corporation is located."

"Nothing in this Act contained shall be construed as extending or enlarging any limitation prescribed by law or municipal charter upon taxation, expenditure of public funds, or the incurring of indebtedness by any city, town, or municipal corporation."

By the Act approved March 20, 1909,[2] there was granted to every municipal corporation of the State the right of way for the location, construction, and maintenance of water works over any public lands of the State not otherwise disposed of or in use; also the right to take from any of the lands belonging to the State adjacent to the works all material which may be necessary for the original construction of such works; and also the right to take any waters belonging to the State not otherwise disposed of, as far as may be necessary to give such municipality and its inhabitants an ample supply of water for all municipal, domestic, irrigation, and manufacturing purposes. "Whenever any municipal corporation shall desire to take any of the said waters so belonging to the State for the purposes mentioned in this Act, the legislative authority thereof shall cause a notice that said municipal corporation intends to take such waters, to be posted and recorded as in the manner provided in Section 1415 of the Civil Code of California. Said notice shall be signed in the corporate name of such municipal corporation by its mayor, or other officer authorized so to do by the legislative authority thereof. In taking any of said waters under this Act, such municipal corporation shall comply with and be subject to all the

2 Stats. & Amdts., 1909, Chap. 352, p. 581; Supp. Kerr's Cyc. Codes, 1906-1909, p. 1815.

provisions of Title VIII, Sections 1410 to 1422, inclusive, of said Civil Code"; etc.[3]

By the Act approved April 10, 1911,[4] it was provided that whenever the water supply owned by any city, incorporated town, county, or city and county, is in excess of the amount required by the inhabitants thereof, it may be declared by ordinance that such excess exists, and such excess of water may be sold outside of the limits of the corporation; but in no case shall a contract be made for a supply of any excess of water so sold for a period longer than one year; but water not required at any time may be sold from month to month during the existence of such excess, and shall be sold only at the rates fixed for consumers inside the corporate limits.

By the Act approved May 1, 1911,[5] whenever any municipality shall develop an excess of water, over and above the amount thereof which is necessary for the use of such municipality and its inhabitants, or any portion thereof as the legislative body of such municipality may determine shall be supplied therewith, then such municipality may sell, lease, or distribute such excess of water outside of the corporate limits of such municipality. No lease shall be valid for a period of more than fifteen years and all such leases shall be let to the highest bidder at public auction.[6]

**§ 1732. An Act regulating the appropriation of water for power purposes.**—By the Act approved April 8, 1911,[1] the State of California took a radical step in regulating and limiting the appropriation of water for generating electricity or other electrical power, and fixing the terms and conditions, and providing the manner and procedure upon which water for such purposes may be appropriated.

[3] For municipal water districts, see, also, Sec. 1756.

For rights of way granted municipalities over roads and streets, etc., see Act of April 10, 1911, Stats. & Amdts., 1911, Chap. 526, p. 852.

[4] Stats. & Amdts., 1911, Chap. 429, p. 854; Kerr's Bien. Supp., 1911, p. 1233.

[5] Stats. & Amdts., 1911, Chap. 715, p. 1394, Sec. 3.

[6] See, also, for municipal water districts, Sec. 1756.

[1] Stats. & Amdts., 1911, Chap. 406, p. 813; Kerr's Bien. Supp., 1911, p. 1468.

For the purposes of the Act it is provided:

"Water or the use of water for the generation of electricity, or of electrical or other power, shall not be appropriated for a longer period than 25 years."

The appropriation of water for such purposes shall be made as provided by the Act, and not otherwise. Water or the use of water appropriated for purposes other than the generation of electricity must be appropriated under a separate and distinct appropriation. All water not being used is declared to be unappropriated. The State may regulate and fix the rates for water so appropriated.

The appropriation must be made by an application for a permit for the same to the board of control provided for in the Act itself. All the facts necessary must be stated in the application, which must be accompanied by such maps and drawings; and a copy of the application must be recorded by the applicant in the office of the county recorder of the county, in which the proposed works are to be erected. The board of control must examine the application, and, if defective, it may be returned for amendment, without losing its priority. The application may be approved by the board for a less amount of water than is applied for. The approval or rejection of the application shall be endorsed thereon, and one copy returned to the applicant. If the application be approved the applicant shall immediately record such approval, and proceed with the construction of the necessary works, and take all steps required to complete the appropriation. Actual construction work must begin within six months of the date of the approval, and shall thereafter be prosecuted with reasonable diligence in proportion to the magnitude of the undertaking. Upon their completion the board must cause the same to be inspected, and a report upon their construction and condition. If the law has been fully complied with, the board shall issue a license to the applicant, allowing him to divert and use the water, for a certain period of time, but in no case for more than 25 years, which license may be renewed for a period of not more than 25 years.

The board of control may also upon application grant a license to divert and store surplus waters of any stream during floods of high water, or during those portions of the year when such water is not required, or being stored for irrigation purposes.

All appropriations of water shall be subject to the fees and charges as in the Act provided, which are as follows: Upon making the application, $10; upon receiving the license, $100; and, in addition thereto and annually thereafter, for the first 100 horsepower there shall be no charge; for all above 100 horsepower, ten cents for each horsepower.

For the purpose of carrying out the purposes of the Act, a board of control is created and established, to consist of five members, three of whom are to be appointed by the governor, and of which board the governor and the State engineer are *ex officio* members. The appointed members shall receive $10 per day for each day's service. Said board shall cease to exist if any general commission shall be created by law having the power to regulate and fix rates to be charged by public utilities, and the powers now vested in the said board shall vest in such commission.[2] In the meantime, the board of control is empowered to do and perform the acts required by the Act, and to adopt rules and regulations necessary, and to provide for public hearings upon the merits of applications. Full annual reports must be made by all taking advantage of the Act. Combinations in restraint of trade are prohibited. None of the provisions of the Act shall apply to municipal corporations, other than irrigation districts or lighting districts, but all municipal corporations desiring to appropriate water for power purposes mentioned in the Act, shall, within ten days from the time they post and record notices of appropriation for such purposes, file with the board of control a copy of such notice, giving full particulars.

Any violation of the provisions of the Act or of any order or regulation of the board is declared to be a misdemeanor and shall be punished by a fine not exceeding $5,000, or imprisonment in the county jail not exceeding one year, or by both, and the agents are declared to be equally liable with the principal.

§ 1733. **The adjudication and protection of water rights.**—The matter of the adjudication of existing water rights as between the different claimants thereto in California, has always been left to the courts, under the general equity procedure. This subject has been fully discussed in a previous chapter of this work.[1] The leg-

[2] See constitutional amendment, Sec. 1727.

[1] For adjudication of rights in equity, see Chap. 78, Secs. 1530-1566.

islature of the State of California never adopted any special code of procedure for these cases, as has been done in a number of the other States.[2]

Upon the question of injunctions and restraining orders in actions involving water rights, the Code of Civil Procedure has the following:

Section 527 of the Code of Civil Procedure, as amended by the Act of February 15, 1911, provides:

"No preliminary injunction shall be granted without notice to the opposite party, nor shall any temporary restraining order be granted without notice to the opposite party, unless it shall appear from the facts shown by affidavit or by the verified complaint that great or irreparable injury would result to the applicant before the matter can be heard.[3]

"In all actions which may be hereafter brought when an injunction or restraining order may be applied for to prevent the diversion, diminution, or increase of the flow of the water in its natural channels, to the ordinary flow of which the plaintiff claims to be entitled, the court shall first require due notice of the application to be served upon the defendant, unless it shall appear from the verified complaint or affidavits upon which the application therefor is made, that, within ten days prior to the time of such application the plaintiff has been in the peaceable possession of the flow of such water, and that, within such time, said plaintiff has been deprived of the flow thereof by the wrongful diversion of such flow by the defendant, or that the plaintiff, at the time of such application is, and for ten days prior thereto has been in possession of the flow of said water, and that the defendant threatens to divert the flow of such water, and if such notice of such application be given, and upon the hearing thereof it be made to appear to the court that the plaintiff is entitled to the injunction, but that the issuance thereof pending the litigation will entail great damage upon the defendant, and that the plaintiff will not be greatly damaged by the acts complained of pending the litigation, and can be fully compensated for such damage as he may suffer, the court may refuse the

2 For the statutory adjudication of water rights, see Chap. 78, Secs. 1567-1584.

For the determination of rights by boards, see Chap. 80, Secs. 1585-1595.

3 Code Civ. Proc., Sec. 527; 3 Kerr's Cyc. Codes, p. 837, as amended; Stats. & Amdts., 1911, Chap. 42, p. 59; Kerr's Bien. Supp., 1911, p. 701.

injunction upon the defendant giving a bond such as is provided for in Section 532; and upon the trial the same proceedings shall be had, and with the same effect as in such section provided."[4]

A following section of the Code of Civil Procedure also provides that a temporary injunction or restraining order may be vacated or modified upon motion and notice thereof. And, it is further provided that: "In all actions pending, or which may hereafter be brought, when an injunction or restraining order has been, or may be granted or applied for, to prevent the diversion pending the litigation, of water used or to be used for irrigation or domestic purposes only, if it be made to appear to the court that great damages will be suffered by the person enjoined, in case the injunction is continued, and that the person in whose behalf it is issued can be fully compensated for any damages he may suffer by reason of the continuance of the acts enjoined during the pendency of the litigation, the court in its discretion may dissolve or modify the injunction, upon the person enjoined giving a bond with sureties to be approved by the judge, and in such amounts as may be fixed by the court or judge, conditioned that such enjoined person will pay all damages which the person in whose behalf the injunction issued may suffer by reason of the continuance, during the litigation, of the acts complained of. Upon the trial the amount of such damages must be ascertained, and in case judgment is rendered for the person in whose behalf the injunction was granted, the amount fixed as such damages must be included in the judgment, together with reasonable attorney's fees. In any suit brought on the bond, the amount of damages as fixed in said judgment is conclusive on the sureties."[5]

Amador etc. Co., 66 Cal. 161, 4 Pac. Rep. 1147; Humphry v. Buena Vista W. Co., 2 Cal. App. 540, 84 Pac. Rep. 296.

Upon the subject of damages it is provided that: "Any person owning or occupying lands upon the banks of any stream where the lands lying back of such stream are lower than the banks thereof, is responsible for all damages which may be sustained by the owners or occupants of lower lands by reason of any cut or embrasure made in the bank of such stream by the owner or occupant of the bank.[6] If such cuts were made for the purpose of irrigation, and headgates and culverts have been made which competent persons consider sufficient to restrain the water, and where great diligence has been made to prevent damage, these facts may be pleaded and proved, in mitigation of damages."[7]

Relative to the proof of customs and regulations concerning mining claims, an old section adopted in the Civil Practice Act of 1851 is still maintained in the statutes of California. It reads as follows:

"In actions respecting mining claims, proof must be admitted of the customs, usages, or regulations established and in force at the bar or diggings embracing such claim, and such customs, usages, or regulations, when not in conflict with the laws of this State, must govern the decision of the action."[8]

This section has also been incorporated in the statutes of many of the Western States.

§ 1734. **Ditches and canals and rights of way therefor.**—Upon the subject of ditches and canals the California statute provides:

"The person entitled to the use may change the place of diversion, if others are not injured by such change, and may extend the ditch, flume, pipe, or aqueduct by which the diversion is made to places beyond that where the first use was made."[1]

By the Act of March 21, 1903,[2] it was also provided:

"After filing such copy for record, the place of intended diversion, or the place of intended use, or the means by which it is intended to divert the water, may be changed by the person posting said notice, or his assigns, if others are not injured by such change. This provision applies to notices already filed, as well as notices hereafter filed."[3]

The right to the use of the natural channels of streams is given:

"The water appropriated may be turned into the channel of another stream and mingled with its water, and then reclaimed; but in reclaiming it the water already appropriated by another must not be diminished."[4]

Upon the liability of joint owners in ditches, canals, or other works, it is provided that each is liable to the others for the reasonable expenses of maintaining and repairing the same, and of dis-

tributing the water. Upon the failure of any owner to pay his proportion, suit may be brought by any or all the parties who have contributed more than his or their just proportion of such expenses, and judgment may be recovered, including costs and attorney's fees.[5]

No canal, flume, or other appliance for the conducting of water must be laid, constructed, or maintained as to obstruct any public highway; all such works must be kept in repair, and bridges constructed where necessary, at the expense of the owners.[6]

§ 1735. **Servitudes upon land.**—Upon the question of servitudes upon land as far as water rights and easements are concerned, the California statutes provide:

"The following land burdens, or servitudes upon land, may be attached to other land or incidents or appurtenances thereto, and are called easements:

"9. The right of receiving water or discharging the same upon land.

"10. The right of flooding land.

"11. The right of having water flow without diminution or disturbance of any kind.[1]

1 Gen. Laws Cal., Henning, 1909, p. 604.

person, company, association, or corporation may proceed to condemn the lands and premises necessary to such right of way, under the provisions of Title 7 of Part III of the Code of Civil Procedure of this State, and the amendments made and to be made thereto, and all the provisions of said code, so far as the same can be made applicable, relating to the condemnation and taking of property for public uses, shall be applicable to the provisions of this Act."[2]

By the Act approved March 20, 1909,[3] there was granted to every municipal corporation of the State a right of way for ditches, canals, and other works, over any of the public lands not otherwise disposed of, and also the right to take material from adjacent lands for the purpose of original construction.[4]

By the Act approved April 10, 1911,[5] there was also granted to municipal corporations a right of way for water and gas pipes, mains and conduits, along or upon any road, street, alley, avenue, or highway, or across any railroad, canal, ditch, or flume.

By the Act approved May 1, 1911,[6] it was further declared that:

"Sec. 1. Irrigation in the State of California is hereby declared to be a public necessity and a public use, and the power of eminent domain may be exercised on behalf of such public use in accordance with the provisions of Title 7, Part III, of the Code of Civil Procedure of the State of California; provided, that any person, firm, or corporation exercising the power of eminent domain, and in control of water appropriated for sale, rental, or distribution, shall not, by this Act, be relieved from the duty of furnishing water to irrigate lands over which any right of way is obtained by condemnation for irrigation purposes," as required by the Act approved March 12, 1885,[7] and other Acts supplemental thereto and amendatory thereof, nor shall the same be construed to alter or change the law as to the duty of any person, firm, or corporation in charge of a public use to furnish water.

**§ 1739. Eminent domain—Public uses for which right may be exercised.**—Quite a number of the Western States have adopted the California Code of Civil Procedure, or certain portions thereof. This is true in regard to the exercise of the right of eminent domain and the condemnation proceedings therefor. We will therefore abstract the statutes upon this subject at considerable length, and under the respective sections thereof cite the cases involving water rights construing the same.

The right of eminent domain is defined as:

"Eminent domain is the right of the people or government to take private property for public use. This right may be exercised in the manner provided in this title." [1]

Upon the question of the purposes for which the right of eminent domain may be exercised, Section 1238 of the California Code of Civil Procedure was entirely re-enacted twice during the session of the legislature of 1911: First, by the Act approved March 22, 1911,[2] and second, by the Act approved April 28, 1911.[3] The later Act undoubtedly repealed and superseded the earlier Act.

This Act, as far as the subject under discussion is concerned, provides as follows:

"Subject to the provisions of this title, the right of eminent domain may be exercised in behalf of the following public uses:

"3. . . . ponds, lakes, canals, aqueducts, reservoirs, tunnels, flumes, ditches, or pipes for conducting or storing water for the use of any county, incorporated city, or city and county, village or town; . . . raising the banks of streams, removing obstructions therefrom, and widening and deepening or straightening their channels; . . . public mooring places for water craft; public parks, including parks and other places covered by water, and all other public uses for the benefit of any county, incorporated city, or city

and county, village or town, or the inhabitants thereof, which may be authorized by the legislature," etc.

"4. . . . Canals, ditches, dams, poundings, flumes, aqueducts, and pipes for irrigation, public transportation, supplying mines and farming neighborhoods with water, and draining and reclaiming lands, and for floating logs and lumber on streams not navigable.

"5. Roads, tunnels, ditches, flumes, pipes, and dumping places for working mines; also outlets, natural or otherwise, for the flow, deposit, or conduct of tailings or refuse matter from mines; also an occupancy in common by the owners or possessors of different mines of any place for the flow, deposit, or conduct of tailings or refuse matter from their several mines.

"6. By-roads leading from highways to residences, farms, mines, mills, factories and buildings for operating machinery, or necessary to reach any property used for public purposes.

"7. Telegraph and telephone lines, systems, and plants.

"8. Sewerage from any incorporated city," etc.

"11. Roads and flumes for logging or lumbering purposes.[4]

"12. Canals, reservoirs, dams, ditches, flumes, aqueducts and pipes, and outlets, natural or otherwise, for supplying, storing, and discharging water for the operation of machinery for the purpose of generating and transmitting electricity for the supply of mines, quarries, railroads, tramways, mills, and factories with electric power; and also for the applying of electricity to light or heat mines, quarries, mills, factories, incorporated cities, and counties," etc.

"13. Electric power lines, electric heat lines, electric light lines, electric light, heat, and power lines, and other works or plants for the generation, transmission, or distribution of electricity," etc.[5]

[4] See Constitutional Amendment, Art. 1, Sec. 14, Sec. 1727.

**§ 1740. Eminent domain—Classification of estates subject to be taken.**—The following is a classification of the estates and rights in lands subject to be taken for public use:

"1. A fee simple, when taken for public buildings or grounds, or for permanent buildings, for reservoirs and dams, and permanent flooding occasioned thereby, or for an outlet for a flow, or a place for the deposit of debris or tailings of a mine.

"2. An easement when taken for any other use; provided, that when the taking is by a municipal corporation, a fee simple may be taken if the legislative body of such municipal corporation shall, by resolution, determine the taking thereof to be necessary.

"3. The right of entry upon and occupation of lands, and the right to take therefrom such earth, gravel, stones, trees, and timber as may be necessary for some public use." [1]

**§ 1741. Eminent domain—Private property which may be taken.**—"The private property which may be taken under this title includes:

"1. All real property belonging to any person.

"2. Lands belonging to the State, including tide and submerged lands, not within the corporate limits of any city," etc.

"3. Lands belonging to the United States or owned or held by the United States in trust, or otherwise, for any purpose, except lands owned or held for lighthouses," and other public buildings.

"4. Property appropriated to a public use; but such property shall not be taken unless for a more necessary public use than that to which it has already been appropriated"; etc.

"5. All franchises for other more necessary public use.

"6. All rights of way for any and all purposes mentioned in Section 1238.[1]

". . . They shall also be subjected to a limited use, in common with the owner thereof, when necessary; but such uses, crossings, intersections, and connections shall be made in manner most compatible with the greatest public benefit and least private injury.

"7. All classes of private property may be taken for public use when such taking is authorized by law."[2]

It is also provided in the Irrigation District Act that:

"The use of all water required for the irrigation of the lands of any district formed under the provisions of this Act, or the Act of which this is supplementary or amendatory, and for domestic and other incidental and beneficial uses, within such district, together with the rights of way for the canals and ditches, sites for reservoirs, and all other property required in fully carrying out

v. Stimson, 91 Cal. 238, 27 Pac. Rep. 604; Northern Lt. & Pr. Co. v. Stacher, 13 Cal. App. 404, 109 Pac. Rep. 896.

the provisions of this Act is hereby declared to be a public use, subject to the regulation and control of the State, in the manner prescribed by law."[3]

**§ 1742. Eminent domain—Facts necessary to be found before property can be taken.**—"Before property can be taken it must appear:

"1. That the use to which it is to be applied is a use authorized by law;

"2. That the taking is necessary to such use;

"3. If already appropriated to some public use, that the public use to which it is to be applied is a more necessary public use"; provided that the taking by a municipal corporation for a public street shall be deemed a more necessary public use, etc.[1]

**§ 1743. Eminent domain—Procedure and jurisdiction.**—In all cases where land is required for public use, the State, or its agents, may enter the lands sought to be taken and make surveys, and such entry shall constitute no cause of action in favor of the owners, except for injuries resulting from negligence, wantonness, or malice.[1]

"All proceedings under this title must be brought in the Superior Court of the county in which the property is situated. They must be commenced by filing a complaint and issuing a summons thereon.[2]

"The complaint must contain:

"1. The name of the corporation, association, commission, or person in charge of the public use for which the property is sought, who must be styled plaintiff.

"2. The names of all owners and claimants of the property, if known, or a statement that they are unknown, who must be styled defendants.

"3. A statement of the right of the plaintiff.

"4. If a right of way be sought, the complaint must show the location, general route, and termini, and must be accompanied with a map thereof," etc.

"5. A description of each piece of land sought to be taken," etc.[3]

"The clerk of the court must issue summons, which must contain the names of the parties, and a description of the property, a statement of the public use, and a reference to the complaint for further description, and a notice to the defendants to appear and show cause why the property should not be condemned as prayed for in the complaint." In all other particulars it must be in the form of a summons in civil actions, and must be served in like manner.[4]

"All persons in occupation of, or having or claiming an interest in any of the property described in the complaint, or in the damages for the taking thereof, though not named, can appear, plead, and

Cowles, 31 Cal. 241; Cummings v. Peters, 56 Cal. 593; Tuolumne W. Pr. Co. v. Fredrick, 13 Cal. App. 498, 110 Pac. Rep. 134.

[4] Code Civ. Proc., Sec. 1245; 3 Kerr's Cyc. Codes, p. 1767.

In proceedings to condemn land belonging to the State, the summons and the copy of the complaint must be served on the governor, attorney general, and surveyor general of the State. In proceedings to condemn lands belonging to the United States, the same must be served on the United States district attorney. Amendment to Code Civ. Proc., Sec. 1240; Stats. & Amdts., 1911, Chap. 358, p. 621, Secs. 8, 9; City of Pasadena v. Stimson, 91 Cal. 238, 27 Pac. Rep. 604.

defend, each in respect to his own property or interest, or that claimed by him, in like manner as if named in the complaint.[5]

"The court shall have the power:

"1. To regulate and determine the place and manner of making connections and crossings, or of enjoying the common use mentioned in the fifth subdivision of Section 1240.[6]

"2. To hear and determine all adverse and conflicting claims to the property sought to be condemned, and to the damages therefor.

"3. To determine the respective right of the different parties seeking condemnation of the same property."[7] And, by the Act of 1911, there was added: "The court shall also have the power to regulate and determine the place and manner of removing or relocating structures or improvements, or of enjoying the common use mentioned in the fourth subdivision of Section 1240."[8]

The court, jury, or referee, must hear such legal testimony as may be offered by any of the parties to the proceedings, and thereupon must ascertain and assess the value of the property as prescribed in the statute.

"4. If the property sought to be condemned be water or the use of water, belonging to riparian owners, or appurtenant to any lands, how much the lands of the riparian owner, or the lands to which the property sought to be condemned is appurtenant, will be benefited, if at all, by a diversion of water from its natural channel, by the construction and maintenance, by the person or corporation in whose favor the right of eminent domain is exercised, of works for distribution and convenient delivery of water upon said lands; and such benefit, if any, shall be deducted from any damages awarded the owner of such property."[9] The value at date of the issuance

of the summons shall be the measure of compensation; provided, that in any case which is not tried within one year after the date of its commencement, unless the delay is caused by the defendant, the damages shall be deemed to have accrued at the date of the trial.[10]

"If the title attempted to be acquired is found to be defective from any cause, the plaintiff may again institute proceedings to acquire the same, as in this title prescribed.[11]

"The plaintiff must, within 30 days after the final judgment, pay the sum of money assessed." In case the plaintiff is the State, or a public corporation, and it appears that bonds must be issued to pay the sum assessed, then such sum may be paid at any time within six months from the date of such judgment.[12]

Payment may be made to the defendants entitled thereto, or the money may be deposited in court for the defendants. "If the money be not paid or deposited, the defendants may have execution as in civil cases; and if the money can not be made on execution, the court, upon a showing to that effect, must set aside and annul the entire proceedings, and restore possession of the property to the defendant, if possession has been taken by the plaintiff." When the payments have been made, the court must make a final order of condemnation, a copy of which must be filed with the county recorder of the proper county.[14]

The statute also provides for putting the plaintiff in possession of the property condemned, the payment to the defendant of the money paid into court, and that the acceptance of such compensation by the defendant is an abandonment of all defenses that he may have except as to greater compensation.[15]

"Costs may be allowed or not, and if allowed, may be apportioned between the parties on the same or adverse sides, in the discretion of the Court.[16]

"Plaintiff may abandon the proceedings at any time after filing the complaint and before the expiration of 30 days after final judgment, by serving on defendant and filing in court a written notice of such abandonment," etc.[17]

"Except as otherwise provided in this title, the provisions of Part II of this code are applicable to and constitute the rules of practice in the proceedings mentioned in this title."[18]

**§ 1744. The establishment of water rates for cities and towns.**—In compliance with the provisions of the constitution of California, Article XIV, Sections 1 and 2,[1] it is provided that contracts between water companies are valid and binding in law, "but do not take from the city, city and county, or town, the right to regulate rates for water," etc.[2] It is also provided that "the proper city or town authorities may prescribe proper rules relating to the delivery of water, not inconsistent with the laws of the State."[3]

In fixing rates the authorities must exercise their discretion in a reasonable and fair manner, and the rights of the public and of the company must be considered.[4]

**§ 1745. The establishment of water rates for other than for cities and towns.**—The first Act of the California legislature for the establishment of water rates furnished to other than cities and towns was approved March 26, 1880.[1] The greater portion of this

1 Stats. & Amdts., 1880, p. 16; 2 Deering's Code 271.

This Act provided as follows:

"Section 1. The boards of supervisors of the several counties of this State in which water is appropriated, furnished, and sold principally for the purpose of irrigation are hereby authorized and required to fix the maximum rates at which such water shall be furnished and sold, at a meeting to

Act was superseded by the Act approved March, 1885,[2] which was an Act entitled: "An Act to regulate and control the sale, rental, and distribution of appropriated water in this State, other than in any city, city and county, or town therein, and to secure the rights of way for the conveyance of such water to the places of use." This Act, with its amendments, provides as follows:

"Section 1. The use of all water now appropriated, or that may hereafter be appropriated, for irrigation, sale, rental, or distribution is a public use, and the right to collect rates or compensation for use of such water is a franchise, and except when so furnished to any city, city and county, or town, or the inhabitants thereof, shall be regulated and controlled in the counties of this State by the several boards of supervisors thereof, in the manner prescribed in this Act.

"Section 2. The several boards of supervisors of this State, on petition and notice as provided in Section 3 of this Act, are hereby

be held in the month of February of each year; provided, that in the year 1880 such rates shall be fixed at the first meeting after the passage of this Act. The rates so fixed and established shall be in force from and after the first day of July, after the date fixing said rates, and shall continue in force for the period of one year; provided, that nothing in this section shall apply to water furnished within the limits of any incorporated city and county, city, or town.

"Sec. 2. Any person, company, or corporation collecting rates for water furnished for irrigation in any county of this State in excess of the rates as provided in Section 1 of this Act shall forfeit for the public use the franchise and waterworks of such person, company, or corporation to the county in which such excessive rates were charged.

"Sec. 3. Upon affidavit being made by any interested party, setting forth that any such company, person, or corporation has charged rates for water in excess of the rates established by the board of supervisors, the said board of supervisors shall cause the district attorney to commence an action in the Superior Court of the county, within 30 days from the receipt by them of such affidavit, to enforce the forfeiture of the franchise and waterworks of such person, company, or corporation.

"Sec. 4. If the board of supervisors fail or neglect to fix the rates as provided in Section 1 of this Act, or if the board of supervisors fail or neglect to commence the action provided for in Section 3 of this Act, as therein provided, any interested person may commence proceedings to compel the performance of such duties.

"Sec. 5. No person, company, or corporation selling water for irrigation shall be permitted to exercise any control as to the use of the water after its delivery to the purchaser."

2 Stats. & Amdts., 1885, p. 95; Gen. Laws of Cal., Henning, 1908, p. 601; 2 Deering's Code 272.

authorized and required to fix and regulate the maximum rates at which any person, company, association, or corporation, having or to have appropriated water for sale, rental, or distribution, in each of said counties, may and shall sell, rent, or distribute the same."

Section 3 provides substantially as follows: That whenever a petition of not less than twenty-five taxpayers of any county in the State shall, in writing, petition the board of supervisors thereof to regulate and control the rates and compensation to be charged by any person or company specified in the petition the clerk of said board shall immediately publish said petition with a notice of time and place of hearing, "which shall impart notice to all persons, companies, associations, and corporations mentioned in such petition and all persons interested in the matters of such petition and notice. Such board may also cause citations to issue to any person or persons within such county to attend and give evidence at the hearing of such petition and may compel attendance by attachment."

Section 4 of said Act contains provisions for the supervisors to estimate the value of the property, and their annual reasonable expenses for repairs, management, and operating works; "and for the purpose of such ascertainment may require the attendance of such persons to give evidence and the production of papers, books, and accounts, and may compel the attendance of such persons and the production of papers, books, and accounts, by attachments, if within their respective counties."

Section 5 of the Act provides that the board of supervisors may also establish different rates and compensation for water so to be furnished for the several different uses, such as mining, irrigating, mechanical, manufacturing, and domestic, for which such water shall be supplied to the inhabitants, but such rates as to each class shall be equal and uniform. Said board of supervisors in fixing rates shall, as near as may be, so adjust them that the net annual receipts and profits thereof to the said persons, companies, associations, and corporations, so furnishing such water to such inhabitants shall be not less than six nor more than eighteen per cent upon the said value of the canals, ditches, flumes, chutes, and all other property actually used and useful to the appropriation and furnishing of such water. ". . . The said rates, when so fixed by such board, shall be binding and conclusive for not less than one year after their establishment and until established anew or

abrogated by such board of supervisors as hereinafter provided. And until such rates shall be so established or after they shall have been abrogated by such board of supervisors, as in this Act provided, the actual rates established and collected by each of the persons, companies, associations, and corporations now furnishing, or that shall hereafter furnish, appropriated waters for sale, rental, or distribution to the inhabitants of any of the counties of this State shall be deemed and accepted as the legally established rates thereof."[3]

Section 6 provides that the rates if found to be unsatisfactory may be changed by the board.

The Act also provides for a record of the rates established; that no person or company could charge rates exceeding those established and fixed by the board; and the liability of persons or companies to a recovery of the whole rate collected and actual damages where the charge was in excess of the rate fixed. And another feature of the Act was a provision that the company should be compelled to sell water upon a tender of the rates established. The text upon this subject reads as follows:

"Section 10. Every person, company, association, or corporation having in any county in the State (other than in any city, city and county, or town therein) appropriated waters for sale, rental, or distribution to the inhabitants of such county, upon demand therefor and tender in money of such established water rates, shall be obliged to sell, rent, or distribute such water to such inhabitants at the established rates regulated and fixed therefor, as in this Act provided, whether so fixed by the board of supervisors or otherwise, to the extent of the actual supply of such appropriated waters of such person, company, association, or corporation for such purposes. If any person, company, association, or corporation having water for such use shall refuse compliance with such demand, or shall neglect, for the period of five days after such demand, to comply therewith to the extent of his or its reasonable ability so to do, he or it shall be liable in damages to the extent of the actual injury sustained by the person or party making such demand and tender, to be recovered with costs."

[3] As amended by Act approved Feb. 28, 1901; Stats. & Amdts., 1901, p. 80.

Section 11 relates to the condemnation of land for rights of way, discussed in other sections.[4]

Section 11½ was added by the Act of March 2, 1897,[5] which provides as follows:

"Section 11½. Nothing in this Act shall be construed to prohibit or invalidate any contract already made, or which shall hereafter be made, by or with any of the persons, companies, associations, or corporations described in Section 2 of this Act, relating to the sale, rental, or distribution of water, or to the sale or rental of easements and servitudes of the right to the flow and use of water; nor to prohibit or interfere with the vesting of rights under any such contract."[6]

§ 1746. **Water corporations and companies—Duty to furnish water.**—Upon the subject of water and irrigation corporations and companies, it is provided:

"No corporation formed to supply any city, city and county, or town with water must do so unless previously authorized by an ordinance of the authorities thereof, or unless it is done in conformity with a contract entered into between the city, city and county, or town, and the corporation. Contracts so made are valid and binding in law, but do not take from the city, city and county, or town the right to regulate the rates for water, nor must any exclusive right be granted. No contract or grant must be made for a term exceeding fifty years.[1]

4 See Secs. 1738-1743.

Stephens, 62 Cal. 209; Spring Valley Waterworks v. Bartlett, 8 Sawy. 555, 16 Fed. Rep. 615; Jacobs v. Board Supervisors San

"All corporations formed to supply water to cities or towns must furnish pure fresh water to the inhabitants thereof, for family uses, so long as the supply permits, at reasonable rates and without distinction of persons, upon proper demand therefor; and must furnish water to the extent of their means, in case of fire or other great necessity, free of charge. The board of supervisors, or the proper city or town authorities, may prescribe proper rules relating to the delivery of water, not inconsistent with the laws of the State.[2]

"Whenever any corporation, organized under the laws of this State, furnishes water to irrigate lands which said corporation has sold, the right to the flow and use of said water shall remain a perpetual easement to the land so sold, at such rates and terms as may be established by said corporation in pursuance of law. And whenever any person who has cultivated land, on the line and within the flow of any ditch owned by such corporation, has been furnished water by it, with which to irrigate his land, such person shall be entitled to the continued use of said water, upon the same terms as those who have purchased their land from the corporation.[3]

"No person, company, or corporation selling water for irrigation

shall be permitted to exercise any control as to the use of the water after its delivery to the purchaser."[4]

§ 1747. **Water corporations and companies—Mutual corporations.**—Upon the subject of mutual irrigation companies it is further provided that, whenever the capital stock of any corporation is divided into shares, and certificates therefor are issued, such shares are personal property, and may be transferred by indorsement by the signature of the owner, and the delivery of the certificate; but such transfer is not valid, except as to the parties thereto, until the same is so entered upon the books of the corporation; provided, however, that "any corporation organized for, or engaged in the business of selling, distributing, supplying, or delivering water for irrigation purposes or for domestic use, may in its by-laws provide that water shall only be sold, distributed, supplied, or delivered to owners of its capital stock, and that such stock shall be appurtenant to certain lands when the same are described in the certificate issued therefor; and when such certificate shall be so issued, and a certified copy of such by-laws recorded in the office of the county recorder in the county where such lands are situated, the shares of stock so located on any land shall only be transferred with said lands, and shall pass as an appurtenance thereto."[1]

The Civil Code also provides for the distribution of surplus stock among the shareholders in companies, by way of a stock dividend, in terms as follows:

"Where a corporation has been heretofore or may hereafter be formed for the purpose, among other things, of acquiring, holding, and selling real estate, water and water rights, the directors of such corporation may, with the consent of the stockholders representing two-thirds of the capital stock thereof, given at a meeting called for that purpose, divide among the stockholders the land, water, or

water rights so by such corporation held, in the proportions to which their holdings of such stock at the time of such division entitle them. . . . Nothing herein prohibits a division and distribution of the capital stock of any corporation which remains after the payment of all its debts, upon its dissolution, or the expiration of its term of existence."[2]

**§ 1748. Water corporations and companies—Power to contract for services.**—By the Act approved March 16, 1901,[1] regulating the power of water corporations and companies to make contracts for the sale and distribution of water, it was provided:

"Section 1. It is and shall be lawful for any person, company, association, or corporation, furnishing for sale, rental, or distribution any appropriated waters for purposes of irrigation, to enter into contracts with individual consumers of such water or with bodies of such consumers, relating to the sale, rental, or distribution of such water, or any thereof, which contracts, subject to the restrictions hereinafter declared, shall be valid to all intents and purposes, any law or rule to the contrary notwithstanding.

"Section 2. No such contract shall provide for the sale, rental, or distribution of any such water at any rate exceeding the established rates fixed and regulated therefor by the board of supervisors of the proper counties, or fixed and established by such person, company, association, or corporation, as provided by law.

"Section 3. Nothing in this Act contained shall be construed to authorize or make valid any contract not made for a valuable consideration; but an agreement on the part of such person, company, association, or corporation to sell, rent, or distribute any water to a consumer, without payment in advance therefor, or upon any other terms to which such consumer is not otherwise lawfully en-

titled, shall be deemed and taken to be a valuable and sufficient consideration for such contract.

"Section 4. Nothing in this Act contained shall affect any contract made prior to the time that the board of supervisors fix and establish the rates and regulations for and under which water shall be sold and supplied." [2]

**§ 1749. Artesian wells and subterranean waters.**—In 1877 there was passed an Act to regulate the use of artesian wells, and to prevent the waste of subterranean waters in the State. A new Act was afterward passed in 1901,[1] and still another Act in 1907,[2] entitled: "An Act to prevent the waste and flow of water from artesian wells, and prescribing penalties therefor, and defining waste and artesian wells." [3] This later Act takes the place of the earlier Acts, the same being repealed thereby. So the statute as it now stands, is as follows:

"Section 1. Any artesian well which is not capped, equipped, or furnished with such mechanical appliance as will readily and effectively arrest and prevent the flow of any water from such well, is hereby declared to be a public nuisance. The owner, tenant, or occupant of the land upon which such well is situated, who causes, permits, or suffers such public nuisance, or suffers or permits it to

remain, or continue, is guilty of a misdemeanor; and any person owning, possessing, or occupying any land upon which is situated an artesian well, who causes, suffers, or permits the water to unnecessarily flow from such well, or to go to waste, is guilty of a misdemeanor.

"Section 2. For the purposes of this Act, an artesian well is defined to be any artificial hole made in the ground through which water naturally flows from subterranean sources to the surface of the ground for any length of time.

"Section 3. Waste is defined, for the purposes of this Act, to be the causing, suffering, or permitting any water flowing from an artesian well, to run into any river, creek, or other natural water course or channel, or into any bay or pond (unless used thereafter for the beneficial purpose of irrigation of land or domestic use), or into any street, road, or highway, or upon the land of any person, or upon the public land of the United States or of the State of California, unless it be used thereon for the beneficial purposes of the irrigation thereof or for domestic use, or the propagation of fish. The use of any water flowing from any artesian well for the irrigation of land whenever over five per cent of the water received on such land for such purposes is allowed to escape therefrom, is also hereby declared to be waste within the meaning of this Act; provided, that nothing herein shall prevent the running of artesian water into an artificial pond or storage reservoir, if used thereafter for a beneficial use; provided, such beneficial use shall not exceed one-tenth of one miner's inch of water per acre, perpetual flow, but such user of water shall have the right to cumulate the said amount within any period of the year.[4]

"Section 4. Each day's continuance of such waste shall constitute a new offense under this Act.

"Section 5. Any person violating the provisions of the Act shall, for each offense, upon conviction thereof, be punished by a fine of not less than $25, and not more than $500, or imprisoned in the county jail for a period of not more than six months, or by both such fine and imprisonment. The justice of the peace of the county is given jurisdiction of such cases.

[4] The latter portion of the section was amended to read as above by the Act of March 25, 1909, Stats. & Amdts., 1909, Chaps. 427, 749; Kerr's Bien. Supp., 1906-1909, p. 1408.

"Section 6. All Acts and parts of Acts in conflict with this Act are hereby repealed."[5]

§ 1750. **An Act to prevent the waters of the State from being carried into other States.**—By the Act approved March 3, 1911,[1] it was made unlawful to conduct any of the waters of the State into any other State, for use therein. It is also made the duty of the governor of the State to keep a general oversight over the fresh waters of the State and to see that the same are preserved for the use and benefit of the citizens and inhabitants of the State, and to prevent the waters thereof from being carried or transported into other States. When it is brought to the attention of the governor that it is the intention to so carry or transport any of such waters into any other State, then it is made his duty, through the attorney general, to bring such action as may be necessary to prevent such carrying away or transporting of such waters into another State.[2]

See, also, Assembly Joint Resolution Number 8,[3] relative to diverting the waters of the Truckee River from their natural course, and protesting against the government of the United States from constructing an artificial outlet to Lake Tahoe by driving a tunnel from the Nevada side of said lake to tap said lake beneath the water level and divert its waters through the State of Nevada, for the reason that said lake and watershed lie most largely in the State of California, and to the major portion of the waters of which lake the State of California claims to be the owner.[4]

§ 1751. **The use of water for hydraulic mining.**—"The business of hydraulic mining may be carried on within the State of California wherever and whenever the same may be carried on without material injury to the navigable streams, or the lands adjacent thereto.

5 See, also, for the general discussion upon the subject of artesian waters, Chap. 61, Secs. 1166-1184.

1 Stats. & Amdts., 1911, Chap. 104, p. 271; Kerr's Bien. Supp., 1911, p. 1474.

2 See, also, Act of April 8, 1911, Stats. & Amdts., 1911, Chap. 407, p. 821, amending Sec. 1410, Civil Code, Sec. 1729.

3 Stats. & Amdts., 1911, Chap. 18, p. 1550.

4 That California claims the title to all waters within the State, see amendment to Section 1410, enacted in 1911, Stats. & Amdts., 1911, Chap. 407, p. 821; see, also, Sec. 1720.

See, also, Kerr's Bien. Supp., 1911, p. 584.

"Hydraulic mining, within the meaning of this title, is mining by means of the application of water, under pressure, through a nozzle, against a natural bank."[1] We have discussed, in previous sections, the remedies for the pollution of streams by mining debris.[2]

§ 1752. **An Act establishing the conservation commission.**—By the Act approved April 8, 1911,[1] a commission consisting of three persons, to be appointed by the governor, is thereby created and established "for the purpose of investigating and gathering data and information concerning the subjects of forestry, water, the use of water, water power, electricity, electrical or other power, mines and mining, mineral and other lands, dredging, reclamation and irrigation, and for the purpose of revising, systematizing, and reforming the laws of this State, upon, concerning, regarding, or appertaining to these said subjects."

The duties of the said commission are, "to investigate and examine the laws of the United States, of foreign nations, of the States of the Union, and this State, and the reports and recommendations of persons, officials, commissions, societies, and associations," upon the said subjects, "and to prepare and recommend to the legislature laws, statutes, and constitutional amendments revising, systematizing, and reforming the laws of this State," upon said subjects.

The reports of the said commission are authorized, and it is

For the Act of Congress relating to the California Debris Commission and the regulation of hydraulic mining, see 5 Fed. Stat. Ann., 1905, p. 61; 3 U. S. Comp. Stat., 1901, p. 3553; 27 Stat. L. 507. Section 13 of this Act was amended by Act of Feb. 27, 1907, Supp. Fed. Stat. Ann., 1909, p. 705; 34 Stat. L. 1001.

See, also, for a discussion of this Act, Sec. 1136.

1 Stats. & Amdts., 1911, Chap. 408, p. 822; Kerr's Bien. Supp., 1911, p. 1023.

made the duty of the State officers to assist the said commission; and, for the purpose of carrying out the provisions of the Act, the said commission is authorized to employ such expert, technical, professional, and clerical assistance and upon such terms as they may deem proper. The authority is given to cross all lands in making any investigations. The said commissioners shall receive no salary, but shall be allowed their actual expenses. For the purpose of carrying out the provisions of the Act the sum of $100,000 was appropriated.

§ 1753. **An Act for the protection of the navigability of the State waters.**—By the Act approved May 1, 1911,[1] it was provided that the department of engineering of the State should investigate the practicability of the construction of canals, with dams, locks, and other structures, with the view of determining the utility thereof in aid of commerce and navigation. That said department shall complete such investigations as soon as practicable, consistent with efficiency and accuracy, and make a report thereof to the governor on or before December 1, 1912.[2]

§ 1754. **Acts regulating the extraction of minerals from waters.**—The Act approved April 14, 1911,[1] provided for regulating the extraction of minerals from the waters of any stream or lake within the State, and prohibiting the extraction of such minerals except under lease from, or by express permission of, the State for a period not exceeding 25 years. This Act was further supplemented by the Act of April 27, 1911.[2]

§ 1755. **The irrigation district law.**—One of the most famous irrigation statutes in the country is the Irrigation District Law, which originated in California, where it is commonly known as the "Wright Act," being so named after the author of the bill.[1] This law, forming, as it does, the basis of the irrigation district laws of

1 Stats. & Amdts., 1911, Chap. 742, p. 1445; Kerr's Bien. Supp., 1911, p. 1467.

2 See, also, for the preservation of the navigability of the waters of the United States, Secs. 350-352.

2 Stats. & Amdts., 1911, Chap. 612, p. 1154; Kerr's Bien. Supp., 1911, p. 1198.

1 For the history of the irrigation district law, see Secs. 1366-1432.

most of the Western States,[2] has even invaded those States which formerly so strenuously adhered to the doctrine of State control, or State administrative laws, as the only true system for the control, regulation, and the distribution of waters, notably Wyoming and Colorado.[3] This law, as adopted in the different States, comes more nearly being uniform than any of the other laws governing the subject of waters and water rights. The main principles are the same in the different jurisdictions—which are the control, regulation, and distribution of the waters among the land owners within certain specified districts by the land owners themselves, through the medium of a local public corporation, in which every land owner has a voice—the only difference being in the details of the organization and operation of the law. This law is specially applicable to thickly settled communities, but in such communities it is probably the best law in theory which can be devised under our form of government, although the practical working of the law has not always been satisfactory.

In our discussion upon the subject of irrigation districts in general, we discussed the general features of these laws. Therefore, in this section we will give but a brief abstract of the California law, as it now stands as amended, and references where the same can be found, without giving the construction by the courts.[4]

Upon the subject of organization, it is provided that it must be instituted by a petition to the board of county commissioners, signed by "a majority in number of the holders of title or evidence of title, including the holders of possessory rights under receipts or other evidence of title of the rights of entrymen or purchasers, under any law of the United States, or of the State, to lands susceptible of irrigation from a common source, . . . and representing a majority in value of said lands."[5] An election must be held upon the organization of a district and for the election of its

[4] For the construction of the California law, in connection with the other laws upon the subject, see Chap. 70, Secs. 1404-1409.

[5] Gen. Laws, Henning, 1905, p. 559, Sec. 1; as amended, Stats. & Amdts., 1911, Chap. 317, p. 509, Sec. 2; as amended, Stats. & Amdts., 1909, Chap. 22, p. 12; Kerr's Bien. Supp., 1906-1909, p. 1647, and as further amended, Stats. & Amdts., 1911, Chap. 317, p. 509; Kerr's Bien. Supp., 1911, p. 1124.

officers. Any person residing within the district and possessing all the qualifications required of electors, under the general election laws, may vote upon the proposition.[6]

The board of directors of an irrigation district are given the duties and powers heretofore discussed.[7]

The use of all water, for the purposes of the Act, is declared to be a public use; and all water of the district is to be distributed ratably among the users therein.[8] After the organization of a district, general elections for the purpose of electing its officers must be held at stated periods.[9]

The title to all property acquired is to vest in the district.[10] Money may be borrowed and bonds of a district issued therefor to secure the payment thereof, upon the question being submitted to a vote of the district.[11] A special assessment may be made for the completion of the works.[12] In all general and special assessments all real property in the district must be assessed, and the duties of the assessor are prescribed.[13]

All assessments must be equalized.[14] The taxes must be levied and collected.[15] The delinquent notice must be published, in ac-

cordance with the special provisions of the Act;[16] and also the sale of the property had for delinquent taxes.[17] A redemption of the property sold for assessments may be made.[18] Provisions are also made for the redemption of bonds issued and for the payment of interest.[19]

The board of directors is authorized and empowered to let contracts for the construction of all necessary works and to acquire property for the district.[20] Provisions are also made for the governing of the board of directors and for their compensation.[21] The board also has the power to provide for special assessments.[22] But the board of directors has no power to incur indebtedness except as specially provided in the Act itself.[23] Full provisions are made for governing the use of the water.[24] All rights are exempted from taxation.[25] Special funds for the purposes of the Act are created.[26]

Confirmatory proceedings may be had for the purpose of validating bonds and all proceedings in the organization of the district.[27]

Land may be excluded from a district,[28] and also included.[29]

The bonded indebtedness may be redeemed.[30] The board of directors is also given the power to lease water.[31] The destruction of unsold bonds is provided for.[32] Saving clauses are provided.[33]

Since the adoption of the main body of the Act, the legislature of the State has also passed a number of special Acts, which are amendatory and supplemental to the main Act; these will be given in their order.

In 1897 a special Act provided for the issue and sale, or the funding of bonds of irrigation districts, and proceedings to test the validity of the same.[34]

In 1903 provisions were made for the dissolution of irrigation districts, the ascertainment and discharge of their indebtedness, and the distribution of their property.[35]

By the Act of March 18, 1907,[36] it was made the duty of the board of directors to provide for any and all drainage made necessary by irrigation provided for by such laws, "and all laws respecting such irrigation or such irrigation districts shall be so construed, applied, and enforced as to apply to such drainage, as well as such irrigation."

By the Act of March 19, 1909,[37] it was provided for the payment in two installments of the assessments levied under the provisions of the Act.

The Act of April 8, 1911,[38] amending Section 1410 of the Civil Code, excepted the appropriation of water by irrigation districts for power purposes from the 25-year limit, placed by the Act upon appropriations by corporations for such purposes.[39]

39 See, also, for the Water Power Act, approved April 8, 1911, Stats. & Amdts., 1911, Chap. 406, p. 813; Kerr's Bien. Supp., 1911, p. 584.

For this Act, see, also, Sec. 1732.

The Act approved May 1, 1911,[40] provides for the release of all claims and liens arising from irrigation bonds and interest coupons voluntarily surrendered for cancellation, and to provide for the establishment of a record of such release by an action in court and a hearing and judgment thereon.

The Act approved March 9, 1911,[41] provides under what circumstances bonds of irrigation districts may become legal investments for funds of banks, banking associations, trust companies, insurance companies, and for State school funds, and providing that such bonds may be deposited as security, and also providing for a commission for approving such bonds.

By the Act approved March 1, 1911,[42] it was provided that the "Turlock Irrigation District, as formed by the board of supervisors of Stanislaus County, State of California, and as now existing, is hereby recognized and declared valid, and all proceedings on organization and formation are hereby approved and declared valid."

Similar validating Acts were also passed relative to the Oakdale Irrigation District,[43] the Modesto Irrigation District,[44] and the San Joaquin Irrigation District.[45]

By the old Act of 1877,[46] the township of Los Nietos was created an irrigation district to be known as "Los Nietos Irrigation District."

§ 1756. **Municipal water districts—Act of April 26, 1909.**—By the Act of April 26, 1909,[1] it was provided that a municipal water district may be organized and incorporated and managed as therein provided and may also exercise the powers expressly granted or necessarily implied.

1 Stats. & Amdts., 1909, Chap. 724, p. 1097; Kerr's Bien. Supp., 1906-1909, p. 1817.

In order to organize such a district, the legislative body of the municipality must pass an ordinance reciting: 1. The name of the city adopting the ordinance; 2. That the public interest requires the incorporation of a municipal water district; 3. The names of the municipalities which it is desired to include within the district; 4. The name of the district, which shall include the words "municipal water district." Notice must be sent to the other municipalities proposed to be included in such district which by ordinance may approve or disapprove of the said ordinance. Within 30 days after the receipt of all the ordinances passed by the municipalities named in the initiatory ordinance, the legislative body of the municipality initiating the proceeding shall fix a day for holding a special election in each of the municipalities approving, at which shall be submitted to the electors thereof the proposition of organizing such municipal water district. Within 30 days after the receipt of the certificate showing the result of the election, if it appears therefrom that the proposition submitted was approved by a majority of the votes cast in each municipality, the legislative body receiving such certificates shall certify to the Secretary of State the passage of the ordinance and the result of the election. Upon the receipt of the certificate mentioned, the Secretary of State shall, within ten days, issue his certificate, reciting that the municipal water district has been duly incorporated.

The powers granted to such municipal water district as enumerated in the Act are: 1. To have perpetual succession; 2. To sue and be sued; 3. To adopt a seal; 4. To take by grant, purchase, gift, devise, or lease, hold, use, enjoy, and to lease or dispose of real and personal property of every kind within or without the district, necessary to the full exercise of its powers; 5. To acquire, or contract to acquire, lands, rights, and privileges, and construct, maintain, and operate conduits, pipe lines, reservoirs, works, machinery, and other property useful or necessary to store, convey, supply, or otherwise make use of water for the benefit of the district; 6. To sell water under the control of the district to the municipalities comprising the same; and when there is a surplus above their needs, it may sell or otherwise dispose of the same outside of the district to persons, firms, public or private corporations; 7. To have and exercise the right of eminent domain in the manner provided by law, "and may condemn any existing water works or system, or any portion

thereof owned by any person or corporation"; 8. To borrow and to issue bonds therefor; 9. To cause taxes to be levied for the purpose of paying any obligation of the district; 10. "To make contracts, to employ labor and to do all acts necessary for the full exercise of the foregoing powers."

The powers enumerated shall, except as therein provided, be exercised by a board of directors. The mayor or president of the board of trustees of each municipality shall be *ex officio* a member of said board. Each municipality having 5,000 legal and registered voters shall choose by and from the members of its legislative body one additional director; and each municipality for each and every 10,000 voters over 5,000 shall choose one additional director. At a meeting of the board of directors, the said board shall choose three commissioners who shall constitute the commissioners of said district, but no director shall be eligible to appointment to such commission. The said commissioners are given the power to make and enter into all contracts, appoint a secretary and such other assistants as may be necessary, and to fix their compensation and prescribe their duties. The commissioners shall receive such compensation as the board of directors shall determine and shall serve during its pleasure.

Whenever the board of directors deems it necessary for the district to incur a bonded indebtedness it shall by resolution so declare and state the purpose and submit the proposition to the electors of the district as in the Act provided. It is made the duty of the commissioners to take charge of the actual construction of the works and to deliver the water to the several municipalities in the district, but they have no supervision of any distributing systems of such municipalities. The commissioners in furnishing the water to any municipality shall fix such rates as will pay the operating expenses. If, from any cause, the revenues of the district shall be inadequate to pay the principal or interest of any bonded debt as it becomes due, then the board of directors may cause a tax to be levied as in the Act provided. Provisions are also made for the exclusion or inclusion of any municipality from the district.[2]

[2] See, also, for the appropriation and ownership of waters by municipalities, Secs. 1731, 1756.

By still another Act approved in 1911 [3] it was provided that:

"Sec. 1. A municipal water district may be organized and incorporated and managed as herein expressly provided and may exercise the powers herein expressly granted or necessarily implied.

"Sec. 2. The people of any county or portion of a county, whether such portion includes unincorporated territory or not, in the State of California, may organize a municipal water district under the provisions of this Act by proceeding as herein provided."

The Act further provides for the organization of such districts by a petition to the board of supervisors of the county, signed by at least 25 per cent of the freeholders within the boundaries of the proposed municipal water district, which petition shall set forth and particularly describe the proposed boundaries and other data as prescribed by the Act. The district must be organized upon the vote upon the proposition. The Act also provides for the election of officers and their duties.

It is further provided that such district have the power to have perpetual succession; to sue and be sued; to adopt a seal; to take by grant, prescription, gift, etc., and to lease and dispose of real and personal property of every kind, within or without the district; to acquire a contract; to acquire land, rights, and privileges; to construct and maintain conduits, pipe lines, reservoirs, and other works; to sell water under the control of the district to the municipalities and precincts comprising the same and to the inhabitants thereof; to have and exercise the right of eminent domain; to borrow money, incur indebtedness, and issue bonds; to cause taxes to be levied for the purpose of paying any obligation of the district; to make contracts and employ labor, and do all acts necessary for the full exercise of the foregoing powers.

"Sec. 28. Nothing in this Act shall be so construed as repealing or in anywise modifying the provisions of any other Act relating to water or the supply of water to, or the acquisition thereof by, municipalities within this State."

§ 1757. **Reclamation districts—Drainage.**—For the purpose of the reclamation of lands by the means of drainage, and for the protection of lands from overflow, the legislature of California has pro-

[3] Stats. & Amdts. 1911, p. 1290; Kerr's Bien. Supp., 1911, p. 1234.

vided a number of important Acts. These Acts resemble in many ways the Acts relating to irrigation districts, discussed in previous portions of this work.[1]

One of the most important of these Acts is that relating to the organization and operation of "Reclamation Districts."[2]

Upon the question of organization of such districts it is provided that: "Whenever the holders of title or evidence of title representing one-half or more of any body of swamp and overflowed, salt-marsh, or tide lands, or other lands subject to flood or overflow susceptible of one mode of reclamation, desire to reclaim the same, they may present to the board of supervisors of the county in which the lands, or the greater part thereof, are situated, at a regular meeting of the board, a petition setting forth that they propose to form a district for the reclamation of the same, a description of the lands by legal subdivisions or other boundaries, the county in which they are situated, the number of acres in the proposed district, and each tract, with the names (if known) of the owners thereof, and designating as unsold any lands not reduced to private ownership."[3]

1 For irrigation districts in general, see Chap. 70, Secs. 1386-1432.

For the California irrigation district law, see Sec. 1755.

21 Pol. Code, Secs. 3467-3470; 1 Kerr's Cyc. Codes, p. 832.

Property may be condemned for reclamation purposes, and material may be taken for construction.[22]

Whenever any district susceptible of one mode of reclamation is entirely owned by parties who desire to reclaim the same, the owners may reclaim the same without the intervention of trustees by presenting a petition to the board of supervisors. If the petition is granted, the owners have all the rights, immunities, and privileges granted to boards of trustees; and in all proceedings the names of the owners may be used instead of the names of trustees.[23]

When the works of reclamation are in progress of construction, the payment of interest by purchasers in such districts is suspended.[24] The trustees, or owners, must certify to the completion of the work.[25] The register must thereupon credit each purchaser in the district with payment in full for such lands, and the purchasers are entitled to patents therefor.[26]

Districts organized under old laws may be reorganized under the provisions of the chapter, and the trustees may compromise any debts of the same.[27]

The owners of certain tracts of unreclaimed lands may, by petition to the board of supervisors, have the land set off in a separate

reclamation Act,[36] it was provided that bonds might be issued by reclamation districts, where, in the opinion of the board of trustees, they were necessary.[37]

§ 1758. **Levee districts.**—Another district organization provided for by the statutes of California is that for levee districts. The procedure for the organization and operation of levee districts is similar to that of reclamation districts, discussed in the previous section.[1]

By the Act of March 20, 1905,[2] it is provided for the formation of districts in the various counties of the State and for the erection of levees, dikes, and other works for the purpose of protecting the lands within such districts from overflow, and to levy assessments to erect and construct and maintain such works, and to pay the necessary costs and expenses of maintaining such districts.

By the supplementary Act of March 8, 1911,[3] levee districts were authorized to borrow money and to issue bonds therefor for the purpose of building, constructing, or repairing levees of a district.[4]

§ 1759. **Protection districts.**—Another district organization was authorized by the recent statutes of California, termed protec-

tion districts. By the Act of February 23, 1907,[1] it was provided for the organization of districts for the protection of lands of farming or other communities or neighborhoods within the State from overflow or damage from the waters of any innavigable stream, water course, canyon, or wash, extending by, through, or over such community or neighborhood, and to provide for the acquisition of lands, rights of way, and other property by purchase, gift, or condemnation, for the extending, straightening, improving and maintaining the channels of such streams, etc., and confining said waters in such channels and preventing overflow thereof, and for the construction by said districts of the necessary works for said purposes. And for the purposes of the Act, money may be borrowed by such district and bonds issued therefor. In the main, the provisions of the Act follow those of reclamation districts, discussed in a previous section of this chapter.[2]

§ 1760. **Overflow districts.**—By a recent statute of the State of California, another district organization is provided for relating to waters termed "overflow districts." By the Act of May 1, 1911,[1] it is provided that whenever one-half or more of the voters residing within a proposed district of swamp, overflow, or other lands lying within the State, one-third of which are liable to be flooded by the waters of any stream or lake, and more than one-half of said lands requiring irrigation during a portion of the year, susceptible of one mode of irrigation and reclamation, desire to reclaim and irrigate the same, they may present to the board of supervisors of the county in which the lands or the greater portion thereof are situated, a petition setting forth that they propose to form an overflow district. The proceedings for the organization of such districts and the man-

1 Stats. & Amdts., 1907, Chap. 25, p. 16; Kerr's Bien. Supp., 1906-1909, p. 1685; as amended, Stats. & Amdts., 1911, Chap. 266, p. 446; Kerr's Bien. Supp., 1911, p. 1257.

2 See Sec. 1757.

The above Act held constitutional in Keech v. Joplin, 157 Cal. 1, 106 Pac. Rep. 222.

Barnes v. Board of Supervisors of Colusa County, 13 Cal. App. 760, 110 Pac. Rep. 820, holding that an earlier Act upon the same subject was constitutional.

See, also, Lamb v. McMullin, 157 Cal. 14, 106 Pac. Rep. 229; Huton v. Woodbridge Protection Dist., 79 Cal. 90, 16 Pac. Rep. 549, 21 Pac. Rep. 435.

1 Stats. & Amdts., 1911, Chap. 718, p. 1397; Kerr's Bien. Supp., 1911, p. 1410.

agement and control of the same are largely similar to those for reclamation districts, discussed in a previous section of this chapter.[2]

§ 1761. **Storm water districts.**—The Act of March 13, 1909,[1] provides for the formation, organization, and government of storm water districts, for the purpose of protecting the land therein from damage from storm water and from the waters of innavigable streams, water courses, canyons, or washes, for the construction of the necessary works of protection by said districts, and for the levying of taxes and assessments to pay the costs of construction and maintaining such improvements. The provisions of the Act are largely identical with the provisions of the Act for the reclamation of swamp lands, discussed in a previous section of this chapter.[2]

§ 1762. **Provisions in aid of the National Reclamation Act.**—There are a number of provisions in the California statutes in aid of the National Reclamation Act. The Act of 1905 [1] provides for the co-operation of the State with the Federal Government relative to irrigation projects under the National Reclamation Act, with the proviso added that it does not "interfere with the water already appropriated or in reservoirs or now in use for irrigation purposes, or domestic purposes, under the laws of this State."

By the Act of June 9, 1906,[2] a right of way was granted to the United States for the construction of works in San Joaquin County, in said State.

The Act of March 11, 1907,[3] provides for the joint investigation with the Federal Government of the water resources of the State.

The Act of March 20, 1907,[4] provides for the recordation of contracts and subscription agreements to stock in Water Users' Associations, by using the printed blank forms therefor.

The Act of March 21, 1907,[5] granted general rights of way over

all public lands of the State to the United States for the purpose of constructing all works under the provisions of the National Reclamation Act.

But see the Act approved March 3, 1911,[6] to prevent the waters of the State from being carried into another State, and the protests by Assembly Joint Resolution No. 8[7] against the proposed diverting of the waters from Lake Tahoe, which lake lies partly in California and partly in Nevada, by a Government project for the purpose of irrigating Nevada lands.

**§ 1763. Nuisances relating to waters.**—The statutes upon the subject of nuisances provide as follows:

"Anything which is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property, or unlawfully obstructs the free passage or use, in the customary manner, of any navigable lake, or river, bay, stream, canal, or basin, or public park, square, street, or highway, is a nuisance.[1]

"A public nuisance is one which affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal."[2]

The wasting of water from artesian wells is also declared to be a public nuisance.[3]

§ 1764. **The pollution of waters.**—The poisoning of any spring, well, or reservoir, is punishable by imprisonment in the State prison for a term of not less than one year or more than ten years.[1]

The pollution of waters by water-closets or the carcass of dead animals, or offal of any kind, or by live stock of any kind, which waters are drawn for the supply of any portion of the inhabitants of the State, is made a misdemeanor.[2]

The Act of March 23, 1907,[3] an Act for the preservation of the public health of the people of the State, and empowering the State Board of Health to enforce its provisions, and providing penalties for the violation thereof, contains a number of provisions upon the subject of the pollution of waters. And any person violating the provisions of the Act shall be deemed guilty of a misdemeanor.

By the Act of March 6, 1909,[4] the pollution of the waters of rivers and streams is also made a misdemeanor.

§ 1765. **Construction and repair of bridges.**—Upon the subject of the construction and repair of bridges it is provided: "No canal, flume, or other appliance for the conducting of water must be so laid, constructed, or maintained as to obstruct any public highway; and every person or corporation owning, maintaining, oper-

ating, or using any such canal, flume, or appliance, crossing or running along any public highway, must construct, maintain, and keep in repair such bridges across the same as may be necessary to the safe and convenient use of such highway by the public; and on failure so to do, the board of supervisors of the county, after seven days' notice in writing to said person or corporation, may construct or repair such bridge or bridges, and recover of such person or corporation the amount of the expenditure made in so doing."[1]

§ 1766. **Taxation of water works.**—Upon the subject of taxation of ditches and canals, it is provided: "Water ditches constructed for mining, manufacturing, or irrigating purposes . . . must be assessed the same as real estate by the assessor of the county at a rate per mile for that portion of such property as lies within the county."[1]

It is provided that: "The rights of way, ditches, flumes, pipe lines, dams, water rights, reservoirs, and other property of like character belonging to any irrigation district shall not be taxed for State and county or municipal purposes."[2]

§ 1767. **Criminal statutes.**—There are a number of provisions throughout the statutes relating to waters, and the Penal Code, which provide for penalties for the violation of the law.

Any person violating the provisions of the Artesian Well Act is punishable by a fine of not less than $25 and not more than $500, or imprisonment in the county jail for a period of not more than six months, or by both.[1]

See, also, Sec. 1947.

Whoever obstructs or injures any highway, or diverts any water course thereon, or drains water from his land upon any highway, to the injury thereof, by means of ditches or dams, is liable to a penalty of $10 for each day such obstruction or injury remains.[2]

The stealing of water is made a misdemeanor;[3] so, also, is the taking of water from any works, with intent to defraud, or the interference with any gate or other apparatus used for the control or measurement of water, or the emptying into any such works any rubbish, filth, or obstruction.[4] The failure to place sufficient screens over the intake pipe, flume, ditch, or canal, when required to do so by the fish commissioners, is also made a misdemeanor.[5]

"Every person who unlawfully prevents, hinders, or obstructs any person from peaceably entering upon or establishing a settlement or residence on any part of the public land of the United States within the State of California, subject to settlement or entry under any of the public land laws of the United States, or who unlawfully hinders, prevents, or obstructs free passage over or through the public lands of the United States within the State of California, for the purpose of entry, settlement, or residence, as aforesaid, is guilty of a misdemeanor."[6]

The destroying or injuring of any bridge, dam, canal, flume, aqueduct, levee, embankment, or other works, or making apertures in the same, or who, between the first day of October and the fifteenth day of April, plows up or loosens the soil in the bed or on the sides of any natural water course or channel, without removing such soil within twenty-four hours, is guilty of a misdemeanor and punishable by a fine of not less than $100 and not exceeding $1000, or by imprisonment in the county jail not exceeding two years, or by both.[7]

**§ 1768. Riparian rights in California.**—By the Act of April 13, 1850,[1] the common law of England was adopted in the following terms:

"The common law of England, so far as it is not repugnant to or inconsistent with the constitution of the United States, or the constitution or laws of this State, is the rule of decision in all courts of this State."[2]

The State of California, as we have before discussed, has been one of the most strenuous to adhere to and uphold the common law of riparian rights, both by its statutory provisions and court decisions. At the same time it was the first to adopt the Arid Region Doctrine of appropriation of waters for beneficial uses.[3] Thus the two doctrines have existed, and now do exist, side by side in the same jurisdiction. The strict construction of the common law rule has, however, under the more recent decisions, been modified to a considerable extent, so that at the present time it may be stated to be the law of that State that a riparian owner, without the actual use of the water, can not insist upon the undiminished flow of a stream as against an appropriator applying the water to a beneficial use and purpose.[4] Therefore, it may be also stated that the present rule is that, regardless of by what method, the claimant to water acquired his right, whether as a riparian proprietor or as an appropriator, such right can only be continued by the actual application of the water claimed to some beneficial or useful purpose.[5] It is not, however, without considerable contention and litigation that this

1 Stats., 1850, p. 219; now found in Pol. Code, Sec. 4468; 1 Kerr's Cyc. Codes, p. 1195.

2 See Katz v. Walkinshaw, 141 Cal. 116, 70 Pac. Rep. 663, 74 Pac. Rep. 766, 64 L. R. A. 236, 99 Am. St. Rep. 35.

See, also, cases cited below.

3 For history of the Arid Region Doctrine, see Secs. 595-626.

4 For a discussion of this subject, see Secs. 509, 549.

5 Modoc etc. Co. v. Booth, 102 Cal. 151, 36 Pac. Rep. 431; Miller v. Bay Cities W. Co., 157 Cal. 256, 107 Pac. Rep. 115, 27 L. R. A., N. S., 772.

See, also, Secs. 1611-1615.

"Even if at common law or under the civil law it was a part of the usufructuary right of the riparian owner to have the water flow by for no purpose other than to afford him pleasure in its prospect, such is not the rule of decision in this State." San Joaquin etc. Co. v. Fresno etc. Co., 158 Cal. 626, 112 Pac. Rep. 182.

Turner v. James Canal Co., 155 Cal. 82, 99 Pac. Rep. 520, 22 L. R. A., N. S., 401, 132 Am. St. Rep. 59, 17 Am. & Eng. Ann. Cas. 823.

rule was adopted, as will be seen from the many decisions of the Supreme Court of the State holding to all sides of the question. These decisions are absolutely impossible to reconcile to any one view of the question, and, therefore, we shall not attempt to do so. In different portions of this work we have discussed this proposition, including the holding of the California Court, and a further discussion here seems to be unnecessary.[6] Not only have the courts of California modified their decisions in regard to the rights of riparian proprietors, but the statute has also been modified. Section 1422 of the Civil Code formerly read as follows: "The rights of riparian proprietors are not affected by the provisions of this title."[7] By Act of the legislature, approved March 15, 1887,[8] this section was repealed, with the following saving clause: "Provided, that the repeal of this section shall not in any way interfere with any rights already vested." This repealing Act was passed by the legislature the year following the decision in the case of Lux v. Haggin,[9] upholding the doctrine of riparian rights in California. So it may be said that in the State of California at the present time there is no statutory law upholding the law of riparian rights, except those which vested prior to the repeal of Section 1422 of the Civil Code as it originally existed.[10]

6 For riparian rights in general, see Secs. 450-551.

For irrigation as a riparian right, see Secs. 498-525.

**§ 1769. Particular features of the State.**—Colorado is the summit of the continent. Its waters flow to the north, south, east, and

west. The western two-thirds of the State is traversed with immense mountain ranges. The eastern portion of the State is a continuation of the broad, flat prairies of Western Kansas and Nebraska. These plains stretch from the eastern base of the foothills and by a long and gentle slope fall in the two hundred miles from the mountains to the eastern border from an altitude of from 5,000 to 6,000 feet to 3,500 feet. This section of the country is very dry and arid. Just west of the eastern range lie four mountain valleys, known as North Park, Middle Park, South Park, and San Luis Valleys.

The headwaters of many of the large rivers of the West are in Colorado. The North Platte River rises in North Park; the South Platte River in the mountains west of Denver; the Arkansas River near the mining town of Leadville; the Rio Grande in the San Luis Valley, and many of the largest tributaries of the Colorado River are in the western part of the State.

The State is divided into two portions by the continental divide with different conditions affecting the question of irrigation—the eastern portion with much land and relatively little water, the western portion with these conditions reversed. According to the meteorological report, the rainfall of the State varies according to locality, altitude, and other conditions, from about seven inches at Saguache to about twenty-five inches at Breckenridge. The cold climate in winter and the great altitude of Colorado make it impossible to raise the high-priced citrus or semi-tropical fruit, or to practice the degree of intensive farming for which Arizona and California are noted. The thermometer varies according to the altitude and other conditions from extremely warm weather in summer to twenty degrees or more below zero in winter.[1]

Surface Water Supply of the Colorado Rriver Drainage Above Yuma, by R. I. Meeker and H. S. Reed, Dist. Hydrographers, 1908, Water Supply Paper No. 211, U. S. Geological Survey.

Surface Water Supply of the United States, Part IX, Colorado River Basin, prepared under the direction of M. O. Leighton, by W. B. Freeman and R. H. Bolster, 1910, Water Supply Paper No. 249, U. S. Geological Survey.

Same as last above, continued, Water Supply Paper No. 219, 1911.

**§ 1770. Irrigation in the State.**—The State of Colorado possesses a great variety of physical and climatic conditions, varying from those of the highest mountain regions where vegetation entirely ceases to grow, to those valleys where the more temperate zone fruits can be raised in great profusion. Various sections of the State are especially adapted to certain crops, owing to favorable climatic and soil conditions. It therefore follows that a settler intending to locate in Colorado should first decide what kind of farming he desires to engage in, and then locate in the section best adapted to that particular industry. Since the first edition of this book was written, the science of irrigation has received a great impetus in the State of Colorado, and many systems of great size have been constructed. But, as is the case in many other Western States, the water supply direct from the streams is entirely inadequate to the demand; and, based upon this demand the important movement for storage reservoirs is receiving attention and it may be said that the State of Colorado is well within the reservoir period of irrigation. This movement, formerly most marked in regions where settlements have been made the longest and consequently where the demands for water are the greatest, has spread to other portions of the State and we find that where there was arable land and water sufficient to irrigate the same, even in the less settled portions, great storage reservoirs have been constructed by private enterprises, by the State, and by the Government. Many of these lands are now open for settlement. Colorado has taken advantage of every law available whereby irrigation could be extended throughout the boundaries of the State. It accepted the provisions of the Carey Act, it passed Acts in aid of the National Reclamation Act, the legislature adopted the law for irrigation districts, and, in fact, every law which tended toward the development of the State by this method has been adopted by the legislature.

At this writing, according to the United States census of 1910, Colorado in 1909 had more land under irrigation than had any other State of the Union. The figures given by such report are as follows: The total area irrigated in 1909 was 2,792,032 acres, as against 1,611,271 acres in 1899, an increase of 1,180,761 acres or 73.3 per cent. The total area enterprises were capable of irrigating in 1910 was 3,990,166 acres. The acreage included in enterprises completed or under construction in 1910 was 5,917,457 acres. Of

the area irrigated in 1909, as above stated, according to the report, there were 16,600 acres under the United States Reclamation Service, 1,020 acres under the United States Indian Service, 485 acres under the Carey Act, 115,304 acres under irrigation districts, 1,273,141 acres under co-operative enterprises, 159,457 acres under commercial enterprises, 1,226,025 acres under individual and partnership enterprises.[1]

§ 1771. **Criticism of the Colorado laws.**—The statutory laws of the State of Colorado governing the subject of waters and water rights are as elaborate and complete as those of any of the Western States. They are based upon the law of State control, as provided by Article XVI, Sections 5 and 6 of the State constitution,[1] which provide that the water of the natural streams is thereby declared to be the property of the public and that the same is dedicated to the use of the people of the State, subject to appropriation, and that the right to divert the unappropriated water to beneficial uses shall never be denied. The legislature, with this foundation, has elaborated a most complete system of laws upon the subject. And we will add that the statutory laws and also the court decisions have always been consistent and with the end always in view that the right to the use of water in that State can be acquired and maintained by the actual application of such water to some beneficial use or purpose.

The Colorado constitutional dedication above referred to was the first to be declared by any State, although, since its adoption in 1876 a number of the States either by constitutional provisions or

1 Irrigation near Rocky Ford, Colorado, by A. E. Wright, Irrigation Engineer, 1905, Annual Report of Irrigation and Drainage Investigations for 1904, Separate No. 8, Office of Experiment Stations, U. S. Dept. of Agriculture.

Irrigation in Colorado, by C. W. Beach and P. J. Preston, former Deputy State Engineers of Colorado, prepared under the direction of Samuel Fortier, Chief of U. S. Irrigation Investigations, Office of Experiment Station, Bulletin No. 218, U. S. Dept. of Agriculture.

Seepage, or Return Water from Irrigation, by L. G. Carpenter, Meteorologist and Irrigation Engineer, Bulletin No. 33, State Agricultural College of Colorado.

See, also, the most excellent Fifteenth Annual Report of the State Engineer of Colorado, Mr. Charles W. Comstock, State Engineer, 1911.

1 See Sec. 1772.

For the law of State control, or State administrative laws, see Chap. 68, Secs. 1337-1367.

by legislative enactment have adopted provisions of similar purport. Even California, so hard to break away from ancient precedents, by the Act of April 8, 1911, in amending Section 1410 of the Civil Code, has followed the example of Colorado and has declared that: "All water or the use of water within the State of California is the property of the State of California."[2]

The State of Colorado has ever been jealous and watchful of the claim to the waters flowing within its boundaries, as is indicated by the fight it put up in the case of Kansas v. Colorado and the recent Acts of the legislature relative to the alleged interference by the United States in such waters by the National Reclamation projects, where it is claimed some of the waters arising in Colorado will be diverted into other jurisdictions.[3]

Although Colorado was the first to evolve the system of State control, or the State administration of waters, it has never gone to the extremes that some of the other Western States have later gone in that regard. The State Engineer is at the head of the system, but there are no provisions that in order to appropriate water there must be an application for the same made to him as is the case in those States which follow the Wyoming system.[4] He is, however, given the power to approve or reject the works constructed for the purpose of diverting or storing the water.[5] He is not given the power to in anywise determine or adjudicate existing rights. This is left to the courts, where it properly belongs, in special proceedings provided by the statute for that purpose.[6] The duty devolves upon the State Engineer to supervise the distribution of the water in accordance with the decrees of the courts.

Although the foremost in point of time in the adoption of many important features of water laws, the State of Colorado has never been loth nor has it hesitated to adopt special features of the laws of

2 Civil Code, Sec. 1410, as amended, Stats. & Amdts., 1911, Chap. 407, p. 821; Supp. Kerr's Cyc. Codes, 1911, p. 584.

5 See Sec. 1774.

6 For the adjudication of water rights in Colorado, see Secs. 1790-1793.

For the statutory adjudication of water rights, see Chap. 79, Secs. 1567-1584.

other States where they have been worked out to the satisfaction of the general public, especially among whom are the actual consumers of the water. It adopted the Wright irrigation district law of California,[7] and has gone one step in advance by providing that the State lands may be included within such districts and assessed the same as though they were owned by private parties. Of course, in this respect the State will be the gainer in the sale of these lands by the difference between their value in their raw state plus the cost of reclamation and their value after the same have been reclaimed and provided with a permanent water right.

The State was also quick to accept the Act of Congress known as the Carey Act the same year that it went into effect, and has evolved an elaborate law governing the acquisition of both lands and water under that system.[8] The State has also been foremost in the enactment of provisions for the construction of State reservoirs and canals, both for the reclamation of its own lands and for supplementing the supply of water needed by the settlers.[9] The provisions in aid of the National Reclamation Act are also full and complete.[10]

Take it all in all, the State of Colorado is to be congratulated upon its wise provisions governing the waters and water rights within its boundaries, and especially upon the fact that, at an early date, it absolutely abrogated the common law rule of riparian rights as to the undiminished flow of the natural streams, a rule so inapplicable to the arid condition of the State.[11]

§ 1772. **Constitutional provisions.**—Upon the subject of waters and water rights, Article XVI, Sections 5, 6, 7, and 8, of the constitution, declare:

"Section 5. The water of every natural stream, not heretofore appropriated, within the State of Colorado, is hereby declared to be the property of the public, and the same is dedicated to the use of

For the National Reclamation Act, see Chap. 65, Secs. 1235-1286.

11 See Sec. 1804.

the people of the State, subject to appropriation as hereinafter provided."[1]

By Article XVI, Section 6, the right of the appropriation and use of water is guaranteed, as follows:

"Sec. 6. The right to divert the unappropriated waters of any natural stream to beneficial uses shall never be denied. Priority of appropriation shall give the better right as between those using the water for the same purpose; but when the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using water for agricultural purposes shall have the preference over those using the same for manufacturing purposes."[2]

1 1 Colo. Code Ann., Morr. Ed., 1910, p. 269.

See Wheeler v. Northern Colo. Irr. Co., 10 Colo. 582, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; Armstrong v. Larimer County D. Co., 1 Colo. App. 49, 27 Pac. Rep. 235; Strickler v. Board of Comrs. of Montrose Co., 28 Colo. 427, 65 Pac. Rep. 26, holding that this provision was adopted for the sole benefit of those canals which are exclusively used for irrigation of lands owned by those who own the canals in whole or in part, but not where the water is sold for revenue.

[1] See Constitution, Article XVI, Sections 5 and 6.

See Sec. 1772.

For riparian rights in Colorado, see Sec. 1804.

The right to appropriate water is a property right. Cash v. Thornton, 3 Colo. App. 475, 34 Pac. Rep. 268.

"Property rights in water consist not alone in the amount of the appropriation, but, also, in the priority of the appropriation. It often happens that the chief value of an appropriation consists in its priority over other appropriations from the same natural stream. Nichols v. McIntosh, 19 Colo. 22, 34 Pac. Rep. 278.

The right of priority of appropriation does not depend upon the *locus* of application. Coffin v. Left Hand D. Co., 6 Colo. 443; Hammond v. Rose, 11 Colo. 524, 19 Pac. Rep. 466, 7 Am. St. Rep. 258.

The rights of appropriators on the

Although the common law of riparian rights is abrogated in Colorado by the old Act of 1861, still retained in the statutes, and the owners of lands on streams are given the *special statutory* right "to the use of the water of said stream, creek, or river for the purposes of irrigation, and making said claim available to the full extent of the soil for agricultural purposes."[2]

main stream, when prior, are not subject to those on a tributary of the same stream. Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Platte Valley Irr. Co. v. Buckers, 25 Colo. 77, 53 Pac. Rep. 334; Patterson v. Payne, 43 Colo. 184, 95 Pac. Rep. 301.

Water appropriated for a non-absorbing use, such as for power, and discharged into the stream after such use, is subject to further appropriation. Cache La Poudre Res. Co. v. Water Supply etc. Co., 25 Colo. 161, 53 Pac. Rep. 331, 46 L. R. A. 175, 71 Am. St. Rep. 331; Windsor etc. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

The appropriation of the underflow of streams is governed by the same rules of law as streams flowing upon the surface. Medano Ditch Co. v. Adams, 29 Colo. 317, 68 Pac. Rep. 431.

See, also, Buckers etc. Co. v. Farmers' etc. Co., 31 Colo. 62, 72 Pac. Rep. 49; Platte Valley Irr. Co. v. Buckers etc. Co., 25 Colo. 77, 53 Pac. Rep. 334.

To constitute an abandonment of a water right there must be a concurrence of an intention to abandon with actual relinquishment of the property. Nichols v. Lantz, 9 Colo. App. 1, 47 Pac. Rep. 70.

See, also, Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Hall v. Lincoln, 10 Colo. App. 360, 50 Pac. Rep. 1047; Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304; Platte Valley etc. Co. v. Central etc. Co., 32 Colo. 102, 75 Pac. Rep. 391; Boulder etc. Co. v. Leggett etc. Co., 36 Colo. 455, 86 Pac. Rep. 101; Colorado etc. Co. v. Rocky Ford etc. Co., 3 Colo. App. 545, 34 Pac. Rep. 580; Beaver Brook etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066; Alamosa Canal Co. v. Nelson, 42 Colo. 140, 93 Pac. Rep. 1112; Fornwald v. Nelson, 42 Colo. 178, 93 Pac. Rep. 1115; Peterson v. Durkee, 15 Colo. App. 258, 62 Pac. Rep. 370; People v. Farmers' etc. Co., 25 Colo. 202, 54 Pac. Rep. 626; Greer v. Heiser, 16 Colo. 306, 26 Pac. Rep. 770; New Mercer etc. Co. v. Armstrong, 21 Colo. 357, 40 Pac. Rep. 989; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; North American Exp. Co. v. Adams, 104 Fed. Rep. 404, 45 C. C. A. 185, 21 Morr. Min. Rep. 65; Lower Latham D. Co. v. Louden Irr. Co., 27 Colo. 267, 60 Pac. Rep. 629, 83 Am. St. Rep. 80; Hector M. Co. v. Valley View M. Co., 28 Colo. 315, 64 Pac. Rep. 205; Butterfield v. O'Neil, 19 Colo. App. 7, 72 Pac. Rep. 807; Cooper v. Shannon, 36 Colo. 98, 85 Pac. Rep. 175, 118 Am. St. Rep. 95; O'Brien v. King, 41 Colo. 487, 92 Pac. Rep. 945; Buckers etc. Co. v. Farmers' etc. Co., 31 Colo. 62, 72 Pac. Rep. 49.

App. 380, 75 Pac. Rep. 598.

Upon the subject of the right to water developed through mines, it is provided as follows:

"That hereafter, when any person or persons, or corporation, shall be engaged in mining or milling, and in the prosecution of such business shall hoist or raise water from mines or natural channels, and the same shall flow away from the premises of such persons or corporations to any natural channel or gulch, the same shall be considered beyond the control of the party so hoisting or raising the same, and may be taken and used by other parties, the same as that of natural water courses." [5]

By Article XVI, Section 6, it is declared that those using water for domestic purposes shall have the preference over those claiming the water for any other purpose.[6] In conformity with the provision of the constitution, it is further provided by the statute that: "Water claimed and appropriated for domestic purposes shall not be employed or used for irrigation or for application to land or plants in any manner to any extent whatever: Provided, that the provisions of this section shall not prohibit any citizen or town or corporation organized solely for the purpose of supplying water to the inhabitants of such city or town from supplying water thereto for sprinkling streets and extinguishing fires or for household purposes." A violation of the above provision is made a misdemeanor, and each day of such improper application of the water shall be deemed a separate offense.[7]

All waters gathered by drainage improvement shall be the property of those from whose lands the same are taken by the drainage canal, and shall be prorated among the different land holders according to the cost of the improvement assessed against each one.[8]

"All persons on the margin, brink, neighborhood, or precinct of any stream of water shall have the right and power to place upon

the bank of said stream a wheel or other machine for the purpose of raising water to the level required for the purpose of irrigation, and the right of way shall not be refused by the owner of any tract of land upon which it is required, subject, of course, to the like regulations as required for ditches, and laid down in sections hereinbefore enumerated."[9]

§ 1774. **Division of the State and administrative officers.**—At the head of the Colorado system governing and controlling the distribution of water within the State is the State engineer. He is appointed by the Governor, and draws a salary of $3000 per annum. He has the general supervising control over the public waters of the State. He shall make, or cause to be made, careful measurements of the flow of the streams. He shall also collect all necessary data and information regarding the location, size, cost, and capacity of dams or reservoirs to be constructed and like data regarding the feasibility and economical construction of reservoirs on eligible sites. He shall also collect data and information regarding the snowfall in the mountains each season, for the purpose of predicting the probable flow of water in the streams of the State. He shall approve the designs and plats for the construction and repair of all dams or reservoir embankments which are built within the State which equal or exceed ten feet in vertical height. He is also given the supervision of the work of the division engineers and district water commissioners, and shall require them to report to him at suitable times their official acts, and require of them annual statements. He shall perform all duties which are imposed upon him by law and give his counsel and advice to the Governor when called upon, without extra pay, except actual traveling and other necessary expenses. He has the power, on request of any party interested and on payment of his per diem charges and reasonable expenses, to appoint a deputy or deputies, the pay of such deputies not to exceed six dollars per day for each day employed. He shall prepare and render to the Governor a full and true report regarding all matters devolving upon him by virtue of his office, said report to be delivered before the regular session of the legislature. He must collect all fees in accordance with the schedule and deposit

[9] 3 Colo. Stats., Ann., Morr. Ed., 1911, Sec. 3180; Laws, 1861, p. 68, Sec. 8.

the same with the State treasurer.[1] He is given no powers over the appropriation of waters, except in the matter of the construction of the necessary works; neither is he given any powers in the matter of the adjudication or determination of existing water rights.[2]

*Irrigation Division Engineers.*—For the better control of the waters, the State is divided into five divisions, as specified by the statutes, and over each division there is appointed by the Governor an irrigation division engineer, at a salary for Divisions 1 and 2 of $2500, and for Divisions 3, 4, and 5 of $1500 per annum. The offices of these division engineers are located within the respective divisions.[3] Any person desiring the appointment of irrigation division engineer may file with the State engineer a request for an examination as to his qualifications, and such an examination must be held whenever a vacancy exists. Such examination shall be for the purpose of determining the qualifications of applicants, and shall comprise: "First, questions on the measurement of water, which shall include tests in the actual measurements of water in the field on a basis of 30 per cent of the total; second, questions on the laws and customs relative to irrigation and water rights in Colorado, and including questions relating to local conditions of the division for

Co. v. Maxwell, 4 Colo. App. 447, 36 Pac. Rep. 556.

which the examination is being held, on a basis of 30 per cent of the total; third, questions on his experience and the extent of his practice in matters relating to the use of water in irrigation or for other beneficial purposes, on a basis of 40 per cent of the total." The State engineer shall examine and rate the examination papers of each applicant, and shall certify to the Governor a list of the names of all those receiving a rating of 70 per cent or over, and from this list the Governor shall make his appointment, subject to the confirmation of the senate.[4] The term for which he is appointed is four years, and he is to draw the salary named above and actual expenses.[5] He must take the oath of office and give a bond in the penal sum of $5000.[6]

The powers and duties of the division engineers are to have general supervision and control over the water commissioners of the several districts within his division. He shall, under the general supervision of the State engineer, execute the laws of the State relative to the distribution of water in accordance with the right of priority of appropriation, as established by judicial decrees. He has the authority to make such regulations to secure the equal and fair distribution of water as may, in his judgment, be needed in his division not inconsistent with the law. Any person who may deem himself injured by a decision of the division engineer may appeal to the State engineer, who is given the power to suspend, amend, or confirm the order complained of. He is given the power to call out the water commissioners of his district and to perform the regular duties of a water commissioner. He must devote his entire time to the work of his office. He shall require the water commissioners to make annual reports. He himself must make a complete tabulated report to the State engineer on or before the 15th of November of each year.[7] All division engineers shall be under the control and supervision of the State engineer, and may

have charges preferred against them for malfeasance in office, neglect of duty, or incompetency, and such charges may be heard and determined by the State engineer.[8]

*Water Commissioners.*—At present the State is still further divided into seventy water districts, whose boundaries are described by the statute.[9] There is one water commissioner for each of said districts, appointed by the Governor, selected by him from persons recommended by the county commissioners of the counties into which water districts may extend. Said commissioners must take an oath of office and give a bond, and are entitled to $5 per day for each day's service. The said commissioners shall not begin their work until they shall be called upon by two or more owners or managers or persons controlling ditches in their several districts by application in writing, stating that there is a necessity for their action; and they shall not continue such services after the necessity therefor shall cease. When so engaged in such service they shall devote their entire time to the same, and any wilful neglect of duty is punishable by a fine of $50.

It is made the duty of such water commissioners to divide the water in the natural streams of their district among the several ditches taking water from the same, according to the prior rights of each respectively; in whole or in part to shut and fasten the headgates of any ditch or ditches which, in the time of scarcity of water, shall not be entitled to water by reason of the priority of rights of others below them on the same stream. They are invested with the powers of constables, and may arrest any person violating his orders relative to the opening or shutting down of headgates or the using of water. They may appoint not to exceed two deputies, and

App. 236, 68 Pac. Rep. 134.

may employ assistance in times of necessity. They may make examinations of all ditches in their districts, and suppress all wasteful methods in the use or application of water. It is also made their duty to distribute the waters decreed and to protect the priority of rights of the respective owners of water rights for any beneficial purpose from and after their determination by the Court. "No water commissioner or irrigation official shall make any division or distribution of water between the users thereof from the same ditch or reservoir." [10]

All water commissioners shall make reports to the division engineers of their division.[11] Any water commissioner who fails to perform any of the duties imposed upon him shall be deemed guilty of a misdemeanor and punishable by a fine of not less than $50 nor more than $500.[12] He may also be removed from office for malfeasance, neglect of duty, or incompetency by the division engineer, subject to review by the State engineer.[13]

The above officials have jurisdiction only where the water is taken from the natural streams into the ditches and canals. It is made the duty of all companies furnishing water to appoint a superintendent, who shall measure to each person taking water from any ditch the *pro rata* share of water to which he is entitled.[14]

§ 1775. **The appropriation of water.**—Although the State of Colorado was the first to adopt the system of State control of the waters within its boundaries governing the distribution and use of the same, it never went to the extent that Wyoming and some of the other States have gone relative to its appropriation by requiring an appropriation to be made by an application to the State engineer. An appropriation is instituted by the commencement of the actual surveys for or the construction of the works necessary for the diversion of the water. It is finally consummated by the actual application of the water to some beneficial use or purpose within a reasonable time after the work was begun. Even the notice of appropriation is not required.[1]

It is, however, required that within sixty days after the commencement of such construction for an original appropriation, or the change of location or the enlargement of an old one, every person, association, or corporation must file a statement under oath in the office of the State engineer for each specific claim, in such form as shall seem sufficient and satisfactory to the State engineer, and accompanied by a map of the proposed works, and showing the point of location of the headgate of the proposed structure, the depth, width, grade, and length of each ditch, canal, or feeder proposed; the carrying capacity of each ditch, canal, or feeder in cubic feet per second; the time of the commencement of work on such structure, which time may be the date of the commencement of the surveys therefor, or of the commencement of actual construction;

White v. Farmers' High Line etc. Co., 22 Colo. 191, 43 Pac. Rep. 1028, 31 L. R. A. 828; aff'g. *Id.* 1 Colo. App. 1, 31 Pac. Rep. 345; Cache La Poudre etc. Co. v. Hawley, 43 Colo. 32, 95 Pac. Rep. 317.

1 For the appropriation of water, see Secs. 706-732.

The first appropriator has a prior right to the extent of his appropriation. Schilling v. Rominger, 4 Colo. 100.

"An appropriation is the intent to take, accompanied by some open physical demonstration of the intent, and for some valuable use." Larimer etc. Co. v. People, 8 Colo. 614, 9 Pac. Rep. 794.

"While the legislature can not prohibit the appropriation or diversion of unappropriated water for useful purposes, from natural streams upon the public domain, that body has power to regulate the manner of effecting such appropriation or diversion. Larimer etc. Co. v. People, *supra.*

The passive acceptance of water flowing into a canal does not constitute an appropriation. Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148.

the estimated cost of the project; and, in case of a filing of a reservoir site, the statement shall show the height of the proposed dam, the estimated cost, with the capacity in cubic feet and the surface area for each foot in depth of water stored up to and including the high-water mark.[2]

In case of change, enlargement, or extension, such statement shall show the matters required above, referring to the structure before such change or enlargement, and shall then state, also, the information required in the above items, second, third, fourth, and fifth, referring to the structure as enlarged, and in addition thereto state definitely the increase in capacity to be added. Whenever the surveys require long periods of time, temporary maps and statements may be made, and complete maps and statements may be filed later.[3]

Such statement must be signed and sworn to by the person or persons in whose behalf it is made; and in case of a corporation, by its duly authorized agent or officer. It is made the duty of the

[2] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3181, 3182; Rev. Stats., 1908, Secs. 3181, 3182, as amended Laws, 1911, Chap. 288, pp. 673, 674.

A provision similar to the above found in Laws, 1881, pp. 161, 162, was held unconstitutional for the reason that the title of the Act did not clearly express the subject matter. Lamar etc. Co. v. Amity etc. Co., 26 Colo. 370, 58 Pac. Rep. 600, 77 Am. St. Rep. 261. This provision was afterward re-enacted by Laws, 1887, p. 315; Laws, 1903, p. 290, Sec. 2, and Laws, 1911, as above indicated.

See, also, Rio Grande etc. Co. v. Prairie D. Co., 27 Colo. 225, 60 Pac. Rep. 726; Denver etc. Co. v. Dotson, 20 Colo. 304, 38 Pac. Rep. 322; Jarvis v. State Bank, 22 Colo. 309, 45 Pac. Rep. 505, 55 Am. St. Rep. 129; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; Blake v. Boye, 38 Colo. 55, 88 Pac. Rep. 470, 8 L. R. A., N. S., 418; O'Riley v. Noxson, 49 Colo. 362, 113 Pac. Rep. 486; Baldridge v. Leon Lake etc. Co., 20 Colo. App. 518, 80 Pac. Rep. 477; Beaver etc. Co. v. St. Vrain etc. Co., 6 Colo. App. 130, 40 Pac. Rep. 1066.

The filing of the requisite plats and notices of an appropriation, the commencement of construction, unless accompanied by a beneficial use of the water, constitutes merely an inchoate right, which is insufficient to bar a junior claimant if his beneficial use of the water antedates that of the one who began first. Conley v. Dyer, 43 Colo. 22, 95 Pac. Rep. 304.

The joint filing of claim to water and a joint building of a ditch to convey water, but a separate application of the water to individual property do not constitute a tenancy in common. City of Telluride v. Davis, 33 Colo. 355, 80 Pac. Rep. 1051, 108 Am. St. Rep. 101.

[3] 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3183; Rev. Stats., 1908, Sec. 3183, as amended, Laws, 1911, Chap. 228, p. 675.

State engineer to examine the map and statement, and if he shall find the data therein contained to be sufficient and satisfactory, he shall endorse on each sheet of the filing "Accepted for filing in the office of the State engineer of Colorado, on the ——— day of ———," and attach thereto his signature and seal. He shall then cause to be prepared a reproduction of each sheet of the filing so endorsed and shall forward such prints to the claimant, who shall cause a copy of the same to be filed in the office of the county recorder of the county in which the headgate of the proposed structure or in which the proposed reservoir shall lie.[4]

The appropriation of water in Colorado is finally consummated by the actual application of the water to the beneficial use or purpose for which it was intended.[5]

**§ 1776. The standard of measurement.**—The old standard of measurement of water was the miner's inch, and by an old statute it was provided: "Every inch shall be considered equal to an inch square orifice under a five-inch pressure, and a five-inch pressure shall be from the top of the orifice of the box put into the banks of the ditch, to the surface of the water; said boxes, or any slot or aperture through which such water may be measured, shall in all cases be six inches perpendicular, inside measurement, except boxes delivering less than twelve inches, which may be square, with or without slides; all slides for the same shall move horizontally, and not otherwise; and said box put into the banks of ditch shall have a descending grade from the water in ditch of not less than one-eighth of an inch to the foot."[1]

By the Act of 1881, providing for the adjudication of water rights, it was provided that the decrees should describe "such

[4] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3185-3187; Rev. Stats., 1908, Secs. 3185-3187, as amended, Laws, 1911, Chap. 228, pp. 675, 676.

Note the difference between the miner's inch in California, where it is measured under a four-inch pressure. Sec. 1730.

amount of water by cubic feet per second of time, if evidence shall show sufficient data to ascertain such cubic feet," etc.[2]

By the Act of 1889, providing for the duties of the State engineer, it is provided: "The State engineer shall use in all his calculations, measurements, records, and reports the cubic foot per second as the unit of measurement of flowing water, and the cubic foot as to unit of measurement of volume."[3]

By the Act of 1903, in the statements of construction of works, "the carrying capacity of each ditch, canal, or feeder in cubic feet per second" must be set forth by the appropriator.[4]

**§ 1777. Ditches and canals—Measuring devices.**—The owner or owners of any ditch for irrigation or other purposes shall carefully maintain the embankments thereof, so that the waters of such ditch may not flood or damage the premises of others, and shall make a tail ditch, so as to return the water in such ditch with as little waste as possible into the stream from which it was taken. Vested rights must not be impaired. The owners of ditches must maintain bridges where they cross highways; and if not bridged within three days it is made the duty of the supervisor of the road district to construct such bridges and call upon the owners to pay the expenses for the same. If the owners refuse to pay, suit may be brought by the supervisor in the justice of the peace court for such claim, and the sum of $10 in addition thereto, as damages arising from the delay of such owners.[1] It is also provided that ditch companies must keep highways open for safe and convenient travel.[2] "The owner of any irrigating or mill ditch shall carefully maintain

[2] 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3284; Rev. Stats., 1908, Sec. 3284; Laws, 1881, p. 144, Sec. 4.

Highline Canal Co. v. Westlake, 23 Colo. 26.

and keep the embankments thereof in good repair and prevent the water from wasting."[3]

"During the summer season it shall not be lawful for any person or persons to run through his or their irrigating ditch any greater quantity of water than is absolutely necessary for irrigating his or their said land, and for domestic and stock purposes, it being the intent and meaning of this section to prevent the wasting and useless discharge and running away of water." The violation of this provision is made punishable in a sum of not less than $100.[4]

Ditches and canals running through cities of the first class must be covered, and the heads must be latticed, so that persons or animals can not accidentally enter therein. For the failure to cover or lattice, the owner shall forfeit the sum of $50 for each and every day such failure shall continue.[5] Such penalty to be recovered in a civil action; said action not to be a bar to an action for special damages by any person who shall have suffered such damages.

Good and sufficient headgates must be maintained, and "owners of all ditches shall be liable for all damages resulting from their neglect or refusal to comply" with such provisions.[6] Headgates and wastegates must be constructed and maintained by the owners, and in case of failure or neglect, or refusal to do so, after five days' notice has been given by the water commissioner or the State engineer, then they must be constructed by the commissioner of the district, and the expenses therefor may be collected in the same manner as is provided in case of failure to build and maintain bridges.[7]

Boglino v. Giorgetta, 20 Colo. App. 338, 78 Pac. Rep. 612.

Suitable locks and fastenings must also be provided by the owners; if not furnished by the owners the commissioner may furnish them and collect in the same manner the expenses therefor.[8]

Suitable and proper measuring flumes, weirs, and devices for measuring water must be constructed and maintained by the owners, and in the manner and form as prescribed by the State engineer. If not so constructed, the officer in charge may refuse the delivery of water until they are constructed. The owners are also made liable for all damages resulting from their neglect or refusal to comply with the above provision; and any owner who shall divert water from the stream into any such works contrary to the orders of the State engineer, division engineer, or water commissioner shall be deemed guilty of a misdemeanor and be punishable by a fine not to exceed $500, and each day of violation shall be deemed a separate offense. The owners of any ditch, canal, or reservoir transferring water from one natural stream to another, or from a reservoir, ditch, or flume to a stream, must also construct proper measuring flumes or weirs with self-registering devices, if required by the State engineer, for the proper and accurate determination of the amount and flow of water turned into, carried through, and diverted out of the natural stream. The State engineer or division engineer shall rate the measuring flumes and weirs, and the original notes of such rating, together with a complete table compiled therefrom, shall be filed as a part of the records of the State engineer.[9] All headgates, measuring weirs, flumes, and devices are under the supervision at all times of the State engineer, the division engineer of the water division, and the water commissioner of the water district.[10]

The owners or persons in control of any canal or ditch used for irrigating purposes shall maintain the same in good order and re-

pair, ready to receive water by April 15 in each year, and shall construct the necessary outlets in the banks for the proper delivery of the water to the persons entitled thereto.[11]

**§ 1778. Ditches and canals—Rights of way therefor.**—Under the early statute of the Territory of 1861,[1] it was held by the Territorial Supreme Court that irrigation being considered a climatic necessity, makes the right of ditch transit, which is essential to its enjoyment, analogous to the case of ways of necessity, and that rights of way for such ditches might be acquired without condemnation or compensation. In other words, one acquiring a tract of real property acquired the title thereto subject to all rights of way necessary for this purpose.[2] But the later Territorial cases questioned this rule as being in violation of the Fourteenth Amendment of the Constitution of the United States.[3] Since the adoption of the State constitution it is held that rights of way for these purposes can not be acquired against the wishes of the land owner except upon condemnation proceedings, and upon the payment of just compensation, and thus making the rule in these cases uniform with the rule in other cases where private property is sought for public uses.[4]

Persons or corporations are entitled to rights of way through

11 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3255; Rev. Stats., 1908, Sec. 3255; Laws, 1887, p. 305, Sec. 2.

3 Crisman v. Heiderer, 5 Colo. 589, where it was held that the rule in the case of Yunker v. Nichols should be confined "to the narrowest limits."

For the acquisition of rights of way, see Secs. 972-993.

4 See the cases cited in the following notes.

The irrigation laws of the State do not authorize a person to injure the land of others in constructing his ditches without a prior purchase or condemnation, and the payment of compensation. Nippel v. Forker, 9 Colo. App. 106, 47 Pac. Rep. 766; aff'd in 26 Colo. 74, 56 Pac. Rep. 577.

See, also, Blake v. Boye, 38 Colo. 55, 88 Pac. Rep. 470, 8 L. R. A., N. S., 418; Lamar Canal Co. v. Amity etc. Co., 26 Colo. 370, 58 Pac. Rep. 600, 77 Am. St. Rep. 261; Great Plains etc. Co. v. Lamar etc. Co., 31 Colo. 96, 71 Pac. Rep. 1119.

A right of way so acquired is merely an easement. Smith etc. Co. v. Colorado etc. Co., 34 Colo. 485, 82 Pac. Rep. 940, 3 L. R. A., N. S., 1148.

farms and tracts of land for the purpose of constructing ditches, canals, or other works. Such a right of way shall extend only to a ditch, dike, or cutting sufficient for the purpose required. Upon the refusal of the owners of tracts of land through which it is proposed to run a ditch to allow a passage through their property the person or persons desiring to open such ditch may proceed to condemn and take the right of way therefor under the provisions of the statutes concerning eminent domain.[5]

No tract or parcel of improved or occupied land shall, without the written consent of the owner, be subjected to the burden of two or more irrigating ditches, when the same object can feasibly and practically be attained by one ditch. The shortest route must be taken upon which the ditch can be constructed with uniform, or nearly uniform, grade, and discharge the water at a point where it can be conveyed to the lands of the persons constructing such ditch. No person having constructed a ditch shall prohibit or prevent any other person from enlarging or using the same upon the payment of a reasonable proportion of the cost of construction.[6]

In case the channel of any natural stream becomes changed from any cause, so as to prevent any ditch, canal, feeder, or reservoir from receiving the proper inflow of water to which it may be entitled, the owner thereof has the right to extend the head of such ditch to such distance up the stream as may be necessary to receive such flow, and for that purpose the owner may maintain proceedings in condemnation: Provided, however, that no such extension shall interfere with the complete use or enjoyment of any ditch, canal or feeder.[7]

"This Act shall apply to and affect only ditches, canals, or feeders used for carrying water for the purpose of irrigation, and for no other purpose whatever."[8]

A right of way is given to conduct water through the channels of the natural streams, and of reclaiming an equivalent amount below, with due allowance made for seepage and evaporation, the amount to be determined by the State engineer or the commissioner of the district, under his directions.[9]

Whenever the owner or owners of any parcel or parcels of land desire to construct a drain for the purpose of carrying off surplus water, a right of way for the same may be acquired by condemnation proceedings.[10]

By the Act of April 23, 1909,[11] amending the Act of April 12, 1905,[12] it is provided that the State board of land commissioners may grant the right of way, upon such terms as the board shall de-

termine, for any ditch or reservoir, and all conveyances of State lands thereafter made shall contain a reservation of such rights of way.

**§ 1779. Ditches and canals—Special proceedings to change point of diversion.**—As the rights of a certain ditch or canal taking water from the natural streams in Colorado are finally determined by a decree of the Court under the statutory proceedings therefor,[1] and as in that decree the point of diversion is designated and fixed, any change of that point must also be made by a decree of the Court in proceedings provided specially for that purpose.[2]

By the Act approved March 27, 1903, as amended,[3] every ditch owner desirous of changing in whole or in part the point or points of diversion from any of the streams of the State shall present a petition to the District Court from which the original decree was issued, praying that the change be granted. The practice and procedure, save as in the Act provided, shall be the same as if the petition were for an original statutory decree. The Court shall require proof that all parties who may be affected by the change have been duly notified in the proceedings, and shall hear evidence and determine whether such change will injuriously affect the vested rights of others. A decree shall be entered permitting the change as prayed for, unless it appear that such change will injuriously affect the vested rights of others; and if such injury appear, the Court shall decree the change only upon such terms and conditions as may be necessary to prevent such injurious effect, or to protect the parties affected, or, if impossible to do so, may deny said application. Several applications may be consolidated in one petition. Upon the granting of a decree the petitioner shall cause to be prepared certified copies of the same, and shall cause filings thereof with the county clerk of the county in which the new point of diversion is or is to be located, and also in the office of the State engineer. The State engineer shall immediately issue notices to the water commissioners in the water districts affected, and to the division engineer or superintendents in said division. In case the change

2 For changes which may be made, see Secs. 856-873.

3 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3226-3231; Rev. Stats., 1908, Secs. 3226-3231; Laws, 1903, Chap. 124, p. 278, Secs. 1-6.

is from one district to another, the petitioner shall file a copy of the decree in the court having jurisdiction of the statutory water adjudications in the district of the new point of diversion, and thereupon, on motion, the court in which the copy is so filed shall order a record of the decree of change, and the original decree theretofore entered shall accordingly stand modified as to the matters contained in said decree of change.

Rearguments and reviews of and appeals from decrees so entered may be had as in the case of statutory water adjudications: Provided, however, they be prayed within thirty days from the time of entering the decree complained of.[4]

If in making such change it is found that any vested right will be interfered with, further proceedings must be had in condemnation.[5]

**§ 1780. Sale and conveyance of water rights.**—"In the conveyance of water rights hereafter made in this State, in all cases except where the ownership of stock in ditch companies or other companies constitute the ownership of a water right, the same formalities shall be observed and complied with as in the conveyance of real estate." [1]

**§ 1781. Reservoirs and reservoir rights.**—Reservoirs may be constructed and water stored therein. Lands may be condemned for the purpose of such reservoirs and for the ditches for carrying such water to and from such reservoirs.[1] No reservoir of a capacity of more than 75,000,000 cubic feet of water, or having a dam or embankment in excess of ten feet in vertical height, and covering an area of more than twenty acres, shall hereafter be constructed in the State, unless the plans and specifications of the same shall be first approved by the State engineer; and the State engineer shall act as the consulting engineer during the construction thereof, and shall have the authority to require the material used and the work of construction to be done to his satisfaction; "and no work shall be deemed complete under the provisions of this Act until the State engineer shall give to the owners of such structure a written statement of the work of construction and the full completion thereof, together with his acceptance of the same, which statement shall specify the dimensions and capacity of such reservoir or reservoirs." [2]

2 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3205; Rev. Stats., 1908, Sec. 3205.

By another section it is provided

The cost of inspection and supervision must be paid by the owners. The State engineer shall annually determine the amount of water which it is safe to impound in the several reservoirs within the State, and it is made unlawful to store water in any reservoir in excess of the amount so determined to be safe. It is made the duty of the water commissioner to draw off the excess water, and he may employ force to do so if necessary.[3]

Upon complaint being made to the State engineer by three or more persons residing or having property in the neighborhood of a reservoir that their homes or property would be in danger of destruction or damage in the event of a flood occurring on the account of the breaking of the embankment of such reservoir, that such reservoir is in an unsafe condition, or that it is being filled with water to such an extent as to render it unsafe, it is made the duty of the State engineer to forthwith examine such reservoir and determine the amount of water it is safe to impound therein. If the reservoir is found unsafe, the water must be withdrawn to such an extent as will, in the judgment of the engineer, render the same safe. The persons calling upon the State engineer must advance the mileage expenses to the State engineer, but if the reservoir is found unsafe, the owners shall be liable for all expenses incurred in such examination. An appeal may be had from the decision of the State engineer to the County or District Court wherein the reservoir is located, and the Court shall hear and determine the matter summarily at the earliest practical time without written pleadings or the aid of a jury. Appeal may also be had to the Supreme Court, but the judgment of the State engineer shall control until the final determination of the cause.[4]

Any reservoir company failing or refusing, after ten days' notice in writing having been given, to obey the directions of the State engineer as to the construction or filing of any reservoir, shall be subject to a fine of not less than $50 for each day's continuance

that the State engineer shall approve the designs and plans for the construction and repair of all dams or reservoir embankments, which equal or exceed ten feet in vertical height. 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3323; Rev. Stats., 1908, Sec. 3323; Laws, 1889, p. 372, Sec. 3.

[3] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3206-3208; Rev. Stats., 1908, Secs. 3206-3208; Laws, 1899, p. 314, Secs. 2-4.

[4] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3209-3212; Rev. Stats., 1908, Secs. 3209-3212.

after time of notice has expired, such fine to be recovered in a civil action in the name of the people.[5]

By a separate Act, approved April 11, 1903,[6] an Act to promote irrigation of arid lands within the State by water obtained from wells or sources other than the flow from natural sources, it is provided for the construction of small reservoirs: It is made the duty of the county surveyor of each county upon the request of the owner of ten or more acres of arid land to locate and survey an available site for a reservoir upon such land, such reservoir to be used for the storage of water to irrigate the land contiguous thereto, and such reservoir to be of a capacity to hold sufficient water to properly irrigate not less than ten acres of such land. Within thirty days after such location the owner of such land shall begin the construction and work continuously thereon until completion, and the construction of the outlet of such reservoir shall be done under the direction of the county surveyor. Upon completion it is made the duty of the county surveyor to file with the board of county commissioners a map or plat of the land upon which such reservoir is located, with a full description thereof. It is made the duty of the board of county commissioners, within sixty days thereafter, to approve the same by resolution spread upon the records of such board. It is made the duty of the owner or his tenant to keep such reservoir in good repair and in a safe condition. It is also made the duty of the county surveyor to annually inspect such reservoirs, and to order the repairs necessary, the expenses for such inspection to be paid by the owners. County surveyors and members of the board of county commissioners shall not be liable for any act done by them in pursuance of the provisions of the Act.

Upon the subject of the distribution and use of waters stored in reservoirs, it is provided that: The owners of any reservoir may conduct the water therefrom into and along any of the natural streams, but not so as to raise the water above ordinary high-water mark, and may take out the same at any point desired, without regard to the prior rights of others to the water from such stream; but due allowance must be made for evaporation and seepage, the

[5] 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3214; Rev. Stats., 1908, Sec. 3214.

[6] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3215-3221; Rev. Stats., 1908, Secs. 3215-3221; Laws, 1903, Chap. 122, p. 262, Secs. 1-7.

amount to be determined by the water commissioners of the district, or, if there are no such commissioners, then by the county commissioners.[7]

When the rights of others are not injured thereby, it shall be lawful for the owner of a reservoir to deliver stored water into a ditch entitled to water or into the public stream to supply appropriations, and take in exchange therefor an equal amount of water, less reasonable deduction for loss, if there be any, to be determined by the State engineer. The person or company desiring such exchange must construct and maintain, under the direction of the State engineer, measuring flumes or weirs and self-registering devices.[8]

The owners or possessors of reservoirs shall not have the right to impound any water in such reservoirs during the time that such water is required in senior ditches for immediate use for direct irrigation or for storage in reservoirs holding senior rights. A gauge rod, marked in feet and tenths and one-hundredths of a foot, shall be permanently fixed and maintained at the outlets of all reservoirs, under the supervision of the State engineer, and if not so maintained the owner shall not be entitled to impound any water whatever until these provisions are complied with.[9]

The owner or owners of any reservoir situate upon or in the bed of any natural stream or through which any natural stream flows, shall, at their expense, cause a complete survey of the contour lines of said reservoir to be made, which survey may be approved by the State engineer, or made under his direction. There shall also be

9 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3251; Rev. Stats., 1908, Sec. 3251; as amended, Laws, 1911, Chap. 153, p. 465, Sec. 4.

"A senior reservoir is entitled to but one filling during the same season on the same priority before junior reservoirs are filled once." Windsor Res. etc. Co. v. Lake Supply etc. Co., 44 Colo. 214, 98 Pac. Rep. 729.

See, also, for reservoirs and reservoir rights, Secs. 837-846.

prepared a table, to be filed in triplicate with and approved by the State engineer, showing the capacity of said reservoir, a copy of which table shall be furnished to the division engineer and the water commissioner of the district. Gauge rods must also be constructed at the outlet of such reservoir, also suitable and permanent measuring devices, all under the direction of the State engineer. Upon the failure and neglect of the owner to comply with these provisions, it is made the duty of the State engineer or the division engineer to refuse to allow any water whatsoever to be taken into or diverted from said reservoir. The State engineer and division engineer must investigate any complaints received as to the violation of the above provisions.[10]

**§ 1782. State canals and reservoirs and the control thereof.**—By the Act of 1889 [1] it is provided that, for the purpose of reclaiming, by irrigation, State and other lands, and for the purpose of furnishing work for the convicts confined in the State penitentiary, the board of commissioners of the State penitentiary is authorized to locate, acquire, and construct, in the name of and for the use of the State of Colorado, ditches, canals, reservoirs, and feeders for irrigating and domestic purposes, and for that purpose may use convict labor of persons confined in the State pentitentiary.[2]

It is made the duty of the State engineer to survey and locate such works. Power is given the board to condemn lands for rights of way. The title to all works shall vest in the State, and the proceeds thereof shall be paid into the State treasury. When any part of such works is completed, the said board may lease water rights upon such terms and under such rules and regulations as may be adopted by the board and approved by the Governor of the State. For the purpose of aiding in the construction, subscriptions may be received from persons owning lands along the line of the proposed ditch, and certificates issued therefor, to draw interest at the rate of 7 per cent per annum, and both principal and interest to be payable in water.[3]

2 *In re* Canal Certificates, 19 Colo. 64, 34 Pac. Rep. 274.

3 *In re* Canal Certificates, 19 Colo. 64, 34 Pac. Rep. 274.

A supplemental Act was subsequently passed relating to the management and control of the first canal constructed, to be known as "State Canal No. 1," and placing the management and control of such canal in the State board of land commissioners.[4] Similar Acts were afterward passed relative to other State works constructed in the same manner and by the same means. By the Act of 1891 [5] the "Mesa County State Ditch" was provided for and constructed thereunder, and the Governor authorized to appoint a competent person to manage and superintend the said ditch. By the Act of 1901 [6] "State Canal No. 3" was authorized.[7]

By a number of independent Acts other separate works were authorized to be constructed at the expense of the State, and which, when constructed, were to be the property of the State. By the Act of 1889 [8] feeders from the Grand, Laramie, and North Platte systems into and through the tributaries of the South Platte and Arkansas systems were authorized for the purpose of supplying deficiencies of water for appropriations theretofore made, the said works to be the property of the State. And the State engineer was authorized to determine, regulate, and provide for the delivery of such waters to such ditches, canals, and reservoirs, "according to their several appropriations, decrees of court, capacities, and necessities."

By the Act of 1889 [9] the "Coal Creek Reservoir" was authorized and constructed, and the State engineer authorized to distribute the water to those entitled thereto. By the Act of 1891 [10] the Apishapa

[4] See 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3505-3513; Rev. Stats., 1908, Secs. 3505-3513; Laws, 1893, p. 441, Secs. 1-15.

The Act of 1893 was held partly constitutional and partly not. *In re* Certificates, 19 Colo. 64, 34 Pac. Rep. 274.

Creek Reservoir was authorized and a board of control created to sell or lease the waters as would bring the most revenue to the State. By another Act of 1891 [11] the Hardscrabble Creek Reservoir was authorized, and a board created for the disposition of its waters. Also, by another Act of 1891 [12] the Saguache Creek Reservoir was authorized and a board created for its management and control and for the distribution of its waters. By another Act of 1891 [13] the Monument Creek Reservoir was authorized and a board created to manage and control the same and to distribute its waters. By still another Act of 1891 [14] the Chaffee County Reservoir was authorized and a board created for its management, control, and the distribution of its waters.

Other reservoirs had been constructed by previous Acts, and their management and control, until further disposition, was left to the State board of land commissioners. By the Act of 1897 [15] the Boss Lake Reservoir, in Chaffee County, was turned over to the county commissioners of that county for management and control and for the distribution of its waters, the said waters to be distributed *pro rata,* without reference to dates of priorities and without expense to the consumers thereof.

It was provided in all of such Acts that all reservoirs and other works were to be and remain the property of the State. And, until otherwise directed by law, the State board of land commissioners were directed to regulate the distribution of their waters, "and to charge and collect rental for the carriage of water therein." [16]

By the Act approved April 7, 1899,[17] it was provided for the leasing and distribution of the waters stored or to be stored in State reservoirs under the charge and control of the county commission-

ers of any county wherein such reservoirs are situated, without expense to the State, the said waters to be distributed by the water commissioner *pro rata* without reference to priority of rights and without expense to the consumers thereof; the counties in which said reservoirs are situated to assume and shall be held responsible for any damages resulting from breakage of dams or water discharges therefrom. The provisions of the Act not to apply to any State reservoir constructed primarily for the purpose of irrigating State lands.

**§ 1783. The sale of State land to secure irrigation on other lands.**—By the Act approved April 12, 1905,[1] it was provided that for the purpose of furnishing irrigation for State lands the State board of land commissioners is authorized to sell at public sale, at not less than the appraised value thereof, and in no case less than $3.50 per acre, any tract of land belonging to the State: Provided, that not more than one-half section of land shall be sold, and in alternate half-sections, to any responsible person or persons, on condition that they construct an irrigating ditch in such locality and of sufficient capacity to furnish water for the entire tract. And in no case shall the title of any of said lands pass from the State until the ditch shall have been completed and accepted by the board.

Also, by the supplemental Act of June 2, 1911,[2] for the purpose of furnishing water and securing water rights for State lands, the State board of land commissioners is authorized to enter into contracts with any person, corporation, or irrigation district, providing for such irrigation. All assessments or other payments for the cost of so irrigating such land shall be paid by the lessees or purchasers thereof. And the board may agree that whenever any State land for which irrigation is provided is leased or sold, the lessee or purchaser, as the case may be, shall pay the agreed value therefor, and the board shall have full power to secure such person, corporation, or district so furnishing water for irrigation of State lands, the payment of the cost of the water rights upon such lands being leased or sold by the lessee or purchaser thereof.

2 4 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 5218-C; Laws, 1911, Chap. 86, p. 211, Secs. 1-3.

**§ 1784. The distribution and use of water.**—Under the Colorado system the distribution of water between the main ditches, canals, or reservoirs which take the water direct from the natural streams, comes directly under the supervision of the water commissioners of the respective districts,[1] under the supervision of the division engineers,[2] who in turn are under the supervision of the State engineer.[3] The division of the water from the ditches to the consumers comes under the supervision of a superintendent appointed or elected for that purpose.[4]

There are a number of miscellaneous provisions relative to the distribution of water which we will set forth in this section.

If at any time any ditch or reservoir from which water is or shall be drawn for irrigation shall not be entitled to a full supply of water from the natural stream which supplies the same, the water actually received into and carried by such ditch, or held in such reservoir, shall be divided among all the consumers of water from such ditch or reservoir, to each his share *pro rata*, according to the amount he, she, or they shall then be entitled to, so that all the owners shall suffer from the deficiency each in proportion to the amount of water which he, she, or they should have received in case no such deficiency of water had occurred.[5]

Whenever any person or company shall divert water from one public stream and turn it into another public stream, such person or company may take out the same amount of water again, less reasonable deduction for seepage and evaporation, to be determined by the State engineer. For this purpose measuring flumes or weirs and self-registering devices must be maintained at the expense of the owner and under the direction of the State engineer. The water commissioner of the district must keep a record of the amount of water so turned into his district from any other district.[6]

Upon the subject of rotation, it is made lawful for the owners of ditches and water rights taking water from the same stream to exchange with and to loan to each other, for a limited time, the water to which each may be entitled, for the purpose of saving crops or of using the water in a more economical manner: Provided, that the owner or owners making such loan or exchange shall give notice in writing of the same, whereupon the water commissioner shall recognize the same in his distribution of water.[7]

It is made the duty of every person to see that he receives no more water than he is entitled to; and upon finding that he is receiving more water than he is entitled to, to take steps to prevent the same; and if he knowingly permits such extra water to come to his land, and does not immediately notify the owner of the ditch, canal, or reservoir, or take steps to prevent its further flowing upon his land, he shall be liable to any person who may be injured by such extra

appropriation of water for the actual damages sustained, with costs and reasonable attorney's fees, to be fixed by the Court and to be taxed with the costs.[8]

The owners of ditches and canals must prevent the water from being wasted, and from running excess water during the summer season.[9]

**§ 1785. Ditch, reservoir, flume, and pipe line corporations—Organization.**—There are special provisions in the Colorado statutes for the incorporation and government of ditch, canal, flume, and pipe line corporations.

When any three or more persons associate, under the provisions of the chapter of the Colorado statutes relative to corporations, for the purpose of constructing a ditch, reservoir, pipe line, or any part thereof, for the purpose of conveying water from any natural or artificial stream, channel, or source whatever, to any mines, mills, or lands, or storing the same, they shall, in their certificate, in addition to the matters required in Section 2 of this chapter, specify as follows, viz.: "The stream, channel, or source from which the water is to be taken, the point or place at or near which the water is to be taken out, the location, as near as may be, of any reservoir intended to be constructed, the line, as near as may be, of any ditch or pipe line intended to be constructed, and the use to which the water is intended to be applied."[1]

When any corporation shall organize for the purpose of constructing a flume, in addition to the matters required in Section 2 of the Act, the certificate shall specify as follows: "The place of beginning, the terminus, and the route, so near as may be, and the purpose for which such flume is intended," etc.[2]

[8] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3260, 3261; Rev. Stats., 1908, Secs. 3260, 3261; Laws, 1887, p. 312, Secs. 1, 2.

[1] 2 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 988; Rev. Stats., 1908, Sec. 988; Laws, 1891, p. 97, Sec. 1.

The stock in such companies is personal property and subject to execution and sale. Struby-Estabrook Mer. Co. v. Davis, 18 Colo. 93, 31 Pac. Rep. 495, 36 Am. St. Rep. 266.

[2] 2 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 998; Rev. Stats., 1908, Sec. 998; Laws, 1864, p. 59, Sec. 35, as amended.

When any corporation shall organize for the purpose of constructing a pipe line for the conveyance of gas, water, or oil, they shall in their certificate, in addition to the matters required in Section 2 of the Act, specify as follows: "The places from and to which it is intended to construct the proposed line or lines," etc.[3]

Companies so organized holding ditches or canals which derive their supply of water for their respective ditches from the same headgate or gates, or from the same source or sources of supply, may consolidate their interests and unite their respective companies under one name and management by filing a certificate of that fact in the office of the Secretary of State, and in the office of the recorder of the respective counties in which such ditches or canals are situated, which certificates shall be signed by the presidents of the companies so uniting, with the common seals of the companies affixed thereto, and shall set forth the fact of such union of interests and give the name of the new company thus formed.[4]

When the term of years for which any incorporation has been, or may hereafter be, incorporated as a ditch company for the purpose of carrying water for irrigation purposes, or as a reservoir company for the purpose of storage of water for irrigation purposes, has expired, or is about to expire by lawful limitation, and such corporation has not been administered upon as an expired corporation or gone into liquidation, it may have its term of incorporation extended and continued, the same as if originally incorporated, as provided as follows: The stockholders may vote upon the question of extending the life of such corporation for another twenty years, or less, by first giving notice of such intention, by publication, for two successive weeks, in the newspaper printed nearest the place where the principal operations of such corporation are carried on, such notice to be signed by stockholders owning at least 10 per cent of the capital stock. A majority of the stock must be represented, and, in order to renew, a majority of the votes cast must be in favor of the same.[5]

**§ 1786. Ditch, etc., corporations—Duties, rights, and powers.**—Any company formed for such purposes shall, within ninety days from the date of their certificate, commence work on such ditch or other works, and shall prosecute the same with due diligence until the same is completed, and the time of the completion of such works shall not extend beyond a period of two years from the time work was commenced as aforesaid, and any company failing to so commence work within ninety days, or failing to complete the same within said two years, shall forfeit all right to the water so claimed by any other company; the time for the completion of any flume shall not extend beyond a period of four years; provided, this section shall not apply to any ditch or flume for mining or other purposes constructed through and upon any grounds owned by the corporation; and, further, that any company formed to construct a ditch for domestic, agricultural, irrigating, milling, and manufacturing purposes, or any or either thereof, shall have three years from the time of the commencement of work within which to complete the same, but no longer.[1]

Such a company shall have the right of way over the line named in the certificate, and shall also have the right to run water from the stream or water source through its works, and to store the same in any reservoir of the company when not needed for immediate use: Provided, that the line proposed shall not interfere with any ditch, pipe line, or reservoir having prior rights, except the right to cross by pipe or flume; nor shall the water of any stream or other water source be diverted from its original channel to the detriment of any person having a prior right thereto, but this shall not be construed to prevent the appropriation and use of any water not theretofore utilized and applied to beneficial uses.[2] Flume com-

1 2 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 989; Rev. Stats., 1908, Sec. 989; Laws, 1864, p. 61, Sec. 42, as amended.

See Water Supply etc. Co. v. Tenney, 24 Colo. 344, 51 Pac. Rep. 505.

A stockholder in a mutual ditch corporation has the right to change the point of diversion, so long as the rights of others are not injured thereby. Wadsworth D. Co. v. Brown, 39 Colo. 57, 88 Pac. Rep. 1060.

For proceedings to change point of diversion, see Sec. 1779.

For changes which may be made, see Secs. 856-873.

2 2 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 990; Rev. Stats., 1908, Sec. 990; Laws, 1891, p. 98, Sec. 2, as amended from Laws, 1864, p. 58, Sec. 32; Coffin v. Left Hand D. Co., 6 Colo. 443; Central City etc. Co. v. Kimber, 1 Colo. 475.

panies shall have the right of way over the line proposed in their certificate for such flume, provided it does not conflict with the rights of any former fluming, ditching, or other company.[3] Pipe line companies "shall have the right of way over the line or lines named in the certificate, and shall also have the right to convey gas, water, or oil by said lines as stated in such certificate through the lands of the State of Colorado, and lands of individuals, with the right to erect thereon pump stations, storage tanks, and other buildings necessary for such business, if it shall be unable to agree with the individuals owning any of such lands for the purchase of any real estate required," such corporation may acquire such title by condemnation in the manner provided by law.[4]

Any such corporation, with its capital stock fully subscribed and paid up, and when it shall have no income sufficient to keep its works in good repair, shall have the power to levy an assessment on the capital stock thereof, payable in money or labor or both. But no such assessment shall be levied unless the question shall be first submitted to the stockholders, and a majority of the same voting in favor thereof.[5]

Every ditch company is required to keep its ditch in good repair, so that the water shall not be allowed to escape from the same to the injury of any mining claim, road, ditch, or other property; and whenever it is necessary to convey any ditch over any lode mining claim it must be flumed so far as necessary to protect such claim from the water of the ditch.[6] Every ditch company must also have its ditch in such repair that it is ready to receive the water by

April 15 of each year, and construct the necessary outlets for the delivery of water.[7]

It is also made the duty of those owning or controlling such canals or ditches to appoint a superintendent, whose duty it shall be to measure the water from such canal or ditch through the outlets to those entitled thereto according to his or her *pro rata* share.[8]

It is made a misdemeanor for any person to wilfully or maliciously damage or interfere with any ditch or other works or personal property of any such company, punishable by a fine of not to exceed $500 or by imprisonment, or both.[9]

**§ 1787. Ditch, etc., companies—When compelled to furnish water.**—"Any company constructing a ditch under the provisions of this Act [1] shall furnish water to the class of persons using the water in the way named in the certificate, in the way the water is designed to be used, whether miners, millmen, farmers, or for domestic use, whenever they shall have water in their ditch unsold, and shall at all times give preference to use of the water in said ditch to the class named in the certificate; the rates at which water shall be furnished to be fixed by the county commissioners, as soon as such ditch shall be completed and prepared to furnish water." [2]

A provision in a water contract that

Any person or persons, acting jointly or severally, who shall have purchased and used water for irrigation for lands occupied by him, her, or them, from any ditch or reservoir, and shall not have ceased to do so for the purpose or with the intent to procure water from some other source of supply, shall have a right to continue to purchase water to the same amount on paying or tendering the price thereof fixed by the county commissioners,[3] or if no price shall have been fixed by them, the price at which the owners of such ditch or reservoir may be then selling water, or did sell water, during the last preceding season. This section does not apply to the case of those who may have taken water as stockholders or shareholders after they have sold or forfeited their shares of stock, unless they shall have retained a right by contract, agreement, or understanding, and use between themselves and the owners of such ditch, and not then to the injury of other purchasers in the same ditch.[4]

It is also made a misdemeanor for any person owning or controlling, or claiming to own or control, any ditch, canal, or reservoir who shall, after demand in writing, made upon him for the supply or delivery of water for irrigation or other beneficial uses, and after the tender of the lawful rate of compensation therefor in lawful

upon refusal of the carrier to furnish water, the consumer may take it himself, is void. White v. Farmers' etc. Co., 22 Colo. 191, 43 Pac. Rep. 1028, 31 L. R. A. 828.

money, to refuse to furnish or carry and deliver from such works any water so applied for, which water may be, by use of reasonable diligence in that behalf, and within the carrying or storage capacity of such ditch, canal, or reservoir, be lawfully furnished and delivered without infringement upon prior rights, and punishable by a fine of not less than $100 nor more than $5000, or imprisonment for not less than three months nor more than one year, or both.[5]

When any corporation, in defiance or by attempted evasion of the provisions of the Act, shall, after tender of compensation, refuse to deliver water to any person lawfully entitled to apply therefor, it shall be the duty of the attorney-general, upon request of the county commissioners of the proper county, or upon his otherwise receiving due notice thereof, to institute and prosecute to judgment, proceedings in *quo warranto* for the forfeiture of the corporate rights, privileges, and franchises of any such corporation so offending, or by mandamus or other proper proceedings to compel it to do its duty in that behalf. The word "person" as used in the Act shall include corporations and associations, and the plural as well as the singular.[6]

**§ 1788. Regulating rates and charges for water.**—The first act of the Colorado legislature, in compliance with Article XVI, Section 8, of the State constitution, regulating the rates and charges which might be made for the furnishing of water by corporations or other owners of ditches, canals, and reservoirs, was the Act of February 19, 1879.[1] And although Sections 1 and 2 of this Act were un-

doubtedly superseded by the later Act of April 4, 1887, they are still retained in the Colorado statutes.[2]

The Act of 1887 [3] provides that the county commissioners of each county shall, at their regular sessions in each year, and at such other sessions as they in their discretion may deem proper, in view of the irrigation and harvesting season, and the convenience of all parties interested, hear and consider all applications which may be made to them by any party or parties interested, either in furnishing and delivering for compensation in any manner, or in procuring for such compensation water for irrigation or other beneficial uses, from any ditch, canal, conduit, or reservoir, the whole or any part of which shall lie in such county, which application shall be supported by affidavits showing reasonable cause for such board to proceed to fix a reasonable maximum rate of compensation for water to be thereafter delivered from such works within the county.[4]

Every such board of commissioners, if they find the facts sworn to to be in good faith and that there are reasonable grounds to believe that unjust rates of compensation are, or are likely to be, charged or demanded for water from such works, shall enter an order fixing a day, not sooner than twenty days thereafter, nor later than the third day of the next regular session of their board, when they will hear all parties interested in such water works, or in procuring water therefrom, for any of said uses, as well as all documentary or oral evidence or depositions, taken according to law, touching the

This Act was construed in the following cases: Union Colony v. Elliott, 5 Colo. 371; Northern Colo. Irr. Co. v. Poupprit, 47 Colo. 490, 108 Pac. Rep. 23; Golden Canal Co. v. Bright, 8 Colo. 144, 6 Pac. Rep. 142; South Boulder D. Co. v. Marfell, 15 Colo. 302, 25 Pac. Rep. 504; Wheeler v. Northern Colo. Irr. Co., 10 Colo. 582, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; Grand Junction Irr. Co. v. Fruita Imp. Co., 37 Colo. 483, 86 Pac. Rep. 324.

Board of County Commissioners of Montezuma Co. v. Montezuma etc. Co., 39 Colo. 167, 89 Pac. Rep. 794, holding that "reasonable compensation" implies that something must be given for the service, and that a rate fixed affording no profit to the ditch owner may be enjoined.

4 Wheeler v. Northern Colo. Irr. Co., 10 Colo. 582, 17 Pac. Rep. 487, 3 Am. St. Rep. 603; Montezuma County v. Montezuma Water Co., 39 Colo. 166, 89 Pac. Rep. 794; Golden Canal Co. v. Bright, 8 Colo. 144, 6 Pac. Rep. 142.

said ditch or other works, and the cost of furnishing water therefrom. At the time so fixed all persons interested on either side of the controversy may appear by themselves, their agents, or attorneys. The applicant, if the application be made by a party desirous of procuring water, shall, within ten days from the time of entering of such order, cause a certified copy of such order to be served upon the owners of such works, or upon the president, secretary, or treasurer, if they be owned by a corporation having such officers. If the applicant be the owner or party controlling such works, such notice shall be given by causing printed copies of such order in handbill form, in conspicuous type, to be posted securely in ten or more public places throughout the district watered from such works (if the water is used for irrigation), and one copy shall be posted for every mile in length of such ditch; but if such ditch or other works be for the supply of water for milling or mining, it shall be sufficient to serve one copy on the parties taking water therefrom.

The said board may adjourn or postpone any hearing from time to time as may be found necessary; and they shall hear and examine all legal testimony or proofs offered by any party interested concerning the original cost of such works, and the cost and expense of maintaining and operating the same; they may issue subpoenas for witnesses and for the production of all books and papers required for evidence before them. The District Court of the proper county may compel obedience to subpoenas or punish for refusal to obey.

"Upon hearing and considering all the evidence and facts and matters involved in the case, said board of commissioners shall enter an order describing the ditch, canal, conduit, reservoir, or other work in question with sufficient certainty and fixing a just and reasonable maximum rate of compensation for water to be thereafter delivered from such ditch or other work as last aforesaid, within the county in which such commissioners act, and such rate shall not be changed within two years from the time when they shall be so fixed, unless upon good cause shown."

Every person who swears falsely in such proceedings shall be deemed guilty of perjury.

"All Acts and parts of Acts inconsistent with the provisions of this Act are hereby repealed, but such repeal shall not work any

interference with any proceeding by any board of county commissioners now pending, saving that any such proceeding may, at the request of either party, be carried on to completion under the provisions hereof."[5] This repealing section undoubtedly repealed all provisions as to the procedure in such matters as provided for in the Act of February 9, 1879, but it did not repeal Section 3 of said Act relating to the right of persons to continue to purchase water.[6]

§ 1789. **Anti-royalty Act.**—It shall not be lawful for any person owning or controlling any ditch, canal, or reservoir carrying or storing water for compensation for any of the beneficial uses named, to demand, bargain for, accept, or receive from any person who may apply for water for any of the aforesaid purposes any money or other valuable thing whatsoever, or any promise or agreement therefor, directly or indirectly, as a royalty, bonus, or premium prerequisite or condition precedent to the right or privilege of applying, or bargaining for, or procuring such water. "But such water shall be furnished, carried, and delivered upon payment or tender of the charges fixed by the county commissioners of the proper county as is, or may be, provided by law. Any and all moneys, and every valuable thing, or consideration of whatsoever kind, which shall be so, as aforesaid, demanded, charged, bargained for, accepted, received, or retained, contrary to the provisions of this section, shall be deemed and held an additional and corrupt rate, charge, or consideration for the water intended to be furnished and delivered therefor, and wholly extortionate and illegal; and when paid, delivered, or surrendered may be recovered back, . . . together with costs of suit, including reasonable attorneys' fees, by proper action in any court having jurisdiction. And in addition thereto, every person so collecting or demanding illegal rates shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not less than $100 nor more than $5000, or by imprisonment for not less than three months nor more than one year, or by both."[1]

Northern Colo. Irr. Co. v. Richards,

**§ 1790. The adjudication of rights—Jurisdiction.**—In a previous chapter of this work we have discussed the statutory adjudication of water rights.[1] The Colorado statutes provide for full special proceedings for the adjudication of such rights. These proceedings are more elaborate than those found in any of the other States, and are the result of various Acts of the legislature. The provisions for these statutory adjudications, as determined by the Supreme Court of the State, only apply to actions as between main ditches which take their water directly from the natural streams, and do not apply to controversies between the actual consumers under those ditches. The adjudication as between the rights of the latter is left to the ordinary proceedings in equity.[2]

For the purpose of the adjudication of such rights, the Act of 1879 [3] provides that jurisdiction is thereby vested exclusively in the District Court of the proper county; but when any water district shall extend into two or more counties, the District Court of the county in which the first regular term after the first day of December in each year shall soonest occur, according to the law then

2 For the adjudication of water rights in equity, see Chap. 78, Secs. 1530-1566.

"That the question of the title of sundry owners and users of water covered by the priorities awarded to the same ditch can not be litigated or settled in the adjudication proceedings is well settled in this State." Park v. Park, 45 Colo. 347, 101 Pac. Rep. 406.

"The rights, if any, which plaintiff asserts, must be determined in an appropriate action brought for that purpose." Evans v. Swan, 38 Colo. 92, 88 Pac. Rep. 149.

See, also, Woods v. Sargent, 43 Colo. 268, 95 Pac. Rep. 932; Combs v. Farmers' etc. Co., 38 Colo. 420, 88 Pac. Rep. 396; O'Neil v. Ft. Lyon Canal Co., 39 Colo. 487, 90 Pac. Rep. 849; Putnam v. Curtis, 7 Colo. App. 437, 43 Pac. Rep. 1056; Hallet v. Carpenter, 37 Colo. 30, 86 Pac. Rep. 317; Oppenlander v. Left Hand D. Co., 18 Colo. 142, 31 Pac. Rep. 854.

"The Acts of 1879 and 1881 are in the nature of police regulations to secure the ordinary distribution of water for irrigation purposes, and to this end they provide a system of procedure for determining the priority of rights as between carriers. . . . The authority of the general assembly to enact laws regulating the distribution of water to actual appropriators, provided they do not substantially affect the constitutional or vested rights, is undoubted." Farmers' etc. Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 767.

3 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3276; Rev. Stats., 1908, Sec. 3276; Laws, 1879, p. 99, Sec. 19.

in force, shall be the proper court in which the proceedings shall be commenced; "but where said proceedings shall be once commenced, by the entry of an order appointing a referee in the manner and for the purpose hereinafter in this Act provided, such Court shall thereafter retain exclusive jurisdiction of the whole subject until final adjudication thereof is had, notwithstanding any law to the contrary now in force." [4]

The Act of 1881 [5] provides that all parties may be protected in their lawful rights to the use of water for irrigation, who should, on or before the first day of June, 1881, file with the clerk of the district court a statement of claim, under oath, giving a complete description of the right and the ditch, canal, or reservoir through which the water was taken or in which it was stored and if such ditch was without a name the owners must choose and adopt one, and the name of the natural stream from which the water was taken and the present capacity of the works and also the number of acres

of land lying under and being or proposed to be irrigated from such ditch, canal, or reservoir.[6]

By the Act of 1903 [7] it was further provided that the owner or owners of any water rights derived from any natural stream, acquired by appropriation and used "for any beneficial purpose other than irrigation," may have his or their right established and decreed by petitioning the district court and by complying with the procedure and requirements of the law now applicable to the adjudication of water rights for irrigation purposes.[8] In determining such rights it is the duty of the court to recognize and protect, as far as possible under the constitution of the State and the decisions of the appellate courts applicable thereto, the vested right of all appropriations of water for irrigation purposes, especially where such rights have been duly adjudicated by the court in statutory proceedings for the determination of the priority of rights to the use of water for irrigation purposes.[9]

**§ 1791. The adjudication of rights—Procedure.**—When at any time any one or more persons, associations, or corporations interested as owners of any ditch, canal, or reservoir shall present to the district court of the proper county a motion, petition, or application in writing, praying said court to adjudicate the priorities of rights to use of water for irrigation or other purposes [1] between the several ditches, canals, and reservoirs in such districts, the court shall appoint a day for commencing to hear and take evidence in such adjudication at which time it shall be the duty of the court to hear all evidence which may be offered by or on behalf of any one interested.[2]

2 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3284; Rev. Stats., 1908,

Upon the subject of notice it is provided that upon the making of such order, the clerk must publish a copy of the same and shall notify all persons interested to appear at such court at the time so appointed. Ten printed copies shall also be posted in ten public places in such water district, not less than 20 days before the day so appointed. Proof of publication and posting the said notices must be made and filed with the clerk. In addition thereto, the party or parties moving such adjudication shall cause a written or printed copy of the notice to be served on every person, association, or corporation shown by the statement of claim on file.[3] In case any party is not served as provided, the clerk must mail a copy directed to the address of the party, shown in the statement of claim. After a general decree has been entered in such water district, no further publication or posting of such notice or any notice of such individual subsequent proceedings shall be required unless by order of the court upon good cause shown therefor; and in all such proceedings subsequent to the entry of such general decree, written notice shall be given in such manner as is now or may hereafter be provided for the service of summons in other civil cases.[4]

If for any cause the judge of said court shall deem it impracticable or inexpedient to proceed to hear such evidence in open court, he shall, instead of the order mentioned above, make and cause to be entered of record an order appointing some discreet person, prop-

tion, or corporation representing any ditch, canal, or reservoir shall be permitted to offer any evidence before said referee until he, she, or they shall have filed a statement of claim in substance the same in all respects as is required to be filed under the provisions of Section 1 hereof."[6] No claim of priority of any person on account of any ditch, canal, or reservoir as to which he, she, or they shall have failed or refused to offer evidence under any adjudication herein provided for, shall be regarded by any water commissioner in times of scarcity of water, or until a decree adjudging such priority shall have been made.[7]

**§ 1792. The adjudication of rights—The decree and judgment.**—Upon the subject of decrees in such actions, the Court must consider all such evidence, together with any and all evidence, if any, which may have been theretofore taken in said district by any referee, and also the arguments of the parties or their counsel, and shall ascertain and find from such evidence as near as may be the date of the commencement of such ditch, canal, or reservoir, together with the original size and carrying capacity thereof, the time of the commencement of each enlargement or extension thereof, if any, with the increased capacity thereby occasioned, the time, spent, severally, in such construction and enlargement and extension, if any, the nature of the work, and all such facts as may tend to show the compliance with the law. And the court shall determine the matters put in evidence "and make and cause to be entered a decree determining and establishing the several priorities of right, by appropriation of water of the several ditches, canals, and reservoirs in such water district concerning which testimony shall have been offered, each according to the time of its said construction and enlargement or enlargements or extensions, with the amount of water which shall be held to have been appropriated by such construction and enlargements or extensions, describing such amount by cubic feet per second of time, if the evidence shall show sufficient

data to ascertain such cubic feet, and if not by width, depth, and grade, and such other description as will most certainly and conveniently show the amount of water intended as the capacity of such ditch, canal, or reservoir in such decree. Said court shall further order that each and every party interested or claiming any such ditch, canal, or reservoir shall receive from the clerk, on payment of a reasonable fee therefor to be fixed by the court, a certificate under seal of the court showing the date or dates and amount or amounts of appropriations adjudged in favor of such ditch, canal, or reservoir under and by virtue of the construction, extension, and enlargements thereof severally; also specifying the number of said ditch and of each priority to which the same may be entitled by reason of such construction, extension, and enlargements."[1]

In case of the appropriation of water for irrigation, the court, in making its decree shall also number the several ditches and canals in the water district, concerning which adjudication is made, in consecutive order according to the priority of appropriation of water thereby made by the original construction thereof, as near as may be, having reference to the date of each decree as rendered, and shall also number the reservoirs in like manner, separately from the ditches and canals, and shall further number each several appropriation of water consecutively beginning with the oldest appropriation without respect to the ditches or reservoirs by means of which such appropriations were made, whether such appropriation shall have been made by means of construction, extension, or enlargement, which number of each ditch, canal, or reservoir together with the number or numbers of any appropriations of water held to have been made by means of construction, extension, or enlargement thereof, shall be incorporated in said decree and certificate of

1 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 3284; Rev. Stats., 1908, Sec. 3284; Laws, 1881, p. 144, Sec. 4; New Loveland etc. Co. v. Consolidated etc. Co., 27 Colo. 526, 62 Pac. Rep. 366, 52 L. R. A. 266; Lake Fork D. Co. v. Haley, 28 Colo. 513, 67 Pac. Rep. 158; Windsor etc. Co. v. Lake Supply D. Co., 44 Colo. 214, 98 Pac. Rep. 729.

A decree embraces rights of both consumers and carriers and operates as an estoppel upon consumers in establishing their separate rights. Combs v. Farmers' etc. Co., 38 Colo. 420, 88 Pac. Rep. 399.

An erroneous decree not void is not subject to collateral attack. Lake Fork D. Co. v. Haley, 28 Colo. 513, 67 Pac. Rep. 158; Water Supply etc. Co. v. Larimer etc. Co., 24 Colo. 322, 51 Pac. Rep. 496, 46 L. R. A. 322; Water Supply etc. Co. v. Tenney, 24 Colo 344, 51 Pac. Rep. 505.

the clerk to be issued to the claimants, so as to show the order of priority of such ditch or canal and of such reservoir and also such successive appropriations of water pertaining thereto, for the information of the water commissioner of the district in distributing the water.[2]

In the decrees in cases of appropriations for purposes other than that of irrigation the said district court shall number consecutively and chronologically all such water rights, similar to the system of numbering priorities for irrigation purposes, designating the amount of each appropriation in cubic feet per second of time, and shall specifically state the particular purpose for which said appropriation is granted, that is, whether the same be for power or manufacturing purposes, domestic use, storage purposes, or any other beneficial use of said waters. All of such appropriations other than appropriations for irrigation purposes shall be designated by and in one series of consecutive numbers herein provided for.[3]

Each party upon the payment of the fee therefor is entitled to receive a certificate under the seal of the court showing the date or dates, the amount or amounts of the appropriations adjudged to his particular ditch. The holder of such certificate shall exhibit the

same to the water commissioner who shall be guided thereby in his distribution of the water. Said certificate must also be recorded in each county into which the ditch, canal, or reservoir shall extend, and said certificate shall be *prima facie* evidence of so much of said decree as shall be recited therein, in any suit or proceeding in which the same may be relevant.[4]

The clerk of any court of the State issuing judicial decrees fixing the priorities of appropriation of water for irrigation and other beneficial purposes shall, within ten days after such decrees have been entered, forward one certified copy to the State Engineer and one copy to the irrigation division engineer having jurisdiction over the water district in which said decree shall have been entered. Upon the receipt of such copies both the State Engineer and the division engineers shall file and preserve the same and make a tabulated statement of such decrees.[5]

**§ 1793. The adjudication of rights—Appeal—Independent suits—Re-argument and review.**—Any party or parties representing any ditch, canal, or reservoir, or any number of parties representing two or more which are affected in common with each other by any portion of such decree, may have an appeal from said district court to the Supreme Court. The appellants must file a statement in writing, under oath, which statement shall show that they claim a valuable interest in ditch, canal, or reservoir, or two or more of such which are affected in common with each other by some portion of the decree, also stating the name or names, or otherwise, the description of any one or more ditches, canals, or reservoirs, which by said decree derive undue advantage in respect of priority as against that of those represented by the appellants. An order may then be made by the judge allowing the appeal, who shall fix the amount of the appeal bond. This order shall then be entered of record, a copy of which must be served upon each of the appel-

lees and also published and posted. The transcript of the record must be filed with the clerk of the Supreme Court within six months after said appeal shall have been allowed. "Only so much of the decree appealed from and so much of the evidence as shall affect the appropriations of water by means of the construction or enlargement or re-enlargement of the several ditches, canals, and reservoirs mentioned in the order allowing the appeal, need be copied into the bill of exceptions.

"The Supreme Court, in all cases in which judgment is rendered, and any part of the decree appealed from is reversed, and in which it may be practicable, shall make such decree in the matters involved in the appeal as should have been made by the district court, or direct in what manner the decree of that court shall be amended." Costs on appeal shall be awarded as the court in its discretion shall hold to be equitable.[1]

Independent actions are provided for and nothing in the Act or in any decree rendered under the provisions thereof shall prevent any person, association, or corporation from bringing and maintaining any suit or action whatsoever hitherto allowed in any court having jurisdiction, to determine any claim of priority of right to water, by appropriation thereof, for irrigation or other purposes, at any time within four years after the rendering of a final decree under this Act in the water district in which such rights may be

claimed, save that no writ of injunction shall issue in any case restraining the use of water for irrigation in any water district wherein such final decree shall have been rendered, which shall affect the distribution and use of water in any manner adversely to the rights determined and established by and under such decree, but injunctions may issue to restrain the use of water in such district not affected by such decree, and restrain violations of any right thereby established, and the water commissioner shall continue to distribute the water according to the right of priority determined by such decree until in such suit it shall be otherwise determined and such water commissioner have official notice of the same. After four years from the rendering of the final decree in any water district all parties whose interests are thereby affected shall be deemed and held to have acquiesced in the same, except in the case of suits before then brought, "and thereafter all persons shall be forever barred from setting up any claim to priority of rights to water for irrigation in such water district adverse or contrary to the effect of such decree."[2]

The district court shall have the power to order, for good cause shown, and upon terms just to all parties a re-argument or review, with or without additional evidence, of any decree made under the provisions of the Act, whenever said court or judge shall find from the cause shown for that purpose by any party or parties feeling aggrieved, that the ends of justice will be thereby promoted; but no review or re-argument shall be ordered unless applied for by petition or otherwise within two years from the time of entering the decree complained of.[3]

**§ 1794. Damages from leakage or overflow.**—The owners of reservoirs are made the insurers against all damages caused thereby, in the following language:

"The owners of the reservoirs shall be liable for all damages arising from leakage or overflow of the waters therefrom or by floods caused by breaking of the embankments of such reservoirs.[1]

"None of the provisions of this Act shall be construed as relieving the owners of any such reservoir from the payment of such damages as may be caused by the breaking of the embankments thereof, but in the event of any such reservoir overflowing, or the embankments, dams, or outlets breaking or washing out, the owners thereof shall be liable for all damages occasioned thereby."[2]

Also, under the Act of April 7, 1899,[3] where the charge and control of State reservoirs were left to the county commissioners wherein the same were situated, it is provided that the county shall assume and be held responsible for any damages resulting from breakage of dams or water discharges therefrom.

**§ 1795. Liens on ditches, canals, and other works.**—Upon the subject of liens the Colorado statute provides that mechanics, material-men, contractors, subcontractors, builders, and all persons of every class performing labor upon or furnishing materials to be used in the construction, alteration, addition to, or repair, either in whole or in part, of any ditch, flume, aqueduct, reservoir, or tunnel, also engineers who have furnished plans for the same, shall have a lien upon the property upon which they have rendered service or bestowed labor or for which they have furnished materials, which lien may be foreclosed upon following the proceeding prescribed by the statute.[1] "Such liens shall alike attach to rights of water and rights of way that may in any manner pertain to any kind of property hereinbefore specified and to which such liens attach. In case of corporations such liens shall attach to all the franchises and charter privileges that may in any manner pertain to said specified property."[2]

The owners of ditches and canals must carefully maintain the embankments thereof, "so that the waters of such ditch may not flood or damage the premises of others," etc.[3]

Any person or company who performs labor or furnishes material or supplies for constructing, altering, or repairing any well, by virtue of a contract with the owner or his authorized agent, shall have a lien to secure the payment of the same upon such well and upon the materials and machinery and equipment and supplies so furnished, and upon the interest that the owner has in the real property upon which such well is situated; said lien may be foreclosed according to the laws relating to mechanics' liens.[4]

By the Act of May 29, 1911,[5] it was provided for the protection

[5] Laws, 1911, Chap. 163, p. 490, Secs. 1-3.

of laborers, mechanics, ranchmen, farmers, merchants, and other persons furnishing work or labor, material, ranch or farm products, provisions, goods, or supplies to contractors or subcontractors in the construction of railroads, reservoirs, and irrigation canals, by compelling the owners to require a bond for such protection from the contractors.

"No remedy given in this Act shall be construed as preventing any person from enforcing any other remedy which he otherwise would have had, except as otherwise herein provided. The practice under this Act shall be in accordance with the Code of Civil Procedure of the State of Colorado. In case of two or more owners, contractors, or subcontractors interested in the same contract, the rule of procedure shall be the same as in the case of one such."[6]

All co-owners of irrigating ditches shall pay for the necessary cleaning and repairing, the proportion that their respective interests bear to the total expense. Upon the failure of one or more co-owners, upon the written request of the owners of one-third of the carrying capacity to board of directors to assist in cleaning and repairing such ditch, the other co-owners shall proceed to clean the same and shall have a lien upon the interest in such ditch owned by such delinquent owner for his proportion of such cost and expenses. This lien may be foreclosed as provided by the statute.[7]

**§ 1796. The irrigation district law.**—By the Act approved May 3, 1905,[1] the legislature of Colorado enacted an irrigation district law based largely upon the "Wright Act" of California.[2]

[6] 3 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 4048; Rev. Stats., 1908, Sec. 4048.

[1] This Act as subsequently amended is found in 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3440-3494g; Rev. Stats., 1908, Secs. 3440-3494, as afterward amended and supplemented by the Act of April 5, 1909, Laws, 1909, Chap. 178, p. 429; Laws, 1905, pp. 246-274, as afterward amended and supplemented as herein indicated.

Previous to the enactment of the above, the Act approved April 12, 1901, Laws, 1901, Chap. 87, p. 198, provided for the organization of such districts; but by the Act of 1905 the earlier Act with its amendments was repealed, and this Act substituted in lieu thereof.

The Act of 1901 was held constitutional. Anderson v. Grand Valley Irr. Dist., 35 Colo. 525, 85 Pac. Rep. 313.

[2] For a full discussion of this law, see Chap. 70, Secs. 1386-1432.

Upon the subject of organization of such districts and the election of their officers, it is provided that it must be by a petition to the board of county commissioners, "filed by a majority of the resident freeholders within said proposed district, and who shall also be the owners in the aggregate of a majority of the whole number of acres belonging to the resident freeholders within said proposed district."[3] Such petition must be considered by the board and the boundaries fixed; and, if allowed, the board must call for an election upon the proposition. At all elections held under the provisions of the Act all persons shall be entitled to vote who are resident freeholders of agricultural lands within the district, or who are owners of lands to the extent of forty acres or more and reside within any county in which part of such district shall extend, and who are qualified electors under the laws of the State. If it appears at such election that at least a majority of the legal voters have voted "yes," the said board, by an order entered on their minutes, shall declare such territory duly organized as an irrigation district, under the name and style theretofore designated, and shall also declare officers who have been duly elected. And the regular election thereafter of the officers of such district shall be held on the first Tuesday after the first Monday in December in each year.[4]

The powers and duties of the board of directors are to make all necessary contracts, to acquire the necessary property and rights by conveyance or by condemnation if necessary; but no contract exceeding the consideration of $10,000 and not exceeding $25,000 shall

Upon the proposition of irrigation districts, Mr. Charles W. Comstock, state engineer of Colorado, in his reports for the years 1909-1910, page 21, makes the following statement: "It is believed that the organization and financing of irrigation districts should be subject to some sort of State control. The present irrigation district law, while facilitating the formation of mutual enterprises in which each man in securing the irrigation of his own land helps to irrigate that of his neighbor, unfortunately lends itself to the manipulation of shrewd and unscrupulous promoters who do not hesitate to take advantage of ignorance on the part of many land owners with regard to financial and engineering problems to promote districts which may or may not have within them the elements of success."

Such petition must be properly signed. Ahern v. High Line Irr. Dist., 39 Colo. 409, 89 Pac. Rep. 963.

4 2 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3440-3449; Rev. Stats., 1908, Secs. 3440-3449; Laws, 1905, p. 246, Secs. 1-10; Secs. 4, 6, as amended, Laws, 1907, p. 488, secs. 1, 2.

be binding unless the same shall be authorized by the legal electors in writing, and no contract in excess of $25,000 shall be binding until such contracts shall have been ratified at an election in the manner as provided for the issue of bonds. The said board may also adopt necessary rules and regulations for the distribution of water. "All waters distributed shall be apportioned to each land owner *pro rata* to the lands assessed under this Act within such district." The said board may rent or lease water for the use of the land owners in the district. The board may also lease or rent water to settlers or occupants of the public domain.[5] The board shall hold regular meetings, all of which shall be public. The title to all property acquired shall vest in the district. The district may sue and be sued.[6]

Provisions are made for the issuance of bonds by holding an election therefor, also for their sale and payment.[7] "Said bonds and the interest thereon shall be paid by revenue derived from an annual assessment upon the real property of the district and the real property of the district shall be and remain liable to be assessed for such payments as herein provided."[8]

It is made the duty of the board on or before September first of each year to determine the amount of money required to meet the maintenance, operating, and current expenses for the ensuing year and to certify such amount to the county commissioners. It is made the duty of the county assessor to assess "all real estate, exclusive of improvements," lying within any district. "All lands within the district for the purposes of taxation under this Act shall be valued by the assessor at the same rate per acre: *Provided,* that in no case shall any land be taxed for irrigation purposes under this Act, which from any natural cause can not be irrigated or is incapable of cultivation."

The county commissioners must then levy the amount of the assessment or rate. For the purpose of the collection of the assess-

ment the county treasurer is made *ex officio* district treasurer. And for this purpose the revenue laws of the State are applicable.[9]

The board of directors may let all contracts and authorize the payment of all claims against the district. No indebtedness must be incurred except such as is expressly authorized by law.[10]

In case of insufficient supply of water, the board may distribute the water as they may in their judgment think best for the interest of all parties concerned. No property must be taken without just compensation.[11]

Provisions are made for the changing of boundaries of districts, either by the annexation of contiguous territory [12] or by the exclusion of lands from such district.[13] Such districts may be dissolved upon an election being held for that purpose, provided that all claims and bills have been fully satisfied.[14] Special proceedings are provided for the judicial examination and confirmation of all proceedings as to the organization of a district or any proceedings of the board.[15]

By the supplemental Act of April 5, 1909,[16] it was provided that State Agricultural College and public school lands might be included within irrigation districts, and that all such lands so included may be assessed for irrigation purposes and such assessments paid by the State treasurer.

By the Act of June 2, 1911,[17] it was provided that for the purpose of furnishing water and securing water rights for State lands, the State board of land commissioners may petition all such lands into irrigation districts at the time or after the formation of such districts. And for this purpose the State board of land commissioners shall be considered in all respects a freeholder, so long as such lands remain unsold; but, after sale, the purchaser shall be entitled to all the rights of a freeholder. The State board shall have full power to secure to such irrigation district so furnishing the water for the irrigation of such State lands, the payment of the cost of the water rights upon the lands.

§ 1797. **The Carey Act in Colorado.**—The State of Colorado also accepted the provisions of the Carey Act and its legislature provided a complete law for the operation and enforcement of said Act.[1] "The selection, management, and disposal of said lands and all such lands as may hereafter be granted to the State of Colorado by the United States shall be vested in the State board of land commissioners of the State of Colorado, as now or hereafter constituted," etc.

It is further provided that any person, company of persons, associations, or incorporated company desiring to construct ditches, canals, or other irrigation works to reclaim land under the provisions of the Act, shall file with the board a request for the selection on behalf of the State by the board of the land to be reclaimed, designating said land by legal subdivisions. This request must be accompanied by a proposal to construct the ditch, canal, or other works necessary for the complete reclamation of said lands, and such proposal must be prepared in accordance with the rules of the board.

The person, company of persons, associations, or incorporated companies making an application to the board for the selection of such lands shall file with the State Engineer an application to appropriate water for the reclamation of the lands described in the request to the board. This application shall be of form prescribed by the State Engineer. The board must examine the said proposal

[17] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 5218-a to 5218-c; Laws, 1911, Chap. 85, p. 211, Secs. 1-3.

[1] 4 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 5138-5160; Rev. Stats., 1908, Secs. 5138-5160.

and, if feasible in all respects, it must be approved by the board, which shall instruct the register to file in the local land office a request for the withdrawal of the land described in said proposal. "No request on which the State Engineer has reported adversely, either as to the water supply, the feasibility of the construction, or capacity of the works, or as to the character of the land sought to be irrigated, shall be approved by the board." In case of the rejection of the proposal a second one may be made.

Upon the withdrawal of the land by the Department of the Interior it is made the duty of the board to enter into a contract submitting the proposal for the construction of the said proposed works.

No proposal shall be considered by the board which requests a greater time than five years for the construction of the works and all proposals shall state that the work shall begin within six months from the date of the contract, and that at least one-tenth of the construction shall be completed within two years from the date of the contract; that the construction shall be prosecuted diligently and continuously to completion, and that a cessation of work under the contract for a period of six months after the second year, without the sanction of the board, will forfeit to the State all rights under said contract, provided that upon good cause extensions of time may be made by the board. Provisions are also made for the forfeiture of the rights acquired under the contract in case of default and the sale of the property.

The State is exempted from liability for any work constructed under any contract made within the provisions of the Act.

Immediately upon the withdrawal of any land and the inauguration of the work by the contractors, it is made the duty of the board to give public notice that said land is open for settlement and the price and terms upon which said land will be sold to settlers by the State. Any citizen of the United States may make application to the board to enter any of said land in an amount not exceeding 160 acres. Such application must be accompanied by a certified copy of the contract for a perpetual water right made and entered into by the party making application, with the person, company, or association who have been authorized by the board for reclamation of said lands. All applications for entry shall be accompanied by the payment of 25 cents per acre, which shall be paid as a partial pay-

ment on the land if the application is allowed. "The board shall dispose of all lands accepted by the State under the provisions of this Act, at a uniform price of 50 cents per acre." It is made the duty of the settlers within one year to cultivate and reclaim not less than one-sixteenth part of the land filed upon, and within two years after his notice that the company is prepared to furnish water, the settler shall have actually irrigated and cultivated not less than one-eighth of the land filed upon, and within three years from said notice the settler shall appear before the register or judge or clerk of the district court to make final proof of reclamation.

A lien is given for deferred water right payments which may be foreclosed and sold. The State board of land commissioners is given power to provide suitable rules for the filing of proposals for construction of irrigation works, and for entry and payment of the land by settlers. The board is required to issue on or before the 13th day of November of each year, setting forth in detail the names, location, and character of the irrigation works in process of construction, the acreage and legal subdivisions of land intended to be reclaimed, and other necessary facts prescribed by the Act.

§ 1798. **The drainage of lands.**—By the Act approved April 11, 1903,[1] whenever any person, company, or corporation desires the construction, enlargement, or extension of any ditch, drain, or water course for the purpose of draining and reclaiming seeped or marshy land, they shall file with the board of county commissioners a petition signed by one or more of the land owners who own or represent the major portion of the land which would be affected by the proposed improvement. The petition must set forth the necessity for such improvement and the full details relative thereto. A bond must be given by the petitioner, conditioned to pay all expenses incurred by the county or counties on account of such improvement. The county commissioners must then appoint a board of viewers of three disinterested persons, residents of the county, who in turn shall select a competent engineer to assist them. The board shall notify all resident land holders 20 days prior to the date

1 3 Colo. Stats. Ann., Morr. Ed., 1911; Secs. 3188-3200; Rev. Stats., 1908, Secs. 3188-3200; Laws, 1903, p. 209, Secs. 1-13.

See, also, for drainage districts, Sec. 1799.

of a meeting set by them of such meeting. All persons whose lands are affected may appear and be heard. If the viewers find that the proposed improvement is not feasible, they shall so report to the county commissioners, and the costs and expenses incurred shall be paid by the original petitioners.

If, however, the improvements shall be found feasible and of use and benefit and to be desired by the owners representing a major portion of the lands affected, the board shall so report and shall include in their report a detailed recommendation of the methods to be pursued in prosecuting the work; they shall also fix and recommend the proportionate assessment for each tract of land affected. The plan so recommended may be adopted by the board, but any person may appeal from such order of the board to the district court. The work must be then let by contract to the lowest responsible bidder, and the assessments for the payment therefor must be collected by the county treasurer in the same manner as for other taxes. The right of eminent domain shall extend to all improvements constructed under the Act.

"All waters gathered by such drainage improvement shall be the property of those from whose lands the same is taken by such drainage canal, and the same shall be prorated among the different land holders from which such water is taken, according to the cost of improvement assessed against each one."

§ 1799. **Drainage districts.**—Colorado has also adopted a drainage district law modeled somewhat upon the irrigation district law [1] and somewhat upon the California drainage district law.[2]

The Act approved April 24, 1909,[3] provided for the organization, management, and control of such drainage districts. By the Act approved June 2, 1911,[4] the earlier Act of 1909 was repealed and an entirely new Act to provide for the organization and government of drainage districts was substituted in lieu thereof.

The latter Act, for the purpose of the organization of such a drainage district, provides that upon the presentation of a petition signed by a majority of the owners, whether residents or non-residents of

1 See Sec. 1798.

2 See Sec. 1757.

3 Laws, 1909, Chap. 161, p. 345, Secs. 1-23.

4 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3494-h to 3494-o3; Laws, 1911, Chap. 124, p. 311, Secs. 1-82.

such lands requiring drainage, to the board of county commissioners of the county where the greater portion of said lands lie, and accompanied with a map and full details thereof and praying that the board cause the question of the organization of the district to be submitted to a vote of such owners and accompanied by a bond or the cash to cover the costs of such organization, such commissioners shall cause the publication of such petition and a time to be set for the hearing upon the same. The board has the power to fix the boundaries of such district and shall make an order allowing the prayer of said petition. When the prayer of such petition is that such district may be established without an election such petition may be granted, and the county commissioners will then act as the district directors. When the petition prays that an election be held, the board shall order the same and cause notice to be published stating the time and place. At such an election three directors of the district must be elected and every owner of land within the district, who is a citizen of the United States and is a resident of the State of Colorado shall be entitled to vote at such election. And if it shall appear that a majority of the votes cast are in favor of the organization the board of county commissioners shall make an order declaring such drainage district to be duly organized under the name theretofore designated and shall cause a certified copy of such order to be filed with the county clerk of each county in which any portion of such district lies. From and after the date of such filing the organization of said district shall be complete, and "no action shall be brought or maintained or defense made affecting the validity of the organization of said district, unless the same shall have been commenced or made within one year after the entry of said order."[5]

The board of directors shall elect a president from the members and shall appoint a secretary and adopt a seal. The board shall have the care and management of the affairs and business of the district, and shall fix the compensation of all employees. The board may cause surveys to be made and let contracts for the works, and may acquire rights of way for the same, by condemnation or otherwise, but they shall have no power to authorize any expenditure involving more than $5,000 without the written consent of the land

[5] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3494-h to 3494-bl; Laws, 1911, Chap. 124, p. 311, Secs. 1-20.

owners, or more than $10,000 without submitting the same to an election in said district. The meetings of the board shall be held quarterly, and shall be public. The right is given to enter all lands to make surveys and examinations. The title to all property acquired shall vest in the district, and shall be exempt from taxation. The district may sue and be sued. The directors shall each receive $2.50 per day for the time actually expended in the business of the district. There shall be an annual election of the directors of such districts. An oath of office must be taken and a bond given by the directors, and a general office of the district must be established. Full proceedings are provided for the holding of the annual elections, and the filling of vacancies.[6]

The county treasurer shall be *ex officio* treasurer of the drainage district. He shall receive all moneys and pay out the same only upon warrants ordered by the board of directors. After such warrants have been presented and there are no funds, they shall draw interest at the rate of 6 per cent per annum. The secretary of the district shall keep a register of all warrants drawn.[7]

The board of directors, on or before July 1 of each year, shall determine the amount of money required to meet the current expenses of the coming year, and shall fix the amount per acre necessary to be assessed against the lands of the district to pay the same, and shall cause an order to be entered that each tract of land within said district shall be assessed at said rate per acre. Such assessment must be levied by the county assessor, and collected by the treasurer, under the State law for the collection of taxes.[8]

Contracts may be let by the board for the construction of the works to the lowest responsible bidder, and a bond must be given by the contractor of not less than 10 per cent of the contract price, conditioned upon the faithful performance of the contract.[9] Provisions are made for the issuance of bonds of a district upon holding an election therefor, also for their sale and redemption.[10]

[6] 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3494-c1 to 3494-b2; Laws, 1911, p. 316, Secs. 21-44.

Rights of way are granted across water courses, streets, highways, railway, canal, or ditch. Such rights may be acquired by condemnation over private property. The right of way is also given over all State lands. No director or officer of a district must be interested in any contracts. "Water gathered or developed by drainage systems shall be the property of the drainage district."[11] Judicial notice must be taken of the organization and existence of any drainage district from and after the filing for record in the office of the county clerk of the certified copy of the order of the board of county commissioners declaring such district formally organized.[12] The board of directors may also bring proceedings in the District Court for the confirmation of all proceedings, the same as in the case of irrigation districts.[13] Upon petition of the owner thereof and the payment of a sum of all assessments per acre theretofore made upon the lands comprising such district, the board of directors may authorize the inclusion of any contiguous tract of land.[14]

Provisions are also made for the organization of voluntary drainage districts by the owners of lands unanimously agreeing upon a system of drainage in writing. They shall submit such agreement to the board of county commissioners, who may authorize the organization of such a district.[15] Provisions are also made for the dissolution of all drainage districts.[16]

**§ 1800. Acts in aid of the National Reclamation Act.**—There are a number of Acts passed by the Colorado legislature in aid of the National Reclamation Act of June 17, 1902.[1]

Upon the subject of water users' associations, by the Act of 1905,[2] all such associations should be exempt from income and annual

11 3 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 3494-b3 to 3494-e3; Laws, 1911, p. 327, Secs. 70-73.

tax, but shall be required to pay, as preliminary to their incorporation, only a fee of $20 for the filing and recording of their articles. That such associations, with the consent of the county commissioners, furnish the clerk and recorder of any county in the State a book, or books, containing printed copies of its articles of incorporation and forms of subscription for stock, and the charges for the recording thereof shall be made on the basis of the number of words actually written therein.

A statute provides that users of water under the Carey Act may join water users' associations and be entitled to additional water for the reclamation of their lands.[3]

By the Act of 1903[4] the State Canal No. 3 was ceded to the United States, without cost, to the end that the United States may have full and complete authority to construct, maintain, operate, and dispose of said canal, and any and all water and rights in connection therewith.

The Act approved April 7, 1905,[5] authorized the appropriation of $1,500 to make investigations, preliminary surveys, and maps for reservoir sites on the Rio Grande River and its tributaries, and presenting the same to the United States Government.

The Act approved April 12, 1905,[6] provided for the sale of any State lands needed by the United States for irrigation works, other than for rights of way, at a price not to exceed $3.50 per acre.

This Act also provided that no lands belonging to the State, under any reclamation project of the United States, shall be sold except in conformity with the classification of farm units by the United States, and that the title to such lands shall not pass from the State until the applicant therefor shall have fully complied with the provisions of the laws of the United States and the regulations thereunder concerning the acquisition of the right to use water, and shall produce evidence thereof duly issued.

Under the same Act rights of way were granted over the State

[3] Laws, 1905, p. 360.

For the Carey Act in Colorado, see Sec. 1797.

[4] 4 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 6928; Rev. Stats., 1908, Sec. 6928; Laws, 1903, p. 292, Secs. 1, 2.

[5] Laws, 1905, p. 307, Secs. 1, 2.

[6] 4 Colo. Stats. Ann., Morr. Ed., 1911, Secs. 5183, 5184; Rev. Stats., 1908, Secs. 5183, 5184; Laws, 1905, p. 328, Secs. 22, 23, 35.

lands. But by the Act approved April 23, 1909,[7] the last provision was amended to read as follows: "The right of way is hereby given, dedicated, and set apart to the United States to locate, construct, and maintain such roads, bridges, canals, ditches, tunnels, pipe lines, telephone and transmission lines as may be constructed for the purpose of irrigation, by the authority of the United States, over and through any of the lands which are now, or may be, the property of the State. All conveyances of State lands shall contain a reservation of such rights of way."

But the legislature of the State of Colorado seems to have gotten nervous as to the acts of the Federal Government under the National Reclamation Act, as is indicated by the Act of May 2, 1909,[8] which Act authorized the attorney-general of the State to investigate the acts of the Federal Government in relation to the public lands in and waters of the State; to institute or appear in such suits as he may deem advisable to determine the respective rights of the United States and the State of Colorado and the citizens thereof; to authorize him to employ special counsel to assist him in the discharge of the duties thereby imposed, and making the appropriation of the sum of $20,000, or so much thereof as may be necessary, to carry out the purposes of the Act, and said fund to be under the control and direction of the attorney-general and upon his voucher the auditor of the State shall draw warrants in the usual and ordinary manner. To this the emergency clause was attached.

Again, by the Act of May 11, 1911,[9] the legislature evidently deemed that a further investigation was necessary, and authorized the appointment of a joint legislative committee to investigate the interference by the acts of the Federal Government or of any State, corporation, or individual, with the right of the State to control the waters thereof within its borders; to authorize legal action concerning the same, and making the appropriation of $50,000 for the purposes of the Act; said committee to make a full report to the next session of the General Assembly.

[9] Laws, 1911, Chap. 227, p. 671, Secs. 1-7.

§ 1801. **The pollution of waters.**—Any person who shall in anywise pollute any water course, lake, or pond so as to render the same offensive or unwholesome to the county, town, village, or neighborhood thereabouts, is punishable by a fine not exceeding $300.[1]

If any person shall throw or discharge into any stream of running water, or into any ditch or flume of the State, any obnoxious substance, it is made punishable by a fine of not less than $100 nor more than $500 for each and every offense so committed.[2]

If any person or corporation shall empty or cause to be emptied, or allow the emptying or flowing of oil, petroleum, or other oleaginous substance into any of the waters of the State, it is punishable by a fine of not exceeding $1,000, or imprisonment not exceeding six months, or both.[3]

§ 1802. **Criminal statutes.**—It is made a misdemeanor to wilfully or maliciously damage or interfere with any ditch or other works, or any personal property of any company, punishable by a fine of not to exceed $500, or by imprisonment not to exceed one year, or both.[1]

It is made a misdemeanor to collect, or attempt to collect, any royalty, bonus, or premium, for the furnishing of water over and above the rate fixed by the county commissioners, and punishable by a fine of not less than $100 nor more than $5,000, or imprisonment not less than three months nor more than one year, or both.[2]

Every person owning or controlling any ditch, canal, or reservoir who shall, after demand in writing, made upon him for the supply or delivery of water for any beneficial purpose, and after tender of the lawful rate, refuse to furnish or carry and deliver from such works any water so applied for, which water can or may be, by use

of reasonable diligence in that behalf, and within the carrying or storage capacity of such works, be lawfully furnished and delivered, without infringement of prior rights, shall be deemed guilty of a misdemeanor, and punishable by a fine of not less than $100 nor more than $5000, or imprisonment for not less than three months nor more than one year, or both.[3]

Every person who shall testify falsely in any matter in proceedings before the county commissioners to fix water rates shall be deemed guilty of perjury.[4]

Any person claiming the right to divert water for domestic purposes who shall apply or knowingly permit the water so diverted to be applied to other than domestic purposes, to the injury of any person, shall be deemed guilty of a misdemeanor, and punishable by a fine not less than $50 nor more than $200 for each day of such improper application.[5] Any person guilty of wilfully wasting water is punishable by a fine of not less than $100.[6] It is made a misdemeanor for a water commissioner to wilfully neglect to do his duty in the matter of the distribution of water.[7] The wilful cutting or breaking of any gate, bank, flume, or other works is made a misdemeanor, and punishable by a fine of not less than $5 nor more than $300, or by imprisonment not more than 90 days.[8] It is also made a misdemeanor to interfere with any headgate adjusted by any water commissioner, and punishable by a fine not more than $300, or imprisonment not more than 60 days, or both. "Any person who shall be found using water taken through any such headgate, water box, or measuring device so unlawfully interfered with,

shall *prima facie* be deemed guilty of a violation of this section." The justice of the peace is given jurisdiction of such cases.[9]

It is made a misdemeanor for any water commissioner to receive a bribe, or for any person to give or offer a bribe to a water commissioner, and punishable in each case in any sum not less than $50 nor more than $300.[10] "No trees needed to conserve the snows, ice, or water of any irrigation district shall be cut from any part of the public domain," and it is made a misdemeanor for so doing.[11]

§ 1803. **Taxation of irrigation works.**—Article X, Section 3 of the State constitution provides:

"Ditches, canals, and flumes owned and used by individuals or corporations for irrigating land owned by such individuals or corporations, or the individual members thereof, shall not be separately taxed so long as they shall be owned and used exclusively for such purposes.[1]

"Fifth. Ditches, canals, and flumes owned and used by individuals or corporations exclusively for irrigating lands of such individuals or corporations, or the individual members of such corporations, shall not be separately taxed so long as they shall be owned and used exclusively for such purposes.[2]

"That all ditches used for the purpose of irrigation, and that only where the water is not sold for the purpose of deriving a revenue therefrom, be and the same are hereby declared free from all taxation, whether for state, county, or municipal purposes."[3]

If a canal is owned by a corporation and individuals and is exclusively used to irrigate their lands, it is exempt from taxation. Empire Canal Co. v. Rio Grande County, 21 Colo. 244, 40 Pac. Rep. 449; reversing *Id.*, 1 Colo. App. 205, 28 Pac. Rep. 482.

Exemptions are to be strictly construed. So long as a ditch company has water rights unsold it is not exempt. Murray v. Montrose County, 28 Colo. 427, 65 Pac. Rep. 27.

3 4 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 5546; Rev. Stats., 1908, Sec. 5546.

§ 1804. **Riparian rights in Colorado.**—The Act of the Territorial legislature of Colorado of 1861,[1] re-enacted by the Act approved January 10, 1868,[2] in adopting the common law of England, provides as follows: "The common law of England, so far as the same is applicable and of a general nature, and all Acts and statutes of the British Parliament, made in aid of or to supply the defects of the common law prior to the fourth year of James the First (excepting the second section of the 6th chapter of forty-third Elizabeth, the eighth chapter of thirteenth Elizabeth, and ninth chapter of thirty-seventh Henry Eighth), which are of a general nature, and not local to that kingdom, shall be the rule of decision, and shall be considered as of full force until repealed by legislative authority."

But by the Act of the Territorial legislature of 1864[3] it was provided: "Nor shall the water of any stream be diverted from its original channel to the detriment of any miner, millman, or others along the line of said stream, *who may have a priority of right,* and there shall be at all times left sufficient water in said stream for the use of miners and agriculturists along said stream." This provision remained in force until the adoption of the constitution. It was held by the Supreme Court that: "The priority of right mentioned in this section is acquired by priority of appropriation," and therefore the common law doctrine of riparian rights was abrogated by the section.[4]

It will also be noticed that the language of the section adopting the common law is different from that of some of the similar sections of the statutes of other States.[5] It was adopted, "so far as the same is applicable." And upon this subject, in the same case referred to above, the common law of riparian rights was held not to have been adopted, upon the ground that the same was inapplicable to the conditions of Colorado, the Court saying: "We conclude, then, that the common law doctrine giving the riparian owner a right to the flow of water in its natural channel upon and over his lands, even though he makes no beneficial use thereof, is

1 Laws, 1861, p. 35, Sec. 1.

2 4 Colo. Stats. Ann., Morr. Ed., 1911, Sec. 6295; Rev. Stats. 1908, Sec. 6295; Laws, 1861, p. 35, Sec. 1.

3 Laws, 1864, p. 68, Sec. 32. This Act was repealed in 1868, but re-enacted *verbatim.*

4 Coffin v. Left Hand D. Co., 6 Colo. 443.

5 For the statutes of California, see Sec. 1768.

inapplicable to Colorado. Imperative necessity, unknown to the countries which gave it birth, compels the recognition of another doctrine in conflict therewith."[6] There are also other cases holding that even before the adoption of the State constitution the common law of riparian rights was abrogated, upon the ground that the same was inapplicable to the peculiar arid conditions of Colorado.[7]

The provisions of the Colorado constitution, adopted in 1876,[8] absolutely abrogated the common law of riparian rights within the State, so far as the right of a riparian proprietor to claim the undiminished flow of a stream by or over his lands is concerned, either with or without the actual use of the waters, and substituted in lieu thereof the Arid Region Doctrine of appropriation of waters by the diversion thereof from their natural channels and their application to some beneficial use or purpose.[9] This rule has been

[6] Coffin v. Left Hand D. Co., 6 Colo. 443.

[7] See Yunker v. Nichols, 1 Colo. 551, 8 Morr. Min. Rep. 64; Schilling v. Rominger, 4 Colo. 100; Crisman v. Heiderer, 5 Colo. 589; Sieber v. Frink, 7 Colo. 148, 2 Pac. Rep. 901; Fuller v. Swan River etc. Co., 12 Colo. 12, 19 Pac. Rep. 836, 16 Morr. Min. Rep. 252.

[8] Article 14, Secs. 5-7; see Sec. 1772.

[9] "The doctrine in this State, that the common law rule of continuous flow of natural streams is abolished, is so firmly established by our constitution, the statutes of the Territory, and the State, and by many decisions of this Court that we decline to reopen or reconsider it, however interesting discussion thereof might otherwise be, and notwithstanding its importance." Sternberger v. Seaton Mountain etc. Co., 45 Colo. 401, 102 Pac. Rep. 168.

"Thus it appears that the constitution has, to a large extent, obliterated the common law doctrine of riparian rights, and substituted in lieu thereof the doctrine of appropriation." Oppenlander v. Left Hand D. Co., 18 Colo. 142, 31 Pac. Rep. 854.

"Our constitution dedicates all unappropriated water in the natural streams of the State 'to the use of the people,' the ownership thereof being vested in the 'public.' The same instrument guarantees in the strongest terms the right of diversion and appropriation for beneficial uses." Wheeler v. Northern Colo. Irr. Co., 10 Colo. 582, 17 Pac. Rep. 487, 3 Am. St. Rep. 603.

See, also, Strickler v. Colorado Springs, 16 Colo. 61, 26 Pac. Rep. 313, 25 Am. St. Rep. 245; Combs v. Agricultural D. Co., 17 Colo. 146, 28 Pac. Rep. 966, 31 Am. St. Rep. 275; Farmers' High Line etc. Co. v. Southworth, 13 Colo. 111, 21 Pac. Rep. 1028, 4 L. R. A. 767; Crippen v. White, 28 Colo. 298, 64 Pac. Rep. 184; Cascade etc. Co. v. Empire etc. Co., 181 Fed. Rep. 1011; Snyder v. Colo. etc. Co., 181 Fed. Rep. 62, 104 C. C. A. 136.

adopted by the State courts, and the Supreme Court of the United States gave its sanction to the rule in the case of Kansas v. Colorado[10] by holding that each State "may determine for itself whether the common law rule in respect to riparian rights or that doctrine which obtains in the arid regions of the West of the appropriation of waters for the purposes of irrigation shall control." But prior to that decision some of the inferior Federal courts did not follow the rule to the full extent that it was followed by the State courts.[11] However, the Circuit Court of Appeals, in a case decided in 1910,[12] in criticising some of these early Federal decisions, said: "In Schwab v. Beam[13] a different conclusion was announced, but that decision stands alone, is not in accord with the decisions of the Supreme Court of Colorado respecting the application of the doctrine of appropriation as there prevailing to the use of water, for purposes other than irrigation, and is not sustained by what seems to be the better reasoning." In a late case decided by the Supreme Court of the State[14] it is said: "The doctrine in this State, that the common law rule of continuous flow of natural streams is abolished, is so firmly established by our constitution, the statutes of the Territory, and the State, and by many decisions of this Court, that we decline to reopen or reconsider it, however interesting discussion thereof might otherwise be, and notwithstanding its importance."[15]

There are some of the incidents of riparian ownership which may be cited, outside of the question of the undiminished flow of a stream. For instance, there is the case of the pollution of a stream to the injury of a riparian owner. In a recent case the Court intimated that this might be the case in the following language: "Whether the riparian owner, as against others, has still some rights which the law recognizes, and, if so, what they are, the exi-

gencies of the pending case do not require us to determine," and leaving the question unsettled for the reason that the plaintiff in the case based his right upon the ground that, under the statute, he had the right to the use of the water which was polluted by the acts of the defendant under the Meadow Act.[16]

And as to this Act and that of 1861, granting to the owners upon streams the right to the use of water for irrigation purposes,[17] it may be said that, although they may embody some of the elements of common law rights, they are mere statutory enactments granting such rights, and each permitting the diversion of the water from the natural channels for the irrigation of lands; and, therefore, an action for the infringement of such rights can not be based upon the common law.[18]

# CHAPTER 88.

## HAWAII.

§ 1805. Particular features of the Territory.
§ 1806. Irrigation in the Territory.
§ 1807. Criticism of the Hawaiian laws.
§ 1808. Title to waters—Taxing of water.
§ 1809. The appropriation of water.
§ 1810. Eminent domain—Rights of way for ditches and canals.
§ 1811. Commissioners—Powers of.
§ 1812. The adjudication of water rights—Procedure.
§ 1813. The adjudication of water rights—Hearing—Decision and record.
§ 1814. The adjudication of water rights—Appeal.
§ 1815. Artesian wells of the Island of Oahu.
§ 1816. Riparian rights in Hawaiian Islands.

§ 1805. **Particular features of the Territory.**—The Hawaiian or Sandwich Islands compose the group of eight inhabited and four uninhabited islands in the North Pacific Ocean, lying between 18 deg. 54 min. and 22 deg. 2 min. north latitude, and 155 deg. and 161 deg. west longitude. We have related in a previous section how this group of islands was acquired by the United States.[1]

The islands are exceedingly mountainous and of volcanic origin. The climate is generally warm, but very salubrious. The temperature is equable, and the sky usually cloudless. The northeast trade winds blow for nine months of the year, and the leeward coast, being protected by high mountains, is refreshed by regular land and sea breezes. Very much more rain falls on the windward side of the islands than on the leeward. Thus at Hilo the rainfall ranges between 160 inches and 210 inches per annum,[2] while at Honolulu, on the south coast of Oahu, out of reach of the windward rains, the mean annual rainfall is about 38 inches.

The temperature during the coldest months averages about 62 degrees, F., and that of the hottest months about 81 degrees, F.

1 See Sec. 401.

2 See Irrigation in Hawaii, by Walter Maxwell, Director and Chemist, Hawaiian Station, 1900, Office of Experiment Stations, Bulletin No. 90, U. S. Dept. of Agriculture.

See, also, the Water Resources of Molokai, Hawaiian Islands, by Waldemar Lindgreen, 1903, Water Supply and Irrigation Paper No. 77, U. S. Geological Survey.

§ 1806. **Irrigation in the Territory.**—Irrigation, in spite of the great rainfall, is practiced to a large extent upon the Hawaiian islands. The primary source of water upon the islands is the rainfall, but there are two unfavorable conditions which attend its precipitation: (1) The maximum rain falls during the coolest season, when the crops are in such a condition that the water is not needed; and (2) the chief precipitation is over the mountain areas, where the water falls, soaks down into rocky strata, and quickly runs to the sea, unless arrested by artificial works and returned to the land.

The principal crops grown upon the islands are rice and sugar cane. The lands used for the growing of rice are the lowest flats found at the outlets of the valleys and close to the sea. The lands used for the growing of sugar cane are those higher up and further back from the sea.

The apparently disadvantageous circumstance of a heavy precipitation at a considerable elevation has been turned into special advantage by engineering means. In certain districts the water is collected by small ditches over the mountain areas, where it falls, and is conducted down to the cane-bearing lands below, over which it is distributed by gravity. Where the rainfall can not be easily collected over the mountain areas, the water which sinks down into deep substrata is tapped and arrested at or near sea level, where it is found running toward the sea. From this point the water is lifted and forced up to considerable elevation by high power pumping plants, where it is distributed over the fields.

§ 1807. **Criticism of the Hawaiian laws.**—It can be said that the Hawaiian Islands have a system of laws governing waters and water rights that is largely peculiar to themselves. It is based upon the common law of riparian rights, but by adverse and continuous user for the prescriptive period of twenty years, by others than riparian owners, has limited and restricted the rights of those owners to the extent of the prescriptive rights. It is thus that individual exclusive rights have been acquired. There is no statute in terms which permits the appropriation of waters as the same is known under the Arid Region Doctrine of appropriation. But prescriptive rights have gradually been acquired until it can be said that there are but few streams on the islands that the rights of the riparian owners

thereon are not subject to the exclusive prescriptive rights of others.[1]

Under the authority of the Organic Act, as amended in 1910, the right of eminent domain for ditches and canals was granted by the Act of the Terrritorial legislature of 1911. But this right was limited for ditches and canals used to conduct water for the purposes of irrigation and domestic uses only. Just why it should be so limited we are unable to see.[2]

The adjudication of existing water rights by the commissioners, in the first instance, somewhat resembles the procedure of Wyoming, where the adjudication or determination is, in the first instance, by the board of control, with right of appeal to the courts.[3]

§ 1808. **Title to waters—Taxing of water.**—Where the landlords have obtained, or may hereafter obtain, allodial titles to land, the people on each of their lands shall have a right to drinking water, and running water, and the right of way. "The springs of water, running water, and roads shall be free to all, on all lands granted in fee simple; provided, that this shall not be applicable to wells and water courses which individuals have made for their own use."[1]

The taxing of water as the property of a ditch company, and again as giving increased value to the land irrigated by it is double taxation.[2]

§ 1809. **The appropriation of water.**—There are no provisions of the Hawaiian statutes which in express terms either give to any party the right to appropriate water, as that right is known in the arid region of the States, for his exclusive use, or the method by which an exclusive right to the use of a certain amount of water may be acquired. The right, however, to the exclusive use of water for domestic purposes or irrigation is given, resting upon long-continued custom, prescription, or by grant,[1] and afterwards confirmed by the decisions of the water commissioners and the courts.

1 For riparian rights in Hawaii, see Sec. 1816.

2 See Sec. 1810.

3 For adjudication of rights in Wyoming, see Secs. 2111-2114.

1 Rev. Laws, Hawaii, 1905, Sec. 366.

2 Haiku Sugar Co. v. Fornander, 6 Hawn. 532.

1 That it may be by lease, see Oahu etc. Co. v. Armstrong, 18 Hawn. 258.

It is the well-settled law of the Territory that the exclusive right to the use of water for these purposes can be acquired by adverse and continuous user.[2] Exclusive rights to the use of water acquired by any of the above methods are usually deemed appurtenant to the land for which they were originally acquired; but if no one is injured thereby, the use may be transferred to other lands, without the loss of the right or any portion thereof.[3]

§ 1810. **Eminent domain—Rights of way for ditches and canals.**—The amended Organic Act of the Territory of Hawaii provides as follows:

"The legislature may by general Act provide for the condemnation of property for public uses, including the condemnation of rights of way for the transmission of water for irrigation and other purposes."[1]

In conformity with the above provisions, by the Act of the Territorial legislature, approved April 24, 1911,[2] it was provided that corporations now or hereafter organized to develop, store, convey, distribute, and transmit water for irrigation, and which shall have at least $50,000 of fully paid in capital, represented by cash or by tangible property of a market value equal to the amount at which such property is entered as assets on the books of the company, are

Riparian rights are subject to prescription. Peck v. Bailey, 8 Hawn. 658.

3 Kaoloea Mill Co. v. Stewart, 4 Hawn. 416; Lonoaea v. Wailuku Sugar Co., 9 Hawn. 651; Palolo etc. Co. v. Wong Quai, 15 Hawn. 554.

See, also, Hawaiian etc. Co. v. Wailuku Sugar Co., 15 Hawn. 675, where it was held that there were certain surplus rights which were not appurtenant to any land.

1 Organic Act, Sec. 55, as amended by Act of May 27, 1910, 36 Stat. L. 443.

For condemnation of rights of way, see Secs. 1093-1097.

2 Laws, 1911, Chap. 124, p. 182.

thereby given the right to exercise the power of eminent domain as therein provided. Such corporation shall have the right to condemn rights of way over lands and property for ditches, tunnels, flumes, and pipe lines necessary or proper for the construction and maintenance of a system for conveying, distributing, and transmitting water for irrigation; provided, however, that no such corporation shall exercise such right of condemnation in more than one county. That in the exercise of such powers of eminent domain the procedure shall be, as near as may be, in accordance with the provisions of Chapter 64 of the Revised Laws of Hawaii as now or hereafter amended.

Any right of way which shall be obtained under the provisions of this Act shall lapse and immediately revert to the previous owner or owners thereof, in either of the following events, viz.: (1) If such corporation shall fail during a period of one year, at any time after acquiring the same, to use such right of way for the purposes herein set forth; (2) if such corporation shall use or divert any of the water which shall be conducted through such right of way for any purposes other than irrigation and domestic purposes.

§ 1811. **Commissioners—Powers of.**—Under the various forms of government of Hawaii during the last fifty years, the Kingdom, the Republic, and Territory, from the year 1860 down to the time of the Act of the Territorial legislature of 1907,[1] the authority to adjudicate existing water rights was vested in commissioners, first appointed by the Minister of the Interior, and, after the formation of the Territory, by the Governor. But by the Act of 1907 [2] the authority was taken away from the commissioners and this power vested in the Circuit Judge, sitting in chambers. The commissioners were originally vested with judicial powers for the purpose of these adjudications, and all hearings upon this subject were in the first instance had before them, the right of appeal being granted to the courts.[3] And, as most of the existing water rights in the

1 Laws, 1907, Chap. 56, p. 66.

2 *Supra.*

3 That the commissioners had judicial authority, see Cleghorn's Appeal, 3 Hawn. 216; Waikulu etc. Co. v. Cornwell, 10 Hawn. 476; Davis v. Afong, 5 Hawn. 216.

The jurisdiction of the commissioner to adjudicate rights was concurrent with that of the Circuit Court. Wai-

islands were determined and adjudicated under this mode of procedure, it will be necessary to give a brief abstract of the same. And as the same procedure is practiced before the Circuit Judge, we will make our abstract of the laws in the present tense. We do this for the reason that the construction of the laws by the courts construes the same relative to the acts of the commissioners.

This law provides that there shall be appointed by the Governor, in each election district of the Territory, one competent person to act as commissioner of private ways and water rights; provided, however, that nothing herein shall prevent the appointment of one person for two or more districts, if the same can be done without prejudice to the rights of the inhabitants thereof. No person shall act as commissioner in any case in which he shall have a direct personal interest, or where he shall have direct business relations with either party, or shall be connected with either by ties of relationship of blood or marriage. In case of disability from these or other causes, a commission *pro tem.* shall be appointed at once by the Governor. Any vacancy shall be filled as soon as possible by the said Governor.[4]

The commissioners are given large powers and discretion, which are specified as follows: They have the power to administer oaths, to punish for contempts, to grant adjournments, to subpoena and compel the attendance of witnesses, to issue execution for costs, to enforce a specific performance of a judgment, and to generally exercise the same authority in regard to their special jurisdiction as is by law conferred upon district magistrates.[5]

kulu Sugar Co. v. Cornwell, 10 Hawn. 476.

A water commissioner has no jurisdiction over suits *in rem.* Palolo etc. Co. v. Territory, 18 Hawn. 30.

4 Rev. Laws, 1905, Secs. 2199, 2200.

A commissioner *pro tem.*, legally appointed, has complete jurisdiction over the case, and the regular commissioner could not resume jurisdiction of the case on the removal of his disqualifications. Spreckels v. Wailuku Sugar Co., 8 Hawn. 537.

5 Rev. Laws, 1905, Sec. 2205. On powers of district magistrates, see *Id.*, Sec. 1663.

Davis v. Afong, 5 Hawn. 216, holding that the commissioner can only adjudicate or determine rights, and can not render judgment for past violations against such rights.

See, also, Kahai v. Rose, 7 Hawn. 270; Lum Ah Lee v. Ah Soong, 16 Hawn. 163.

For the general duties of the water commissioner, see Loo Chit Sam v. Wong Kim, 5 Hawn. 130.

§ 1812. **The adjudication of water rights—Procedure.**—It was made the duty of said commissioners within their several districts to hear and determine all controversies respecting rights of private ways and water rights, between private individuals, or between private individuals and the Territory. Any person or persons interested,[1] or the Territory, might apply for the settlement of any rights involved thereunder, whereupon the commissioner should issue summons in like form as that used in the District Court to the party or parties defendant. The summons must be personally served upon each land owner or occupant having an interest in the controversy, whenever such owner or occupant can be found. If, however, such owner or occupant can not be found for such service, the commission shall cause notices in the Hawaiian or English language, as the case may be, to be published either by posting upon the premises, the owners or occupants whereof can not be found, or by insertion in one or more newspapers, which publication shall continue for at least two full weeks prior to the date set for hearing. Such notice shall designate the time and place of hearing, shall indicate the nature of the application made, and shall notify all parties interested to attend and prove their rights, or they will be adjudicated without such attendance, besides any other matter deemed important by the commissioner. Such notice may be published in any case in the discretion of the commissioner. No summons shall be set aside or dismissed because of any technical informality, provided it shall set forth the time and place of hearing and the nature of the right claimed, in terms sufficiently clear for the apprisal of the parties interested. Parties may appear personally or by properly authorized attorney.[2]

The jurisdiction of the commissioner over the adjudication of water rights is not exclusive, but is concurrent only with that of the Circuit Court.[3]

1 A person in possession under a claim of title to land to which an alleged water right is appurtenant is a party "interested." Wailuku Sugar Co. v. Hale, 11 Hawn. 475.

Held, that plaintiff being merely the reversioner of a water right, he could not maintain an action on it, it not being for an injury to the inheritance. Long v. Wai Fong, 9 Hawn. 628.

2 Rev. Laws, 1905, Sec. 2201.

A commissioner has no right to decide a person's rights in water without notifying him of a hearing. Cleghorn's Appeal, 3 Hawn. 216; Lishman v. Perry, 7 Hawn. 266; Palolo etc. Co. v. Territory, 18 Hawn. 30.

3 Wailuku Sugar Co. v. Cornwell, 10 Hawn. 476.

**§ 1813. The adjudication of water rights—Hearing—Decision and record.**—At the time set for the hearing, service of summons or publication of notice having been proved, the commissioner shall hear the evidence relative to the right in controversy, and shall, as far as possible, ascertain the rights of the absent parties not served where notice as provided shall have been published. He may, if deemed desirable, or conclusive to the rendering of a correct decision, visit the locality where the controversy arose. He shall give such decision as may in each particular case appear to be in conformity with vested rights, and shall be just and equitable between the parties.[1] The decision shall state expressly the findings of fact on the evidence, and shall, in cases of right of way, clearly indicate the location and nature of the way; if on a water right, it shall state the proportion or time for use, and any other things necessary to the right. It may also regulate the methods by which the water may be obtained, and by which its supply can be controlled. All the testimony and the decision shall be recorded in books of record to be kept and preserved by the commissioner. The said books, when filled, shall be deposited with the clerks of the respective courts.

"The decisions of the several commissioners shall be final and binding upon all parties except those who may be absent from the

1 That the commissioner's decision must be in accordance with vested rights, and shall be just and equitable, see Calaca v. Caldeira, 13 Hawn. 214; Palolo etc. Co. v. Wong Quai, 15 Hawn. 554; Achi v. Poni, 5 Hawn. 176; Davis v. Afong, 5 Hawn. 216; Wailuku Sugar Co. v. Widemann, 6 Hawn. 185; Hawaiian Sugar Co. v. Waikulu Sugar Co., 14 Hawn. 50; *Id.*, 15 Hawn. 675.

That it must be responsive to prayer, see Kohala Sugar Co. v. Wight, 11 Hawn. 645.

It must be based upon the pleadings. Un Wo Sang Co. v. Alo, 7 Hawn. 661.

Where irrigation water was originally apportioned by time only, to change the allotment by time to a new system of apportionment by extent of land is to change the water rights themselves. Wilfong v. Bailey, 3 Hawn. 479.

It must be in accordance with the evidence. Liluokalani v. Pang Sam, 5 Hawn. 13; Maikai v. Hastings, 5 Hawn. 133; Wailuku Sugar Co. v. Widemann, 6 Hawn. 185; Mele v. Ahuna, 6 Hawn. 346; Kahookiekie v. Keanini, 6 Hawn. 310; Ing Choi v. Ung Sing, 8 Hawn. 498; Chun Lai v. Mang Young, 10 Hawn. 133; Kaleiopu v. Booth, 10 Hawn. 453; Kohala Sugar Co. v. Wight, 11 Hawn. 645; Loo Chit Sam v. Wong Kim, 5 Hawn. 200; Long v. Wai Fong, 9 Hawn. 628.

A judgment by the water commissioners signed by only one of them is void. Maikai v. Hastings, 5 Hawn. 1, 133.

Territory during the whole time of the pendency of such suit, subject to the right of appeal."[2]

The costs may, in the discretion of the commissioner, be divided or taxed to the losing party. In case of appeal the final award as to costs shall abide the decision of the court.[3]

§ 1814. **The adjudication of water rights—Appeal.**—Any party aggrieved by the decision of the commissioner may appeal therefrom to the Circuit Court within ten days from the rendition of the decision, and within said period shall pay all costs accrued and for certificate and record on appeal, and shall deposit with the commissioner a good and sufficient bond to the clerk of the court in the sum of $100, conditioned for the payment of costs further to accrue in case of defeat. In case of appeal the commissioner shall promptly transmit to the clerk of the court a copy of the record, together with any exhibits filed, the bond for costs, and all costs not strictly retainable by him or actually disbursed. The Court may permit the introduction of new evidence which could not with due diligence have been obtained before, and its decision shall be final and binding, except as aforesaid.[1] The right of appeal from the judgment of the Circuit Court is also given, under the regular mode of procedure, to the Supreme Court of the Territory. And the Supreme Court on appeal is authorized to render such a decision as shall be just and equitable between the parties.[2]

§ 1815. **Artesian wells of the Island of Oahu.**—By Act of the legislature of 1884,[1] applicable only to the Island of Oahu, it was provided that every flowing artesian well on the island shall be capped by the owner or owners thereof in such a manner as to give complete control over the flow of the water from the pipe of such

2 Rev. Laws, 1905, Sec. 2202.

3 Rev. Laws, 1905, Sec. 2203.

Chun Lai v. Mang Young, 10 Hawn. 133.

1 Rev. Laws, 1905, Sec. 2204.

The court has only appellate jurisdiction from a decision of the commissioners, and will not on appeal complete a decision which was never made. Loo Chit Sam v. Wong Kim, 5 Hawn. 130.

See, also, on questions on appeal, Kaanaana v. Richardson, 5 Hawn. 235; Cha Fook v. Lau Piu, 10 Hawn. 308.

2 Lonoaea v. Wailuku Sugar Co., 9 Hawn. 651; Horner v. Kumuliilii, 10 Hawn. 174.

1 Rev. Laws, 1905, Secs. 3197-3200; Laws, 1884, Chap. 49.

well. No person having the right to the use of water from any such artesian well shall allow the same to run to waste, but may use it for irrigation, domestic, and other useful purposes, except for driving machinery; provided, however, that such water may be used for driving machinery in case it can be utilized afterward for irrigation or other useful purposes.

Any person violating the provisions of the Act shall, upon conviction thereof, be fined not more than fifty dollars. For the more effectual carrying out the provisions of the Act, the high sheriff of the Territory and all policemen of the Island of Oahu may at all times of night or day enter without warrant any premises whereon artesian water is used.

§ 1816. **Riparian rights in Hawaiian Islands.**—It can be said that the common law of riparian rights is in force in the Hawaiian Islands, or such of them as have not been lost by grant or prescription. The common law of England has been adopted by express statutory enactment. The Supreme Court of the then Kingdom in 1867 rendered a decision to the effect that a riparian proprietor has a right, as an incident to his estate, to use the water for irrigation and domestic purposes, provided he does not materially diminish the supply of water or prevent its like application by others on the same stream, but that his superior rights are subject to prescription by others.[1] There is no statute or decision which has abrogated the statute adopting the common law; there is also no decision which has overruled the above decision referred to.[2]

1 Peck v. Bailey, 8 Hawn. 658.

§ 1817. **Particular features of the State.**—The State of Idaho lies within the very heart of the Rocky Mountain region. The topography of the State, in its broad features, consists of a great range of mountains, extending in a northwesterly and southeasterly direction, and from which main range spurs of smaller ranges run. These mountain ranges are interspersed with valleys of greater or less extent. The greater portion of the State lies well within the arid region; however, the northern part, adjacent to Canada, ex-

tends into a comparatively humid region, this portion having a rainfall of twenty inches or more per annum. A portion of the State adjacent to Utah lies within the Great Basin, the waters from which flow into Great Salt Lake. The great drainage basin of the State is that of the Snake River and its tributaries. This river has its source in the Yellowstone National Park, and flows entirely across the State, and finally empties into the Columbia. The Snake Valley may be described as a broad, lava-covered plain, and naturally covered with a dense growth of sagebrush and similar woody shrubs. The surface is composed of a soil of volcanic origin, which, when irrigated, possesses wonderful fertility. In the central portion of the State are vast fields of lava, covered in places by a thin, sandy soil, which is also highly productive when watered. The water supply of the State is large, but in some places attended with great difficulties, as far as its utilization is concerned, from the fact that it is far below the lands upon which it might be used. The altitude in the State is a most important factor in determining the temperature or rainfall conditions. As a general rule, one finds lower temperatures and heavier precipitation as the altitude increases. In the mountains the climate is characterized by cold, snowy winters and cool, short summers. Somewhat warmer than the mountainous regions are the extensive plateaus and higher valleys that form a large part of the central portions of the State. In the Snake River Basin the climate is characterized by moderately cold winters and moderately warm summers. Here the staple grains and fruits grow in abundance, and there is little danger of the fruit being winter-killed, although at times protection has to be had from spring frosts. In very few instances has any great loss resulted when protective measures have been thoroughly and intelligently resorted to. As has been stated, the precipitation varies with the altitude. It is the greatest in the northern part of the State, varying from thirty-five to twenty-five inches annually. The driest part of the State is to be found along the Snake River, from below Shoshone Falls nearly to the western boundary. Throughout the northern and western portions of the State the prevailing winds coming from the warm regions of the Pacific Ocean have their influence upon the climate. The most of the precipitation occurring during the winter months, the result is that over the greater portion of the State the summer rainfall is not sufficient to permit successful farming without irrigation.

But the irrigable lands are boundless, with water sufficient to irrigate a large portion of the same, when properly developed.[1]

§ 1818. **Irrigation in the State.**—During the last fifteen years the State of Idaho has taken greater strides and made greater gains in the actual construction of irrigation works and in the reclamation and settlement of arid lands than almost any other State of the Union. It was this work by the State, private corporations, and by the National Government that largely contributed to the increase in the population of the State during the last decade of 102 per cent. There being a large supply of water in the State and an almost boundless amount of fertile lands upon which it can be applied, extensive irrigation projects have sprung up in many portions of the State and especially is this true along the Snake River and its tributaries.

Especially has the State gone far ahead in the reclamation of its lands under the Carey Act. At the present time projects completed, in process of construction, or financed contemplate the irrigation of almost two million acres. According to the last report of the State Engineer of the State there are forty-six of these projects, either completed and the water actually being used thereunder or in various stages of construction. And as the result of these enterprises the State Engineer says: "Although minor mistakes may have occurred, as might be expected in connection with irrigation development on so mammoth a scale, yet such mistakes are dwarfed into insignificance in contemplation of the incalculable benefit accruing to the State of Idaho by reason of a State policy, which makes pos-

sible the final reclamation of the ultimate acre of land available for reclamation."[1]

The General Government has also been active in the State of Idaho in constructing works for the reclamation of arid lands, under the National Reclamation Act.[2] The Minidoka project is largely constructed, the Payette-Boise project and the Dubois project are in the process of construction, while other projects are contemplated.[3]

Again, under the State Irrigation District law, the State Engineer reports the organization and active operation of nineteen districts.[4] And, as a general thing, these irrigation districts appear to be in a prosperous condition.

Besides the operation under these Acts, there are many private enterprises by corporations and individuals which have been projected, many of which have been carried through to completion and are now in active operation. And as the direct result of this work many settlers are making Idaho their homes, cities and towns are springing up, and the welfare of the State is prospering to a most wonderful degree. And during the next decade the State will continue to prosper, even to a greater degree than it did in the last.

According to the United States census report for 1910, the total acreage under irrigation in the State of Idaho in 1909 was 1,430,848 acres, against 608,718 acres in 1899 and 217,005 acres in 1889. The percentage of increase from 1889 to 1899 was 180.5 per cent and from 1899 to 1909 was 135.1 per cent. The absolute increase during the latter decade was 822,130 acres, and that between 1889 and 1899 was 391,713 acres.

The above irrigated area is divided into 16,439 farms, as against 9,188 farms in 1900, an increase in the number of farms of 7,251, or

3 For a description of these projects, see Fourth Annual Report of the Reclamation Service, 1904-1905, pp. 128-167; Fifth Annual Report, 1906, pp. 115-136; Eighth Annual Report, 1908-1909, pp. 70-84.

Report of the State Engineer of Idaho, 1909-1910, pp. 188-192.

4 For a full description of these districts, see Report of the State Engineer, 1909-1910, pp. 271-288.

78.9 per cent. The census further shows that in 1910 there were existing enterprises ready to supply water to 958,111 acres, not irrigated in 1909, or, in other words, the acreage that enterprises already constructed were capable of irrigating in 1910 was 2,388,959 acres and the acreage included in enterprises completed or under construction in 1910 is given as 3,549,573 acres. This acreage represents the area which will be available for the extension of irrigation within the next few years, upon the completion of the projects now under construction. It indicates in a general way the area available for settlement, although much of this unirrigated land is in farms already settled.

The acreage irrigated in 1909, classified by the character of the enterprise, is as follows: 47,500 acres under the United States Reclamation Service, 3,426 under the United States Indian Service, 162,418 under the Carey Act projects, 140,930 included in irrigation districts, 628,102 under co-operative enterprises, 44,872 under commercial enterprises, and 403,600 acres in individual and partnership enterprises.

§ 1819. **Criticism of the Idaho laws.**—The laws of the State of Idaho governing and controlling the waters within its jurisdiction are numerous and cover the various phases of the subject. It has evidently been the policy of the legislature to enact every law that would tend toward the reclamation of the arid lands within the State. Over all these systems of laws, there is also a wise policy of State control, so that the rights of the investing public, the State at large, and the settlers are fully protected. The settler coming into the State to make it his home may have his choice of the system of law which he may prefer to govern and protect his rights. He may settle under one of the many Carey projects and his rights may be governed and protected under the laws for its operation. Again, if he prefers, he may settle in one of the many irrigation districts; or, again, under one of the reclamation projects of the Government. Or, again, if he can find unappropriated water in any part of the State he may work alone and appropriate sufficient water for his actual beneficial use. But, whichever system he chooses, he may depend upon it that there are laws which will fully protect his rights. As to the wisdom of the legislature in enacting these laws,

we can only point to their results, as discussed in the previous section.[1]

The physical conditions of the different States require different laws governing the subject of waters. The legislature has met those conditions in the State of Idaho fairly and squarely, and when we wrote the first edition of this work we had occasion to state that "Idaho has not kept up with the majority of the other States in the arid region in her legislation upon the subject of irrigation," and suggested that new laws should be enacted, we can not say that today. The State of Idaho has a system of statutory laws governing the subject of waters and irrigation second to no State in the West.

§ 1820. **State constitutional provisions.**—The State of Idaho probably has more constitutional provisions upon the subject of water and water rights than any other State of the Union; and, as these provisions are the foundation of all legislative enactments, we will quote them in full.

In Article 15 it is provided:

"Sec. 1. The use of all waters now appropriated, or that may hereafter be appropriated for sale, rental, or distribution; also all the water originally appropriated for private use but which after such appropriation has heretofore been, or may hereafter be sold, rented, or distributed, is hereby declared to be a public use and subject to the regulation and control of the State in the manner prescribed by law.[1]

"Sec. 2. The right to collect rates or compensation for the use of water supplied to any county, city, or town, or water district, or the inhabitants thereof, is a franchise and can not be exercised except by authority of and in the manner prescribed by law.[2]

1 See Sec. 1818.

1 For the construction of the above, see Wilterding v. Green, 4 Idaho 773, 45 Pac. Rep. 134; Boise etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25; Hill v. Standard Min. Co., 12 Idaho 223, 85 Pac. Rep. 907; Bardsly v. Boise etc. Co., 8 Idaho 155, 67 Pac. Rep. 428; Boise etc. Co. v. Boise City, 123 Fed. Rep. 232, 59 C. C. A. 236; Hatch v. Consumers' etc. Co., 17 Idaho 204, 104 Pac. Rep. 670; Green v. Byers, 16 Idaho 178, 101 Pac. Rep. 79; Brose, v. Board of Directors of Nampa & Meridan Irr. Dist., 20 Idaho 281, 118 Pac. Rep. 504; Pocatello v. Murray, —— Idaho ——, 120 Pac. Rep. 812. See, also, Walbridge v. Robinson, —— Idaho ——, 125 Pac. Rep. 812.

2 See Wilterding v. Green, 4 Idaho 773, 45 Pac. Rep. 134; Boise City v.

"Sec. 3. The right to divert and appropriate the unappropriated waters of any natural stream to beneficial uses shall never be denied. Priority of appropriation shall give the better right as between those using the water; but when the waters of any natural stream are not sufficient for the service of all those desiring the use of the same, those using the waters for domestic purposes shall (subject to such limitations as may be prescribed by law) have the preference over those claiming for any other purpose; and those using the water for agricultural purposes shall have preference over those using the same for manufacturing purposes. And in any organized mining district, those using the water for mining purposes, or milling purposes connected with mining, shall have preference over those using the same for manufacturing or agricultural purposes. But the usage by such subsequent appropriators shall be subject to such provisions of law regulating the taking of private property for public or private use as are referred to in Section 14 of Article I of this constitution.[3]

"Sec. 4. Whenever any waters shall have been, or shall be, appropriated or used for agricultural purposes, under a sale, rental, or distribution thereof, such sale, rental, or distribution shall be deemed an exclusive dedication to such use; and whenever such water so dedicated shall have once been sold, rented, or distributed to any person who has settled upon or improved land for agricultural purposes, with the view of receiving the benefit of such water under such dedication, such person, his heirs, executors, administrators, successors, or assigns, shall not thereafter, without his consent, be deprived of the annual use of the same, when needed for domestic purposes, or to irrigate the land so settled upon or improved, upon payment therefor, and compliance with such equitable terms and conditions as to the quantity used and the times of use, as may be prescribed by law.[4]

Artesian etc. Co., 4 Idaho 351, 39 Pac. Rep. 562.

"Sec. 5. Whenever more than one person has settled upon, or improved land with a view to receiving water for agricultural purposes, under a sale, rental, or distribution thereof, as in the last preceding section of this article provided, as among such persons priority in time shall give superiority of right to the use of such water in the numerical order of such settlements or improvements; but whenever the supply of such water shall not be sufficient to meet the demands of all those desiring to use the same, such priority of right shall be subject to such reasonable limitations as to the quantity of water used and times of use as the legislature, having due regard both to such priority of right and the necessities of those subsequent in time of settlement or improvement may by law prescribe.[5]

"Sec. 6. The legislature shall provide by law the manner in which reasonable maximum rates may be established to be charged for the use of water sold, rented, or distributed for any useful or beneficial purpose."[6]

The right of eminent domain is provided for in Article I as follows:

"Sec. 14. The necessary use of lands for the construction of reservoirs or storage basins, for the purpose of irrigation, or for the rights of way for the construction of canals, ditches, flumes, or pipes to convey water to the place of use, for any useful, beneficial, or necessary purpose, or for drainage; or for the drainage of mines, or the working thereof, by means of roads, railroads, tramways, cuts, tunnels, shafts, hoisting works, dumps, or other necessary means to their complete development, or any other use necessary to the complete development of the material resources of the State, or the preservation of the health of its inhabitants, is hereby de-

clared to be a public use and subject to the regulation and control of the State.

"Private property may be taken for public use, but not until a just compensation, to be ascertained in a manner prescribed by law, shall be paid therefor." [7]

And by Article II it is further provided:

"Sec. 8. The right of eminent domain shall never be abridged, nor so construed as to prevent the legislature from taking the property and franchise of incorporated companies, and subjecting them to public use, the same as property of individuals; and the police powers of the State shall never be abridged nor so construed as to permit corporations to conduct their business in such a manner as to infringe the equal rights of individuals, or the general well being of the State."

§ 1821. **Water rights—Defined—Nature of property in water—Standard of measurement.**—The nature of property in water within the State of Idaho is defined as follows:

"Water being essential to the industrial prosperity of the State, and all agricultural development throughout the greater portion of the State depending upon its just apportionment to and economical use by those making a beneficial application of the same, its control shall be by the State, which, in providing for its use, shall equally guard all the various interests involved. All the waters of the State, when flowing in their natural channels, including the waters of all natural springs and lakes within the boundaries of the State, are declared to be the property of the State, whose duty it shall be to supervise their appropriation and allotment to those diverting the same for any beneficial purpose, and the right to the use of any of the waters of the State for useful or beneficial purposes is recognized and confirmed; and the right to the use of any of the public waters which have heretofore been or may hereafter be allotted or beneficially applied, shall not be considered as being a property right in itself, but such right shall become the complement of, or one of

[7] See Idaho etc. Co. v. Oregon etc. R. Co., 8 Idaho 175, 67 Pac. Rep. 318; Baillie v. Larson, 138 Fed. Rep. 177; Potlatch etc. Co. v. Peterson, 12 Idaho 769, 88 Pac. Rep. 426, 11 Am. the appurtenances of, the land or other thing to which, through necessity, said water is being applied; and the right to continue the use of any such water shall never be denied or prevented from any other cause than the failure on the part of the user thereof to pay the ordinary charges or assessments which may be made to cover the expenses for the delivery of such water."[1]

The right to the use of the waters of rivers, streams, lakes, springs, and of subterranean waters may be acquired by appropriation. The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successor in interest ceases to use it for such purpose, the right ceases.[2] As between appropriators, the first in time is the first in right.[3] Ditches for the utilization of seepage, waste, or spring waters shall be governed by the same law relative to priority.[4]

The water appropriated may be turned into the channel of another stream and mingled with its water and then reclaimed; but in reclaiming the water so mingled or diverting the water in lieu

thereof, the amount to which the prior appropriators may be entitled shall not be diminished, and due allowance shall be made for loss by evaporation and seepage.[5] The point of diversion may be changed if the prior rights of others are not injured thereby, but not otherwise.[6]

"A cubic foot of water per second of time shall be the legal standard for the measurement of water in this State, and it shall be the duty of the State engineer to devise a simple, uniform system for the measurement and distribution of water."[7] Such measurement shall be at the point of diversion.[8]

The phrase, "domestic purposes," shall be construed to include water for household purposes, and a sufficient amount for the use of domestic animals kept with and for the use of the household.[9]

By completion of an appropriation is meant conducting the waters to the place of intended use.[10]

"All persons, companies, and corporations owning or claiming any lands situated on the banks or in the vicinity of any stream are entitled to the use of the waters of such stream for the purpose of irrigating the land so held or claimed."[11]

**§ 1822. Administrative officers—State board of irrigation.**—There is also constituted a State board of irrigation, composed of the State engineer and the water commissioners of the three water divisions of the State. The State engineer is *ex officio* president of the board. The meetings of the board may be held in any part of the State, which may be selected by the State engineer. The board shall provide rules and regulations in relation to the making of

In the dissenting opinion in Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541, Mr. Justice Berry cited the above section in support of the application of the doctrine of riparian rights to the irrigation law, but the majority of the Court, without citing this section, declared in effect that the doctrine of riparian rights has no place in the jurisprudence of the State.

final proof of the completion of the construction of works, and such other rules relative to the appropriation and the distribution of water in accordance with the priorities of the rights of the users thereof as may be necessary.[1]

§ 1823. **Administrative officers — State engineer, his powers and duties.**—Under the laws of State control [1] the State of Idaho has a full complement of administrative officers, and chief among these is the State engineer, who is to be appointed by the Governor, and to receive a salary of $3600.[2] His duties as prescribed by the statute are similar to those of other State engineers.[3] He must also collect facts and make surveys to ascertain suitable locations for reservoirs, make stream measurements and keep a record of the same; he must examine the plans of all dams of more than ten feet in height and approve or reject the same; must inspect all dams after construction, and, if the same are found unsafe, order the repair of the same. He shall also, free of charge, give any information desired by any person as to the proper method of measuring water, or the construction of measuring apparatus; and shall give special instructions to all water masters as to the measurement of waters so as to secure a just distribution thereof.[4] He must also examine and report on the plans of proposed irrigation districts and projects under the Carey Act.[5] He has the supervision of the water commissioners,[6] and all applications for the appropriation of waters must be made to him, and he must issue all permits therefor.[7] Besides this, he must perform all duties of a professional nature which naturally appertain to his office or which are requested by the Governor; and he must also prepare all maps required for use by the State board of land commissioners. The State engineer is also *ex officio* president of the State board of irrigation.[8] He must make and render to the Governor, biennially, or oftener, if required, a full and true report of his work performed by virtue of his office, which report shall contain any recommendations he may have in

reference to legislation affecting his office, or in reference to matters in interest in regard to irrigation that his experience and information may cause him to make.[9]

§ 1824. **State administrative officers—Water divisions—Water commissioners and their powers and duties.**—The State of Idaho is divided by statute into three water divisions.[1] One water commissioner for each of such water divisions is appointed by the Governor. Such water commissioners shall possess such theoretical knowledge of the science of hydraulics as will enable them to supervise the construction of measuring devices for the proper measuring of water. The commissioner of each water division shall have immediate direction and control of the water masters, and of the distribution of the water, and shall perform such other duties as shall devolve upon him as a member of the board of irrigation. He shall also perform such other duties as may be directed by the State engineer; he shall also receive proof of the beneficial use of the waters in his division. The salary of each water commissioner is fixed at $2000.[2]

The water commissioners shall, on or before the first day of December of each year, submit to the State engineer a report of the work done by them in their districts, and shall recommend such changes in the irrigation laws and rules and regulations governing the diversion of waters as would, in their judgment, be beneficial to the people of the State.[3]

§ 1825. **State administrative officers—Water districts—Water masters and their powers and duties.**—The board of irrigation shall divide the State into water districts in such a manner that each public stream and tributary, or independent source of water supply, shall constitute a water district. But when the distance between extreme points of diversion therein is more than forty miles, a stream may be divided into two or more districts. Any tributary may also be constituted into a separate district.[1]

1 Rev. Codes, 1908, Secs. 3274, 3275, as amended by Laws, 1909, p. 327.

The superintendents or water masters are elected by the water users of the ditch or canals. If they can not agree as to who shall serve in this capacity, the judge of the District Court upon petition is given authority to make such appointment. The water master shall receive such compensation as the Court may fix.[2]

It is made the duty of the water masters to distribute the waters of the public streams, or water supply, comprising his district among the several ditches taking water therefrom according to the prior rights of each respectively. Unadjudicated rights to be subsequent to adjudicated rights in such distribution.[3] He shall begin his work only when two or more owners, by application in writing, state that there is a necessity for the use and control of such waters in the district, and he shall not continue after the necessity therefor shall cease. He shall have the power in case of necessity to employ assistants.[4] The pay for the services of the water master and his assistants shall be a charge against the land of the users to which the water was so delivered, a statement of which must be rendered as provided to the board of county commissioners, and collected along with the other taxes of the users.[5]

All water masters shall make reports to the water commissioner of their division as often as may be deemed necessary by said commissioner. The reports must contain the amount of water necessary to supply all the ditches, canals, and reservoirs in the district, the amount of water actually coming into the district to supply such works, what works are without their proper supply, and the probability of future supply. The reports of water masters to the water commissioners shall be filed and kept in the office of the State engineer.[6]

§ 1826. **Headgates and measuring devices.**—The appropriator of any of the waters of the State shall maintain, to the satisfaction of the water commissioner of the district a substantial headgate at the point where the water is diverted, which shall be of such construction that it can be kept locked by the water master; and the

2 Rev. Codes, 1908, Sec. 3284, as amended by Laws, 1909, p. 105.

5 Rev. Codes, 1908, Secs. 3280, 3281.

6 Rev. Codes, 1908, Sec. 3276.

appropriator shall also construct a rating flume or other measuring device as near the head of such ditch as practicable. If such device is not constructed by the owner, the water commissioner may construct the same, at the expense of the county, and if the owner refuses or neglects to pay the charge therefor, the water commissioner shall cause the headgate of such ditch to be closed and locked, and remain closed until such charges shall be paid.[1]

Any person, association, or corporation delivering water under any fixed or annual charge, shall also provide the necessary headgates and measuring devices so as to measure the quantity of water delivered to any consumer.[2]

§ 1827. **The appropriation of water.**—All appropriations of water must be made in conformity with the law of State control in the State of Idaho, a subject which has been largely discussed in a preceding chapter of this work.[1]

It is provided that all rights to divert and use the waters of the State for beneficial purposes shall hereafter be acquired and confirmed under the provisions of the statute.[2] The application to appropriate must be made to the State engineer, in the usual form.[3] And it is made the duty of the State engineer "to approve all applications made in proper form which contemplate the application of water to a beneficial use." The approval of the application must be endorsed thereon and so approved. The application constitutes a permit to proceed with the construction of the works. But under the Act of 1911 [4] the State engineer is prohibited from issuing permits to appropriate water from any lake not exceeding five acres, pond, pool, or spring, which is located wholly upon the lands of another, except to the one owning such lands, or with his written permission.[5]

4 Laws, 1911, p. 782.

5 Youngs v. Regan, 20 Idaho 275, 118 Pac. Rep. 499; King v. Chamberlin, 20 Idaho 504, 118 Pac. Rep. 1099; Gard v. Thompson, —— Idaho ——, 123 Pac. Rep. 497; Nielson v. Parker, 19 Idaho 727, 115 Pac. Rep. 488;

The engineer must require that the construction be completed within five years, but he may limit the period to a less time. When so limited an extension of time may be granted, provided that it can not be extended for longer than the five years set by the statute. He must also fix a date when the water must be applied. An appeal from the endorsement may be had to the District Court. The work must be prosecuted diligently and uninterruptedly to completion. A bond must be filed by the applicant, conditioned upon the faithful carrying to completion the works of diversion as specified in the permit.[6]

On or before the date set for the completion of the works proof of such completion must be made to the State engineer, in the manner as provided by the statute.[7] An examination must be made by the State engineer, and if the works are found to comply with the law, he shall issue a certificate to the holder of such permit or his assigns, which certificate shall contain the name of the holder, the number of the permit, the date of application, the address of the holder, the condition of such works, the purpose of appropriation, the quantity of water which can be diverted by the works and conducted to the place of use, a description of the lands to be irrigated.[8] Within the time set for the application of the water to the beneficial use further proof must be made of such actual application.[9] And upon the receipt by the State engineer of such final proof he shall issue a license to such user or users confirming such use. All licenses which relate to the same permit shall bear the same date of priority, shall be numbered alike, and all rights relating to the same source of supply shall be numbered numerically in the order of the priority of such rights. Such license shall be binding upon the

Marshall v. Niagara etc. Co., decided by the Supreme Court of Idaho on June 8, 1912.

6 Rev. Codes, 1908, Sec. 3254; as amended, Laws, 1911, Chap. 64, p. 184.

For permits and their cancellation, see Speer v. Stephenson, 16 Idaho 707, 102 Pac. Rep. 365; Josslyn v. Daly, 15 Idaho 137, 96 Pac. Rep. 568; Idaho etc. Co. v. Stephenson, 16 Idaho 418, 101 Pac. Rep. 821; Lockwood v. Freeman, 15 Idaho 395, 98 Pac. Rep. 295, holding that vested rights to the use of water can not be taken away, and the right to the use of such water granted to a subsequent locator by the State engineer.

See, also, Boise etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 321.

8 Rev. Codes, 1908, Sec. 3258.

See, also, Boise etc. Co. v. Stewart, *supra*.

9 Rev. Codes, 1908, Sec. 3260.

State and shall be *prima facie* evidence as to such right.[10] Non-use of the water under any license constitutes an abandonment: Provided, that any person owning land to which water has been appurtenant may transfer the use of the water to other land upon making the proper application to the State engineer and obtaining his approval to the same.[11]

Protests may be made against the issuance of any license to the State engineer, and an appeal may be had from his decision to the District Court.[12]

By the Act approved March 11, 1909,[13] special proceedings are provided for the cancellation of permits to appropriate water where there has been a failure of the applicant to comply with the requirements of his permit. It must be upon a petition to the State engineer, and a hearing must be had by him, and any decision rendered by the engineer may be appealed to the District Court; or the complainant may elect to bring his action in the first instance in the District Court.

§ 1828. **The adjudication of existing rights.**—The adjudication of existing water rights in the State of Idaho, in the first instance, unlike the States of Wyoming and Nevada, is by the District Court.[1]

Whenever such an action is filed in the District Court and before such adjudication is made, the judge of such court shall request the State engineer to make an examination of such stream and the canals and ditches diverting water therefrom, and of all the land irrigated thereby, and the lands susceptible of reclamation. He shall also prepare a map and plat and a statement of the conditions, which map and statement shall be accepted as evidence in the determination of such rights by the Court, the cost of such map and statement to be apportioned among the claimants and parties to the suit.[2]

After a hearing in such an action, in allotting the waters of any

10 Rev. Codes, 1908, Secs. 3261, 3262.

1 For the determination of existing water rights in Wyoming and Nevada, see Secs. 2111-2114.

2 Rev. Codes, 1908, Sec. 4620; Boise etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 321.

See, also, Bear Lake County v. Budge, 9 Idaho 703, 75 Pac. Rep. 614, 108 Am. St. Rep. 179; Le Quime v. Chambers, 15 Idaho 405, 98 Pac. Rep. 415; Lockwood v. Freeman, 15 Idaho

stream by the Court according to the rights and priorities of those using such water, such allotment shall be made to the use to which such water is beneficially applied, and when such water is used for irrigation the right confirmed by such decree shall be appurtenant to and shall become a part of the land which is irrigated by such water. In the case of works capable of diverting more water than is applied to a beneficial use at the time of such adjudication, the right only to the water beneficially applied at the time of making such allotment shall be confirmed by the Court, and the Court shall further ascertain the amount of water which can be diverted through such works in excess of such quantity beneficially applied, and shall set a time when such amount shall be applied to the beneficial purpose for which it is intended, which time shall not exceed four years from the date of the decree, and before the expiration of the time set proof of such application must be made.[3]

It is then made the duty of the clerk of the court to prepare and transmit to the State engineer a certified copy of the allotments made, which must be recorded in the office of the State engineer. The engineer shall then send a copy of such allotments to each of the water commissioners. The water commissioners must then have such allotments printed in pamphlet form and supply each water user with a copy of the same.[4]

By the recent Act approved March 13, 1911,[5] it is provided that where the priority of the rights of any stream, canal, or reservoir shall have been determined by the Court, and thereafter it shall appear that any person or corporation having the right to the use of any of the water was not included in the decree, or that any person who subsequently thereto has acquired any right to the use of such waters, such person may bring an action in the proper District Court against the water master having in charge the distribution of the water, or against the water commissioners of the district. Such party shall in his complaint set out his own right, and he shall further set forth his acceptance as binding upon him of the said decree and the findings of fact and conclusions of law upon which it is based. Summons must issue and be served; also a notice must be

published of the action and the claim set up. Any party interested may appear and defend. The Court, by its decree in said action, shall determine the right of the plaintiff, but subject to the terms of the original decree.

§ 1829. **Reservoir rights.**—The right of the owners of reservoirs to use the beds of streams is also given by the Act approved March 13, 1909.[1] The Act also provides for the appointment of a special deputy to supervise the use of reservoir waters in such a manner that those having the right in their use shall secure the volume to which they are entitled.

It is also made a misdemeanor for any one to unlawfully interfere with the headgates along the stream adjusted by such deputy, in such a manner as to misappropriate any of the waters to which he is not entitled.[2]

§ 1830. **Fixing water rates.**—The county commissioners of each county are empowered, at their regular session in January of each year, to hear and consider all applications of parties interested either in the furnishing or the using of water for hire, and proceed to fix a maximum compensation for the waters thereafter to be delivered to consumers from such works. A date for the hearing of the same must be set and notice to all parties interested must be given. At such hearing proof may be taken of the present value of such works, as well as the cost of operating and maintaining the same, and all matters which may affect the establishment of reasonable maximum rates. "Upon hearing and considering all the evidence and facts and matters involved in the case, said board of county commissioners shall enter an order describing the ditch, canal, or conduit, or other water works in question, with sufficient certainty and fixing a just and reasonable maximum rate of compensation for water thereafter delivered from such ditch or other works as last aforesaid, within the county in which such commissioners act; and such rate shall not be changed within one year from the time when such rate shall be so fixed: *Provided*, that an appeal may be taken to the District Court from any act, order, or proceed-

[1] Laws, 1909, p. 151. The above Act is similar to that of Wyoming. See Sec. 2128.

ings of the board by any person or corporation aggrieved thereby, as in other cases under the general statute of the State of Idaho governing appeals from an order or proceeding of the board of county commissioners."[1]

Full provisions are also made for the fixing of the maximum water rates which may be charged by companies furnishing cities or towns. Said rates to be fixed by commissioners, two of which shall be selected by the city or town authorities, or if there be none such, then by the county commissioners, and two to be selected by the taxpayers of such town or city.[2]

§ 1831. **Rights of way—Condemnation proceedings.**—A right of way for ditches, canals, or other works is given over the lands of others and over the lands of the State; provided, that no property shall be taken for such purpose until just compensation shall be paid therefor, to be ascertained in the manner prescribed by law for the taking of private property for a public use.[1] Rights of way are also given over other ditches or canals, and the person seeking such right of way shall be liable for all damages that may accrue from crossing the works of another.[2]

The uses for which property may be taken[3] and the property which may be taken are fully set forth in the statute.[4] Before

any property can be taken it must appear: That the use to which it is to be applied is a use authorized by law; that the taking is necessary to such use; if already appropriated to some public use, that the public use to which it is to be applied is a more necessary public use.[5] An accurate survey of the property proposed to be taken may be made without incurring damage, and such property must be located in the manner which will be most compatible with the greatest public good and the least private injury.[6]

For all proceedings of this nature, jurisdiction is conferred upon the District Court of the proper county, and the proceedings prescribed by the statute must be strictly followed.[7] The damages for such taking may be assessed by the Court, a jury, or a referee, and shall be deemed to have accrued at the date of the summons, and the actual value of the property at that date shall be the measure of compensation.[8] The damages must be paid within thirty days after judgment, and execution may issue therefor, and if the money can not be made on execution, the Court may annul the entire proceedings. In the details of the proceedings the California code is largely followed, heretofore discussed.[9]

Rights of way for ditches and reservoirs are granted to any persons desiring to construct the same over or upon any of the lands owned or controlled by the State upon an application duly made therefor to the State board of land commissioners, and approved by it. Payment must be made therefor as may be deemed reasonable of not less than $10 per acre. All lands thereafter sold for such rights of way must be marked on the plats.[10]

§ 1832. **Liability for injuries.**—Upon the question of injuries it is provided: "That in the making, constructing, keeping up, and maintenance of such ditch, canal, or conduit through the lands of

others the person, company, or corporation proceeding under this section, and those succeeding to the interests of such person, company, or corporation must keep such ditch, canal, or other conduit in good repair, and are liable to the owners or claimants of the lands crossed by such work or aqueduct for all damages occasioned by the overflow thereof, or resulting from any neglect or accident (unless the same be unavoidable) to such ditch or aqueduct."[1]

§ 1833. **Maintenance and repair of works.**—All ditches, canals, or other works must be kept in good repair by the owner thereof in order that such owner may furnish its consumers with water for the purpose of irrigation from the first day of April to the first day of November of each year, and to prevent the wasting of water and the incurring of damage to others.[1] All ditches and canals must be bridged where the same cross roads.[2] Where a ditch is common property, the water master of the district may make a *pro rata* assessment against the users according to the benefits received; and if any person refuses for the period of three days after notice to pay the same, the water master may bring an action in his own name for the same.[3] Any lateral ditch may be changed to another location if the rights of others are not injured.[4]

§ 1834. **Corporations—General powers and duties—Statements.**—It is made the duty of any corporation owning or controlling any canal or irrigation works for the distribution of water for sale or rental to file, before the first Monday in January in each year, in the office of the county recorder of every county in which such company distributes water, and a duplicate copy thereof with the State engineer, a full statement showing the condition of the business of said corporation on December 31 of the preceding year.

Said statement to contain the following: A general description of its property; its cost and estimated present value; total amount and character of all indebtedness; total amount due the company

1 Rev. Codes, 1908, Sec. 3300.

See, also, Arave v. Idaho etc. Co., 5 Idaho 68, 46 Pac. Rep. 1024.

2 Rev. Codes, 1908, Sec. 3310.

It is the duty of the owner of such works to construct bridges. MacCammelly v. Pioneer Irr. Dist., 17 Idaho 415, 105 Pac. Rep. 1076.

3 Rev. Codes, 1908, Sec. 3311.

See, also, Shelby v. Farmers' D. Co., 10 Idaho 723, 80 Pac. Rep. 222.

4 Rev. Codes, 1908, Sec. 3311a.

and from what source; the income of the company during the preceding year and from what sources; the expenditures by the company during the same period and for what purposes; the total area of land watered from its works during the preceding year; the number of acres of land said ditch is susceptible of irrigating; the capacity of its works and the quantity of water carried during the said season as nearly as known; the amounts of recorded appropriations, and the date of each.

The said statement shall be sworn to by the proper official of said corporation. And a failure by the proper official or principal accounting officer for thirty days after notification by the recorder to file such statement renders him guilty of a misdemeanor, and subjects him to a fine of not exceeding $300 and imprisonment in the county jail for not more than six months, or both.[1]

§ 1835. **Corporations—License required before selling water.**—By an Act of 1909 it is provided that all persons, copartnerships, associations, companies, and corporations shall, before selling any water right therein, file with the State engineer a map showing the location of their works and the lands to be reclaimed therefrom, duly certified under oath as true and correct by a licensed engineer, and such other information as may be necessary to enable the State engineer to determine the capacity of such irrigation works and the number of acres which may be irrigated therefrom; and shall also file a duplicate with the register of the State board of land commissioners, together with a petition for a certificate of authority to sell water rights in such works. The register must then forward said petition to the State engineer, who, after an examination of such works, must make a full report thereon. The report of the engineer shall be filed with the board of land commissioners, and said board shall thereupon determine the number of water rights, units or shares of water which may be sold under such system, and the number of acres which may be irrigated therefrom, and the form of contract or deed which shall be given to the purchasers thereof; and the board shall issue to the owners of such works a certificate containing the above facts, which shall be recorded in the office of the county recorder of each county where such rights are sold. All contracts and deeds for the sale of water shall be of the

[1] Rev. Codes, 1908, Sec. 2844.

form so approved, and numbered consecutively. And any pretended deed or contract or other instrument pretending to convey water rights, prior to such filing of the certificate, shall be absolutely null and void, and the persons issuing the same be personally and severally liable for any damages sustained by the purchasers, and be further liable to fine and imprisonment.[1]

Parties constructing irrigation works under the provisions of the Carey or National Reclamation Acts are exempted from the provisions of the Act. Reports of the sale of water rights must be filed annually.[2]

**§ 1836. Corporations—Distribution of water to consumers.**—It is made the duty of all those owning or controlling any ditch, canal, or lateral to appoint a superintendent or water master, whose duty it shall be to measure the water from such ditch to those entitled thereto, according to his or her *pro rata* share. For this purpose headgates and measuring devices must be constructed by such company or owner. Any one or more of the joint users of the water may petition the judge of the District Court for the appointment of a water master, and upon notice to all of the water users such water master may be appointed to so distribute the water, and any person who without the consent of the water master interferes with, shuts off or opens any ditch, gate, or dam, with the intent to divert the water, or who cuts any ditch or the banks thereof, or breaks or destroys any gate or flume, is made liable to any person injured in three times the actual damage sustained in consequence of any such act or wrongful acts.[1]

In the distribution of the water it is provided that when any ditch, canal, or reservoir delivering water to several users has one or more rights or priorities, by reason of the enlargements made from time to time, the right of the lands being irrigated shall be divided into classes, the rights of the first class belonging to those lands reclaimed between the dates of the first and second priorities or rights of such works; rights of the second class belonging to those lands reclaimed between the dates of the second and third priorities; rights of any other class being determined in like manner; "but

1 Laws, 1909, p. 335.

2 Act approved March 13, 1909, Laws, 1909, p. 338.

1 Rev. Codes, 1908, Secs. 3284-3286.

all the rights belonging to the same class shall be equal and subject alike to the regulations of their respective class."[2]

Any person, association, or corporation which may contract to deliver a certain quantity of water to any party or parties shall deliver the same to such party or parties, together with a reasonable and necessary allowance for loss by evaporation and seepage, at some convenient point on the main ditch or other works or on any branch or lateral thereof. Where two or more parties take water from said works, to be conveyed to their respective premises, such parties shall, on or before the first of April of each year, select some person, to be known as the manager of such distributing lateral, to have charge during the succeeding season of the distribution of the water among the parties entitled thereto. It is also made the duty of such person to see that the person or company contracting to furnish the water shall deliver the proper amount; and in case of dispute as to the quantity of water to be delivered by such contracting party, the matter shall be referred to the State engineer for his decision. The consumers must keep their ditches and laterals in good condition for carrying the water; and in case they do not do so, they shall have no cause for damage against the company furnishing the water for the failure to furnish the water. The manager is given the power to require each user of such lateral to contribute his proportion of the amount of labor, material, or money to keep such lateral in proper repair. And in case of default in so doing the manager may employ other labor and sue such consumer for his proportion, including costs and attorney's fees.[3] The amount to be paid by said parties for the delivery of said water may be fixed by contract, or as provided by law, and constitutes a first lien on the land for which the water is furnished. But if the title to said land is in the United States or the State, then the amount shall be a first lien upon any crops which may be raised upon said tract of land, which may be collected as provided by law for other liens. And any mortgage or other lien upon such tracts that may be here-

2 Rev. Codes, 1908, Sec. 3287.

Any classification made by an irrigation company under the provisions of Section 3287 of the Revised Codes can in no way affect and control the question of priorities between users and in no way prohibits or limits any user of water in having the question of priorities between users settled and adjudicated in the proper court of the State. Brose v. Nampa & Meridan Irr. Dist., 20 Idaho 281, 118 Pac. Rep. 504.

3 Laws, 1909, p. 108.

after given shall, in all cases, be subject to the lien for the price of the water.[4]

It is made the statutory duty of any person, company, or corporation owning or controlling any irrigation works for the distribution of water for sale or rental thereof to furnish water to any person or persons owning or controlling any land under such works for the purpose of irrigation or for domestic purposes upon proper demand being made and reasonable security being given for the payment thereof: Provided, that no person or company shall contract to deliver more water than they have title to.[5] Such application must be made on or before the first of January of any year, for the water during the succeeding season, and must also state the quantity of water needed. Preference shall be given to those who used the water during the preceding season. No unreasonable conditions must be imposed by the company as precedent to the delivery of the water. "But no demand for the purchase of a so-called 'perpetual water right' or any contract fixing the annual charges or the quantity of water to be used per acre shall be imposed as a condition precedent to the delivery of water annually as provided in this chapter."[6]

Whenever any waters have been appropriated or used for agricultural or domestic purposes, under a sale or rental thereof, such sale or rental shall be deemed an exclusive dedication to such use, and such consumer, his heirs, executors, administrators, successors, or assigns, shall not be thereafter deprived of the annual use of the

water.[7] And the right of a consumer to so use the water is not affected by a sale or transfer of the ditch or other works.[8]

The consumer is made the judge of the amount and the duty of the water required for the irrigation of his land; and the annual charges must be made upon the quantity furnished, and not in any case upon the number of acres irrigated.[9] But no person entitled to the use of water from any such ditch or canal must, under any circumstances, use more water than good husbandry requires for the crop or crops he cultivates; and any person using an excess of water is liable to the owner of such ditch or canal for the value of such excess; and in addition thereto is liable for all damages sustained by any other person who shall have been entitled to the use of such excess water.[10]

§ 1837. **The Carey Act in Idaho.**—The Carey Act of Congress was accepted in Idaho, and to date greater progress has been made and correspondingly greater benefits derived from that Act than in any other State.

Full proceedings are set forth in the statutes for the operation under the Carey Act.[1] The selection, management, and disposal of such lands is vested in the State board of land commissioners, which has the power to make necessary rules. The statute relating to the selection of the land and the proposals is largely the same as that of Wyoming.[2] An application must also be filed with the State engineer for a permit to appropriate water for the reclamation of the lands, the same as in other cases.[3] The proposal must be submitted to the State engineer, and he must report back to the board as to whether the proposed works are feasible or not, and other details of the said project in full. Upon receipt of the report of the

10 Rev. Codes, 1908, Sec. 3293.

1 See Rev. Codes, 1908, Secs. 1613-1634, as amended by the Acts of the legislature hereafter referred to.

For the general discussion of the Carey Act, see Chap. 67, Secs. 1312-1336; State v. Twin Falls Canal Co., —— Idaho ——, 121 Pac. Rep. 1039.

2 See Sec. 2124; Rev. Codes, 1908, Secs. 1615, 1616, 1631, 1632.

3 Rev. Codes, 1908, Sec. 1617.

State engineer the board must make its decision, and in case of approval it shall instruct the register to file in the local land office a request for the withdrawal of the land. "No request on which the State engineer has reported adversely, either as to the water supply, the feasibility of the construction, the cost or capacity of the works, or as to the character of the lands sought to be irrigated, shall be approved by the board.[4] But, after notice of the adverse report of the engineer, the parties may have sixty days in which to submit a satisfactory proposal, which time may be extended by the board to six months.[5]

Upon approval of the project the usual contract may be made with the contracting company, but no contract shall be made by the board which requires more than five years for the construction of the works; but such time may be extended by the board not exceeding three years. A failure to complete the works within the time required by the contract, or an extension thereof, shall forfeit to the State all rights under the same.[6] And after such forfeiture the board may receive proposals, and may award a new contract for the completion of such works.[7]

Notice must be given of the opening of the lands for settlement.[8] Any citizen of the United States over the age of 21, excepting married women, and further excepting the register of the board, or any public officer or agent in charge of the filing and entering of such lands, may enter any of said lands in any amount not to exceed 160 acres. The application must be accompanied with a water right contract with the constructing company.[9] The uniform price of 50 cents per acre is charged for the lands, the proceeds from the sale of which shall constitute a trust fund in the hands of the State

4 Rev. Codes, 1908, Secs. 1618, 1619.

5 Rev. Codes, 1908, Sec. 1620.

6 Rev. Codes, 1908, Secs. 1621, 1622; as amended, Laws, 1911, Chap. 35, p. 75.

8 Rev. Codes, 1908, Sec. 1625.

9 Rev. Codes, 1908, Sec. 1626; as amended, Laws, 1911, p. 116, also providing that any of the officers above named who shall violate the provisions of the Act shall be punished by a fine not to exceed $1000, or by imprisonment in the penitentiary not exceeding five years.

For the measure of damages for the failure of the contracting company to comply with a contract with a settler and furnish the water, see Summerville v. Idaho Irr. Co., —— Idaho ——, 123 Pac. Rep. 302.

See, also, Hanes v. Idaho Irr. Co., —— Idaho ——, 123 Pac. Rep. 859.

treasurer, to be used only for the reclamation of other lands.[10] Proof of settlement, reclamation, and occupation must be made by the settler; that he has been an actual settler thereon, and has cultivated and irrigated not less than one-eighth of said tract.[11] In case of death of the entryman, the proof may be made by the executor, administrator, heir, or devisee.[12] The usual lien is given the contracting company for furnishing the water rights and provisions for foreclosure of the same.[13] All lands filed upon shall be subject to the rights of way for the canals of the project.[14]

The Act of January 26, 1911,[15] authorized the State board of land commissioners to expend money from the Cary Act trust fund for the protection of life and property, or either of them, in or affected by Carey Act projects, and the granting of a lien for such expenditure.

The Act of March 7, 1911,[16] prohibited State officers, employees, or appointees from having anything to do, directly or indirectly, with the sale or disposal of Carey Act or other public lands.

**§ 1838. Irrigation district law.**—Idaho has also adopted the irrigation district law, modeled largely upon that of California, and discussed at large in a previous chapter of this work.[1]

Rep. 254; Snake River Irr. Dist. v. Stephens, 18 Idaho

The organization of such districts is similar to proceedings for the same in California.[2]

The section upon the subject of the notice of an election for the organization of a district and the qualifications of voters at the same was amended by the Act of March 6, 1911. Every person over the age of 21 who is a citizen of the United States and a resident of the State of Idaho, and an owner of lands in the proposed district, is entitled to vote at such an election.[3] Such election shall be conducted as nearly as possible in accordance with the general laws of the State.[4] After the organization of the district the election of the board of directors of the same must be had, the proceedings for which are similar to that in California.[5]

The powers and duties of the board are also similar.[6] At least, as often as once a year the board of directors shall make a report to the State engineer of the condition of the work of construction, as to capacity, stability, and permanency, and whether or not the plan is being successfully carried out, and as to whether or not the funds available will complete the works. Upon receipt of such report the State engineer shall make such suggestions and recommendations to the board as he may deem advisable for the best interests of the board. A statement of the financial condition of the district must be published.[7] Money may be borrowed and bonds issued for the same by following the usual proceedings,[8] including the confirmation proceedings by the Court.[9] Assessments may be levied and

collected for the usual purposes. But no State lands shall be assessed.[10] All assessments must be made according to benefits and not according to acreage within the district, and proceedings are allowed to contest the question of benefits.[11] Contracts may be let for the construction of the works.[12] The right is given to cross streets and railroads with ditches and canals, and state lands.[13] The right is given to condemn, for the use of said districts, "all lands, water rights, reservoirs, canals, and works constructed or being constructed by private owners, and lands for reservoirs for the storage of needful waters, and all necessary appurtenances and other property necessary for the construction, use, and supply, maintenance, repair, and improvement of said canal or other works."[14]

The boundaries of districts may be changed.[15] Under certain circumstances money will be advanced by the State from the Carey Act trust fund to aid in the organization and surveys of a proposed irrigation district.[16]

**§ 1839. Provisions in aid of the National Reclamation Act.**—Provisions are made for rights of way for projects constructed under the National Reclamation Act; also that the lands belonging to the State under such projects shall be sold only in conformity with the classification of farm units by the United States, and that in all contracts for the sale of lands under such works it shall be provided that the purchaser shall apply for a water right from the Government works and subscribe such lands in the Water Users' Association of the project under which they are located, within one year after said contract is made, or if there be no such association at the time within one year after such association is organized, and

16 See Act of Feb. 27, 1911, Laws, 1911, Chap. 22, p. 47.

upon failure of the purchaser to comply with these provisions, the lands so purchased shall revert to the State, together with the payments made thereon, as fully and completely as if no sale had ever been made.[1]

Provisions are also made for the organization of water users' associations in compliance with the requirements of the United States.[2]

Provisions are also made for irrigation districts to contract with the United States for the construction of the works and the repayment of the money advanced by the United States.[3]

And by the Act approved March 13, 1909,[4] provisions are made for the State land board to contract with the Secretary of the Interior to provide for the irrigation of State lands within or adjacent to National reclamation projects.

Any water users' association which is organized in conformity with the National Reclamation Act,[5] and which, under its articles of incorporation, is authorized to furnish water only to its stockholders, is made exempt from the payment of any incorporation tax and from the payment of any annual franchise tax.[6] It is made the duty of all county recorders in which such water users' associations are organized to provide books and keep a full record of the same.[7]

The Act of February 14, 1911,[8] authorizes the county commissioners to secure data, surveys, estimates, etc., for the purpose of procuring Government aid to irrigation enterprises.

§ 1840. **Floating logs and timber upon streams.**—No dam or boom must be hereafter constructed or permitted on any creek or river unless such dam or boom has connected therewith a sluiceway, lock, or fixture sufficient and so arranged as to permit timber to pass around, through, or over such dam or boom without unreasonable delay or hindrance.[1] Any boom or weir not so constructed is

declared to be a public nuisance, and may be abated, and the owner thereof be liable to a fine of $5 per day for each day the same remains in such condition, and is also liable for any damages sustained by persons by reason thereof.[2]

§ 1841. **Qualifications of engineers.**—The statute as to the examination of the qualifications of engineers and surveyors and the granting licenses thereto largely follows that of California.[1] But all persons who have been granted diplomas as civil engineers by the University of Idaho may be licensed without examination.

"No survey of land, or plat, or subdivision shall be legal after June 1, 1903, unless made by a licensed surveyor.[2]

§ 1842. **Criminal statutes.**—Besides the offenses mentioned in the preceding sections, it is made a misdemeanor for any person to wantonly waste the waters of any stream, to the detriment of any claimant, for irrigation purposes.[1] Any one interfering with the flow of water as regulated by the water master is guilty of a misdemeanor;[2] so, also, the unlawful diversion of water, or the interference with headgates or cutting the banks of a stream.[3] It is made an indictable misdemeanor to injure ditches and appurtenances, measuring devices, or to change a lateral so as to injure the rights of another person.[4] Any person who shall wilfully waste water for irrigation, or who shall wilfully open, close, change, or disturb, or interfere with, any headgate or water box or measuring device, without authority, shall be fined in a sum not exceeding $100, or be imprisoned in the county jail not to exceed six months, or both.[5] It is also made a misdemeanor to neglect to deliver water, or to interfere with its delivery.[6]

6 Rev. Codes, Sec. 7149.

§ 1843. **Riparian rights in Idaho.**—As far as the right to the use of the waters of the natural streams in the State of Idaho is concerned, the doctrine of riparian rights may be considered abrogated by constitutional and statutory law, and by Court decision, although there is no statute in terms directly abrogating the same.[1] And upon this subject it was recently held that, where riparian owners desire to use the water of natural streams for beneficial purposes, they must comply with the provisions of the law governing appropriations, the same as those who are not riparian owners.[2] But upon the subject of the ownership of the soil under natural streams, the common law rule is followed, and a riparian owner upon the streams of the State, both navigable and non-navigable, takes to the thread of the stream, regardless of meander lines, subject, however, to an easement for the use of the public.[3]

1 Drake v. Earhart, 2 Idaho 750, 23 Pac. Rep. 541; Boise etc. Co. v. Stewart, 10 Idaho 38, 77 Pac. Rep. 25, 321; Krall v. United States, 79 Fed. Rep. 241, 24 C. C. A. 543, 48 U. S. App. 351; Idaho etc. Co. v. Stephenson, 16 Idaho 418, 101 Pac. Rep. 821.

The common law doctrine of riparian rights, in so far as those rights conflict with the right of an appropriator of the waters of a stream, is repugnant to and in conflict with the constitution and the statutes of the State, and to that extent is abrogated thereby. Hutchinson v. Watson Slough D. Co., 16 Idaho 484, 101 Pac. Rep. 1059, 133 Am. St. Rep. 125.

§ 1861. Riparian rights in Kansas.

**§ 1844. Particular features of the State.**—Forty years ago one-half of the State of Kansas was considered agricultural and the other half pastoral, and successful agricultural enterprises were not expected beyond the 100th meridian. But, in spite of that idea, the settler gradually moved westward. He had been told that a year of drought and starvation would come. Still he pushed on, breaking and subduing the soil, and showing by his improvements that he had come to stay; and notwithstanding his many disappointments, either he or his children are there yet. The eastern half of Kansas is within the rain belt, and the western portion is within what is known as the semi-arid region.

Generally speaking, the State is one great plain, extending from its eastern boundary to the boundary line between it and Colorado. The State has a rich and deep soil, and an abundance of sunshine. In its eastern half it has sufficient natural moisture to raise crops, but in the western half the rainfall is only sufficient, without irrigation, to lure the hopeful settler to take up his abode there and to struggle against Nature in that unequal contest of dry farming in a semi-arid region.

Among the great sources of water supply in Western Kansas is the underflow or sheet water, which is that vast underground store from which the ordinary wells of the region obtain their supply. There are also a number of natural streams of considerable size, such as the Arkansas, the Republic, Smoky Hill, Solomon, and Cimmarron, and a number of smaller streams. Besides this, there is the opportunity to save up and store the storm waters by means of reservoirs. These storm waters come in considerable quantities, and usually at the time when they are not needed for crop production. These waters can be utilized with small cost, and with an entire immunity from the risks of dangerous floods.[1]

§ 1845. **Irrigation in the State.**—Irrigation is indispensable to the success of an annual production of crops in the western half of Kansas. It has been generally adopted throughout this portion of the State as an adjunct to the rainfall, and would greatly enhance the general prosperity if adopted in the eastern half of the State. Kansas is peculiarly an agricultural State. The farmer is not the only person who would favor the adoption of irrigation there. It is equally important to merchants, bankers, and owners of town property. They have all suffered keenly from the failure of crops without irrigation, and they would all be benefited when an annual crop is insured. The people of Kansas, seeing the great benefits to be derived from the practice of irrigation, have, through their State legislature, adopted for that part of Kansas which lies west of the 99th meridian a very elaborate and even drastic code of control over the natural waters, culminating in the provisions allowing the formation of irrigation districts, which last provisions, in a more or less modified form, have followed the lines laid down by the State of California in this respect.[1]

1 See Irrigation Practice on the Great Plains, by E. B. Cowgill, 1897, Water-Supply and Irrigation Paper No. 5, U. S. Geological Survey; Underground Waters of Southwest Kansas, by E. Haworth, 1897, Water-Supply and Irrigation Paper No. 6, U. S. Geological Survey; Windmills for Irrigation, by E. C. Murphy, 1897, Water-Supply and Irrigation Paper No. 8, U. S. Geological Survey; The Underflow of the South Platte Valley, by Charles S. Slichter and Henry C. Wolff, 1906, Water-Supply and Irrigation Paper No. 184, U. S. Geological Survey.

1 See Irrigation Experiments at Fort Hays, Kansas, 1903-1904, by J. G. Haney; Irrigation in Garden City, Kansas, 1904, by A. E. Wright and

A great many small reservoirs have been constructed by individual farmers and groups of farmers for the irrigation and other uses of the water upon their respective farms. These reservoirs are usually small, being constructed for the purpose of furnishing water to one or more farms. For the purpose of inducing the construction of reservoirs, the legislature of the State enacted a law in 1911 [2] reducing the assessed value of the land of the person who would construct such a reservoir under certain specifications.

According to the census of 1910 the total number of farms irrigated in 1909 was 1006, as against 929 in 1899, an increase of only 77, or 8.3 per cent. The total acreage irrigated in 1909, as given by the same report, was 37,479 acres, against 23,620 acres in 1899, an increase of 13,859 acres, or 587 per cent. The total acreage which all enterprises were capable of supplying with water in 1910 was 139,995 acres. The acreage included in projects completed or under construction in 1910 was 161,300 acres. The acreage irrigated in 1909 has been classified by the census as follows: Under United States Reclamation Service, 6,953 acres; under co-operative enterprises, 27,372 acres, and under individual and partnership enterprises, 3,154 acres.

§ 1846. **Criticism of the Kansas laws.**—The statutory law of the State of Kansas covers a great deal of space, and is nowhere as effective as the laws of some of the other States. This may be due largely to the fact that the greater portion of the State does not depend upon irrigation for the raising and maturity of crops. This portion of the State also has the greater population, and it has evidently been hard work upon the part of the legislators from the western portion to induce their brothers from the other part to enact a simple and effective water or irrigation code. Then, again, there has been the tendency upon the part of the legislators, and especially of the courts, to adhere to the common law doctrine of riparian rights, and at the same time to grant the right of appropriation—a dual system that always brings about confusion. The

A. B. Collins; Pumping Plants in Colorado, Nebraska, and Kansas, by O. V. P. Stout, all found in Separate No. 8, Annual Report of the Irrigation and Drainage Investigations for 1904, Office of Experiment Stations, Bulletin No. 158, U. S. Dept. of Agriculture.

2 See Laws, 1911, Chap. 211, p. 374. See, also, Sec. 1857.

general scheme of the law upon the subject follows that of California.[1] The method prescribed for the appropriation of water is antiquated, which method has been replaced by many of the States by applications to the State engineer. The method of the adjudication of existing rights is the proper one, it being left entirely to the courts at all stages of the proceedings. Riparian rights and other rights to the use of water may be condemned. The irrigation district law is modeled somewhat upon the California law, but is briefer and contains many important changes.[2] The Artesian Well Act of 1911 [3] follows largely that of New Mexico of 1909.[4] The law is very effective, especially as to the sinking of wells and the suppression of waste of waters therefrom. Good results should come from the law. The Carey Act does not apply to the State, so there are no provisions for its operation. The National Reclamation Act does apply to the State, but there has been no legislation in aid of the same. The law of State control has never been adopted, and there are therefore no State administrative officers.

Generally speaking, the State of Kansas needs a new water or irrigation code. Owing to the fact that riparian rights are recognized in the State, probably a water code somewhat on the order of the one adopted by the State of Oregon would be most suited to the conditions in the State.[5] But if the present principles are adhered to the statutes upon the subject at least need recodifying.

**§ 1847. Constitutional provisions—Title to water.**—The State of Kansas has no constitutional provisions upon the subject of waters and water rights.

Neither are there any statutory provisions or declarations as to the ownership or title to waters within the jurisdiction.

**§ 1848. The right of appropriation of water—Transfer of right.**—"The right to the use of running water flowing in a river or stream in this State for the purposes of irrigation may be acquired by appropriation. As between appropriators, the one first in time is the first in right."[1]

1 For the statutes of California, see Chap. 86, Secs. 1724-1768.

2 See Sec. 1857.

3 See Sec. 1859.

4 See Sec. 1935.

5 See Chap. 97, Secs. 1973-1997.

1 General Statutes of Kansas, 1909, Sec. 4405.

"In all that portion of the State of Kansas situated west of the 99th meridian, all natural waters, whether standing or running, and whether surface or subterranean, shall be devoted, first, to purposes of irrigation in aid of agriculture, subject to ordinary domestic uses; and, secondly, to other industrial purposes, and may be diverted from natural beds, basins, or channels for such purposes and uses"; provided, that vested rights shall not be interfered with.[2] The right to appropriate water flowing in well-defined subterranean channels is also given.[3]

"Every person complying with the provisions of the Act and applying the waters obtained by means of any artesian well to beneficial uses, shall be deemed to have appropriated such waters to the extent to which the same shall be so applied within a reasonable time after the commencement of the works, and such appropriation shall have effect as of the day of commencement of such works, provided the same be prosecuted with reasonable diligence; otherwise from the time of the application of the waters to a beneficial use.[4]

"The appropriation of water hereafter shall in every case be deemed and be taken to be accomplished and effectual only as to so much water as shall have been actually applied to beneficial uses within a reasonable time after the commencement of the works by means of which such appropriation is intended to be made, or afterward where no appropriation has in the meantime been initiated by others, together with the reasonable amount necessary to supply losses by waste, seepage, and evaporation; all the residue of the water within the capacity of the canal or other works shall be deemed to be derelict, and liable to appropriation by any subsequent appropriator.[5]

"All waters flowing in subterranean channels and courses, or flowing or standing in subterranean sheets or lakes south of Township 18 and west of the 99th meridian, shall belong and be appurtenant to the lands under which they flow or stand, and shall be devoted, first, to the irrigating of such lands in aid of agriculture, subject

The future references in this chapter will be to the General Statutes of Kansas, 1909, by Dassler, published by Crane & Co., Topeka, Kansas, 1910.

See, also, the Artesian Well Act of 1911, Sec. 1859.

[5] Gen. Stats., 1909, Sec. 4424.

to ordinary domestic use; second, subject to such use, may be devoted to other industrial purposes; provided, however, that nothing herein contained shall in any way affect appropriations heretofore made."[6]

By the Act approved March 3, 1911,[7] it was declared that all water rights of every kind, or shares in irrigation companies, entitling the owners thereof to the use of water for irrigation, shall be appurtenant to the land upon which they are established, by the use of water thereon, and shall pass with any and all conveyances of such land, whether mentioned in the deeds or not, unless the same is expressly excepted; provided, however, that such water rights or shares may be subject to separate transfers by deed.

§ 1849. **The appropriation of waters—Standards of measurement.**—Upon the subject of the appropriation of water the statute of Kansas follows largely that of California, with some modifications.[1] It provides that a notice in writing must be posted at a conspicuous place at the point of diversion, stating therein: First, that such person, company, or corporation claims the water there flowing to the extent of (giving the number of inches), measured under a four-inch pressure, and describing and defining as accurately as may be the place of diversion; second, the means by which such person or company intends to divert it, and the size of the canal, ditch, or flume or aqueduct in which he intends to divert it. A copy of such notice must, within ten days after it is posted, be also posted in a conspicuous place in the office of the county clerk of the proper county, and be recorded by the clerk in a book kept for that purpose.[2]

By the Act of 1891 [3] it was provided that the county clerks should turn over all records relative to the appropriation of water to the register of deeds of the county; and that such notices and proof of posting thereof shall be recorded by such register; and that thereafter any one posting any notice of the appropriation of water shall specify the amount appropriated in cubic feet per second, instead of inches, as above stated.

6 Laws, 1911, Chap. 212, p. 376, amending Gen. Stats., 1909, Sec. 4427.

For the Artesian Well Act, see Sec. 1859.

7 Laws, 1911, Chap. 215, p. 379.

1 For California, see Sec. 1730.

2 Gen. Stats., 1909, Sec. 4407; Act of 1886, Laws, 1886, Chap. 115, Secs. 1-3.

3 Gen. Stats., 1909, Sec. 4526.

Within six months after such notice is posted the claimant must commence the construction of his works and must prosecute the same diligently and uninterruptedly to completion, unless interrupted by stress of weather or other unavoidable circumstances. By compliance with the above the claimant's right to the use of the water relates back to the time the notice was posted. A failure to comply with the above conditions shall deprive the claimant of the right to the use of water as against a subsequent claimant who complies therewith.[4]

"Any prior right of appropriation shall exist and continue only by the exercise thereof in a lawful manner, and any failure of such appropriator to apply such water to lawful and beneficial uses, without due and sufficient cause shown for such failure, shall be deemed an abandonment and surrender of such right."[5]

Seepage water may be drained from the lands where it rises, or, at the election of the owner thereof, may be conveyed to other lands and applied to beneficial uses at his pleasure. Rights of way for conducting such waters may be acquired by condemnation.[6]

§ 1850. **The adjudication of rights.**—The exclusive jurisdiction for the ascertainment and settlement of the several rights and priorities of right of persons interested, either as carrier or consumer, in water at any time appropriated is conferred upon the several District Courts, in the proper equitable actions therefor.[1] The Court is given the authority to appoint a water bailiff to prevent the waste of water, and to enforce the priority of appropriation, according to the rights and priorities of the parties entitled to receive the same.[2]

§ 1851. **Ditches and canals and rights of way therefor.**—Any person may conduct water into and along any of the natural streams of the State, and may withdraw all such waters at any point desired, without regard to prior appropriations of water from such stream, due allowance being made for evaporation and seepage.[1]

[2] Gen. Stats., 1909, Secs. 4523-4525.

[1] Gen. Stats., 1909, Sec. 4425.

Where the channel of a natural stream has from any cause been changed, the ditch or canal may be extended to such stream, and embankments may be erected so that the water may be turned therein; provided that no such extension shall be allowed to interfere with the operation and enjoyment of any other ditch, conduit or other works.[2]

Where any canal, ditch, or other works have been located or constructed on or over any tract of land with the knowledge and consent of the owner thereof, or upon or over lands owned by the United States and prior to the occupation by any settler, such location and construction shall be *prima facie* evidence that the same was rightful; provided, however, that such works have been constructed for a period of at least two years prior to January 1, 1886.[3]

Any person or company who has heretofore constructed any canal or other works for purposes of irrigation upon or over lands unoccupied at the time of such construction, and who shall maintain the same for a period of five years, without objection in writing from the owner of such land, shall be deemed and held to have acquired a permanent right of way for such works, not exceeding the total width of three times the width of such canal, ditch, flume, or aqueduct. Damages, however, may be allowed the owner of such land not exceeding the value of the land occupied at the date of such construction.[4]

The statute provides that all necessary rights of way and sites for any works for diverting, storing, or conveying water to be applied to industrial uses shall be allowed on, over, and through any lands, and on, over, across, and under any ditch, canal, conduit, railroad, street or highway by the nearest and most practical route and method commensurate with the least damage to the property condemned; provided, that no owner of real estate shall be compelled to grant a right of way over his property if there shall be already in operation over said property irrigating works sufficient to properly irrigate the same land intended to be irrigated by the canal for which such condemnation is sought. It provides that the procedure for condemnation shall be in the manner prescribed by the laws regulating the right of eminent domain which are or may hereafter be enforced.

2 Gen. Stats., 1909, Sec. 4426.
3 Gen. Stats., 1909, Sec. 4410.
4 Gen. Stats., 1909, Secs. 4411, 4412.

It provides that should any of the works for diverting or storing the waters cease for a period of two years to be in operation, the right of way or site shall cease, and it shall be deemed to have been wholly abandoned and all right, title, and interest in and to the lands theretofore so occupied and used shall revert to and vest in the owners at the time of such reversion of the several tracts and parcels of land of which the lands embraced in such right of way or site formerly constituted a part.[5]

The proprietors of all works shall construct and always maintain in good order and repair the dams, locks and gates, embankments, and all other appurtenances thereof, so that the water may not flood or damage the premises of others, or any highway, or unnecessarily run to waste, and shall be liable for all damages resulting from their wilful or negligent failure to comply with any of the provisions of the statute, or from their negligence in the construction, maintenance, or operation of any such works.[6] The canals and ditches must be cleaned and repaired at certain seasons of the year,[7] headgates, rating flumes, and measuring devices must be constructed, so also waste gates, sand gates, and tail races where necessary.[8] They shall also construct and maintain necessary outlets and gates for the convenient delivery of water to the persons entitled to the same.[9] Bridges and viaducts must be constructed and maintained at road crossings.[10]

A right of passage is given over the private lands of others to and from such works, and the proprietor shall cause to be placed in any fence obstructing such passage suitable gates for that purpose.[11] Every dam or embankment constructed for the purpose of holding, impounding, storing, collecting, or conveying water must be constructed in accordance with the specifications prescribed by the statute.[12] Unsafe works may be abated by injunction.[13]

**§ 1852. Corporations and companies.**—Corporations may be organized for the purpose of storing and conveying water to consum-

ers for hire or profit. Where water is furnished for irrigation a lien is given upon the whole crop grown upon any tract or parcel of land during the year the water was so furnished for the full amount of the contract price.[1]

Any and all irrigating, ditch, and canal companies organized for the purpose of furnishing water for irrigation "may condemn the right to take such water from any stream in the State of Kansas."[2] It is also made the duty of all companies, provided they have sufficient water, to furnish water upon a proper application therefor and upon the tender of the proper price therefor.[3]

Under a law enacted in 1911[4] it is made the duty of all companies and owners of ditches and canals to keep such works in repair so as to properly deliver the water when needed.

Every person, association, or corporation owning or controlling any ditch, canal, or reservoir, or officer or agent of such association or corporation who shall, after demand in writing made upon him for the carriage or delivery of water for irrigation, milling, sanitary, or domestic purposes, to be carried in or delivered from the said works, and after tender of the lawful rate of compensation therefor, refuse to furnish and deliver from such works any water so applied for, or carry therein any water, the carriage whereof is so applied for, which water can or may be, by use of reasonable diligence in that behalf, and with the carrying or storage capacity of such ditch or other works, lawfully carried and furnished and delivered without infringement on prior rights, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than $100 or more than $5000, or imprisonment for a term of not less than three months or more than one year, or both such fine and imprisonment, in the discretion of the Court.[5]

**§ 1853. The condemnation of water rights.**—The right to the use of water, or water rights, may be condemned by virtue of the

5 Gen. Stats., 1909, Sec. 4505.

power of eminent domain. This right also includes the right of riparian proprietors who claim the water by virtue of their ownership of the land bordering on a stream.

"Every vested right of prior appropriation or diversion of water for industrial uses shall be subject as to the right of eminent domain, and may be condemned and compensated for, for public and beneficial uses, in the same manner and under the same restrictions and regulations as govern the condemnation of other private property.[1]

"Any and all irrigating ditch and canal companies which have been heretofore organized or incorporated, or which may hereafter become organized and incorporated for the purpose of procuring or furnishing water for the purpose of irrigation, which shall desire to condemn the right to take such water from any stream in the State of Kansas, shall have the right to procure such condemnation for such purpose in the following manner."

The Act further provides that a petition must be presented to the judge of the District Court of the county, signed by the company or by its authority, stating the number of miles of ditch built, or to be built, and a specific description of the dimensions of the same, and describing the stream and the place where the ditch company proposes to take water from such stream, and asking the appointment of commissioners to condemn such right. And the judge shall then appoint three disinterested freeholders of such county to make such condemnation. The commissioners must meet after having given notice, at the time and place specified in said notice, and hear all claims for damages presented to them in writing by any person or persons for the condemnation of the right to take the water; and shall allow and award such damages as shall seem just, reasonable and fair, as compensation to the persons presenting such claims; and after having heard all claims shall make a report to the clerk of the District Court, stating the facts of their investigation. The right of appeal is granted from the decision of the commissioners to the District Court. The party making application shall, within sixty days from the filing of such report, file with the county treasurer of the county a certified copy of such report, and shall pay the

1 Gen. Stats., 1909, Secs. 4431, 4437. See Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971; Lake Keon etc. Co. v. Klein, 63 Kan. 884, 65 Pac. Rep. 684.

amount of damages awarded by the commissioners in said report, except in cases where an appeal has been taken.

It provides that in all cases where the amount of damages awarded has been paid, the right of the company to take the amount of water condemned for such purposes shall become absolute, and all persons shall be forever barred from claiming damages or any right to interfere with the taking of such waters except only such as may have appealed; and such persons shall only have the right to contest the amount of damages.[2]

**§ 1854. The right to the use of water—Distribution of water.**—Any person having by lease, purchase, or agreement, written or oral, procured from any carrier water for the irrigation of lands or other uses, and having actually applied such water to beneficial uses, shall thereafter, upon payment of the reasonable rate prescribed by the county commissioners, be entitled to continue in the enjoyment of water from the works of such carrier to the same amount. It also provides that water may be taken for domestic uses from any natural stream at any public road crossing or at any place upon the lands of others where such lands are unenclosed and uncultivated.

Any person entitled to the use of waters for irrigation or for any other purpose whatsoever, may collect and store up the same for use presently thereafter, and any person transferring, selling, leasing, assigning, or bargaining with reference to the transfer, sale, lease, or assignment of water, or any right he may have acquired to the use thereof, and any person receiving any money or any other valuable thing whatsoever in consideration of the prorating or rotating of water shall be deemed and taken to have abandoned all right to the use or enjoyment of such water.

"Sec. 6. Every right of use of water under this Act shall be subject to the right of eminent domain, and, as public interest and economy may require, may be condemned and compensated for as any other private right or property.

"Any person transferring, selling, leasing, assigning, or bargaining with reference to the transfer, sale, lease, or assignment of any water, or any right he may have acquired to the use thereof, and any person receiving any money or other valuable thing whatsoever in consideration of the prorating or rotating of water, or in consid-

2 Gen. Stats., 1909, Secs. 4413-4422, 4437.

eration of his agreement to prorate or rotate water, shall be deemed and taken to have abandoned all right to the use or enjoyment of such water; provided, however, such abandonment shall not operate to the prejudice of the rights of any incumbrancer or equitable owner of the lands, mill, manufactory, or other works to which such water is appurtenant."[1]

Upon the subject of the distribution of waters from the natural streams among the several ditches taking water therefrom, it is provided that the proprietors of any ditch, conduit, reservoir, or other works may procure the water to which they are entitled through like works of any other proprietor upon such terms as may be agreed upon between them without in any manner impairing or affecting their right or priority; provided, however, that thereby the waters supplied to any consumer be not diminished.[2] And the proprietors of two or more canals, ditches, reservoirs, or other works may, by consent in writing of those entitled to the use of water therefrom, agree for the rotation of the water.[3] But no such agreement shall go into effect if it shall be manifestly injurious to the proprietors of other ditches, and proceedings may be had to annul such agreement.[4] In like manner an agreement to rotate may be made between the consumers under any particular ditch.[5]

The proprietors of every ditch, conduit, or reservoir shall immediately, upon the construction of the works, cause to be chosen a superintendent of such works, upon whom process may be served in actions, and it is made the duty of such superintendent of such works to measure the water therefrom to those entitled thereto, and in times of scarcity the water must be apportioned ratably.[6] The several consumers under any lateral, by vote of the majority thereof, may also appoint a superintendent of such lateral to distribute the water among the consumers, and in times of scarcity the water must also be apportioned ratably among them. "And if the proprietors of any such works having such excess and being subsequent in right shall fail or refuse to turn out such supply of water when requested by the party entitled to receive the same so to do, the headgate or wastegate of the works receiving such excess shall be so set and locked by the officer authorized by law to perform such duty as to

permit a sufficient amount of said water to pass and flow to the party having the right to receive the same."[7]

§ 1855. **Reservoir rights.**—By the Act approved March 13, 1911,[1] it was provided that any land owner residing and owning land in the State not within corporate limits of any city who shall by the construction of a dam across any dry water course form upon his own land one or more reservoirs for the collection and storage of surface waters, and shall maintain the same, shall be entitled to compensation therefor as therein provided; provided, that the specification for any dam shall be drawn by the county engineer or surveyor, at the expense of the county. If such reservoir is built of earth, and if during the major portion of the year preceding the first day of March in any year there shall have been stored in such reservoir not less than one acre-foot of water, the land owner shall be entitled to a reduction of $100 on the assessed valuation of each piece of land; provided that not more than three such reservoirs shall be so compensated for in any one year for each 160 acres. If such reservoir is built of stone, and during the same period not less than four acre-feet are stored, the owner shall be entitled to a reduction of $200 on the assessed valuation of the land, not less than twenty acres; not more than five such reservoirs shall be compensated for for each 160 acres. If constructed of concrete, and during the same period, will store not less than one acre-foot, on not less than ten acres, a reduction of $200 is allowed, not more than three reservoirs to be compensated for for each 160 acres; and if such reservoir shall store not less than four acre-feet a reduction of $300 is allowed, not more than five such reservoirs on each 160 acres.

To be entitled to such reduction the land owner must file a plat giving full details of such reservoirs with the register of deeds. Such plat must be certified to by a competent engineer. It is also made the duty of the township trustee to certify to the board of county commissioners to the facts concerning such reservoirs, and the county commissioners may make additional investigations.[2]

§ 1856. **Water rates.**—Upon the subject of fixing water rates, the statute provides that whenever the purchasers of water from

1 Laws, 1911, Chap. 211, p. 374.
2 See, also, Gen. Stats., 1909, Secs. 4554-4556.

any irrigation company shall consider the rate of charges of such company to be unreasonable, extortionate, or unjust they may appeal to the board of railroad commissioners; and if that board shall consider the complaint just they shall proceed to notify the company and the complainants that thirty days from the date of such notice they will hear testimony in relation thereto; and if after hearing such testimony they shall decide that such rates are extortionate and unjust, they shall fix a rate of compensation for the use of the water, which rate shall be binding upon the irrigation company for one year from the date of such decision, and until the further order of said board therein.

The board of railroad commissioners shall have the same powers in relation to irrigation companies that they have in relation to railroad companies.[1]

In the penal portion of the same Act as the above is found [2] it is made unlawful for any person, association, or corporation to demand, bargain for, accept, or receive from any person who may apply for water any royalty or bonus; "but such water shall be carried or stored and delivered according to the right of the person entitled to the enjoyment thereof, upon the payment or tender of charges fixed by the *county commissioners of the proper county* as is or may be provided by law."

By an Act of 1911 [3] the jurisdiction of the railroad commission in the matters of fixing rates was transferred to the public service commission created by the Act.

**§ 1857. Irrigation district law.**—The irrigation district law was first enacted in Kansas by the Act of May 20, 1891,[1] and was afterward supplemented by the Act of May 1, 1901.[2] The two Acts together make a very concise and effective district law, and are based upon the California law upon the subject with a number of material changes.

1 Gen. Stats., 1909, Secs. 4477, 4478. See, also, Laws, 1911, Chap. 238, p. 417; Western Irr. Co. v. Chapman, 8 Kan. App. 778, 59 Pac. Rep. 1098.

2 Laws, 1901, Chap. 234; Gen. Stats., Secs. 4527-4534.

The authority for organizing such districts is conferred upon the board of county commissioners, upon petition signed by not less than three-fifths of the resident land owners of such proposed district. Districts may be organized where the contiguous territory is located in two or more counties, in which case the board of county commissioners of the county in which the greater part of the territory of such district is located has jurisdiction.[3] And to the petition must be attached an outline map showing only the tracts of territory that are proposed to be included in such district.[4] It is made the duty of the board to call an election for the purpose of organization of the district, it requiring three-fifths majority of the qualified voters of such proposed district to create the same.[5] The officers of such a district comprise the "board of irrigation commissioners," consisting of a president, secretary, and treasurer, and shall hold their offices for a period of one year.[6] The issuance of bonds may be provided for at a special election called therefor, upon a petition of not less than three-fifths of the resident land owners of the district; and in order to authorize the issuance of bonds, three-fifths of the votes cast at such election must be in favor of the same.[7] Such bonds must be sold at not less than par.[8] An election must also be held to determine upon the purchase of existing works and rights, and where an issue of bonds is for such purchase, such elections may be held together.[9] Irrigation works may be constructed by contract.[10] Rights of way may be acquired. But it is provided "that nothing herein shall be so construed as to grant to such corporation power to condemn or acquire in any other manner than by purchase any irrigation works belonging to any other person, company, or corporation." [11]

The said board has the power to make all necessary rules and regulations for the operation of the district and for the distribution of the waters therein to those entitled thereto, and shall have the power to dispose of the waters in its ditches to all persons in the district, and charge therefor such rates as the board may fix from

11 Gen. Stats., 1909, Sec. 4484.

time to time, subject to the rates fixed by the county commissioners. If the income from the rental of water is not sufficient, then it is made the duty of the board to levy and collect a tax "on all real estate dependent upon such works for irrigation in said district." The members of the board shall draw $3 per day for the time actually employed, and not to exceed the sum of $100 per annum. The said board may appoint a superintendent of the district, who shall in no event be a member of the board, who shall receive such compensation as may be agreed upon, not to exceed $1000 per annum.

§ 1858. **Board of irrigation, survey, and experiment—Experiments.**—By the Act of March 5, 1895,[1] there was created a board to be known as a Board of Irrigation Survey and Experiment, composed of five members, two of whom shall be the geologist of the State University at Lawrence and the president of the Agricultural College at Manhattan, who shall be advisory members of said board, and three members to be appointed by the Governor, by and with the advice and consent of the senate of Kansas. The last named members shall be persons versed in practical irrigation and to be active members thereof. The active members of said board shall take an oath of office and give a bond in the sum of $5,000. And the president shall be known as the State engineer of irrigation.

The duties of said board are prescribed as being to locate irrigation wells, and to determine upon the kinds of pumps to be used; to make practical tests of the underflow waters of the State, for the purpose of utilizing such water for irrigation purposes; to make stream measurements; to prepare drainage maps; to make observations of the rainfall, temperature, evaporation, and soil percolation; to make borings for artesian water, and to keep a complete record of all surveys and investigations and to make biennially a full report of the same.

By the Act approved March 4, 1911,[2] it was provided that the Agricultural Experiment Station of the Agricultural College is authorized to conduct experiments on the proper use of irrigation waters and in co-operation with the irrigation investigations of the office of the experiment stations of the United States Department of Agriculture.

[1] Laws, 1895, Chap. 162; Gen. Stats., 1909, Secs. 4535-4552.

[2] Laws, 1911, Chap. 214, p. 378.

§ 1859. **Artesian well Acts.**—By the Act approved March 13, 1911,[1] an elaborate and effective artesian well law was enacted, based largely upon that of New Mexico of 1909, although differing somewhat in details.[2]

For the purposes of the Act, an artesian well is defined to be "an artificial well which is sunk to the artesian stratum or basin, over 400 feet deep, and from which water is raised to or above the surface of the earth by natural pressure, or from which water is raised to or above the surface of the earth by artificial means: Provided, nothing in this Act shall apply to water flowing from mineral shafts."[3]

To provide for the carrying out of the provisions of the Act, the board of county commissioners of each county having artesian wells therein, shall constitute the county artesian well board, until the county artesian well board is elected as provided. When ten artesian wells have been drilled in any county, the board of county commissioners shall issue a call for the convention of the owners of artesian wells, and at said convention there shall be elected three commissioners to be known as the "County Artesian Well Board," and each well shall be entitled to one vote at such election. And such board is given the power to appoint a county artesian well supervisor. The powers granted the board and to the supervisor are largely the same as those of the same officials in New Mexico.[4] All decisions relative to matters relating to wells lie first with the supervisor, and, second, to the board upon appeal.

To pay the necessary expenses of administration, an annual license fee is imposed upon each artesian well as follows: For each well from which water is used for irrigation, and from which water has to be raised by mechanical means, $2.50 per year; for flowing wells an "equitable and just sum to be based upon the amount of flow"; for each and every reservoir, $2.50 per year. Said amounts to be levied and collected as taxes.[5]

To construct or repair any artesian well, a permit must be granted by the supervisor, upon application for the same. All persons owning, controlling, or using artesian wells must file a sworn statement

1 Laws, 1911, Chap. 210, p. 363, Secs. 1-31.

2 For the artesian well law of New Mexico, see Sec. 1935.

3 Laws, 1911, p. 363, Sec. 1.

4 See Sec. 1935.

5 Laws, 1911, p. 369, Sec. 15.

of the same with the county clerk. When reservoirs are constructed to be used for the storage of waters in connection with artesian wells, the same shall not be greater in size than sufficient to hold the maximum flow of the waters from such wells in a continuous run for 48 hours, except when the maximum flow is less than 300 gallons per minute, in which case the flow may be for 96 hours. All such reservoirs are subject to inspection by the supervisor who may order repairs on the same. The maximum amount of water that may be used on each acre under cultivation must not exceed 1½ acre feet during the year. Repairs may be made upon wells and reservoirs by the supervisor, and the expenses for the same shall become a lien upon the land, which may be foreclosed according to law.[6] The owners of such wells must take the pressure reading of the same. The Cippoletti weir and the tables therefor must be used for measuring the flow.[7] All wells must be constructed according to specifications set forth in the Act, and must be so constructed as to confine and to conduct to the surface all flows encountered.[8] Any well that is not tightly and securely cased, capped, and furnished with such mechanical appliances as will arrest and prevent the entire flow of water from such well, is declared to be a public nuisance and may be abated.[9] Severe penalties are prescribed for the wasting of water from wells, and for other violations of the Act, similar to those prescribed by the Act of New Mexico.[10]

By the Act approved March 10, 1911,[11] the county commissioners of certain counties were authorized to levy an additional tax for the purpose of drilling artesian wells.

§ 1860. **Criminal statutes.**—It is made a misdemeanor to wilfully or maliciously injure any canal or other works.[1] It is made unlawful to make any excess charge for the furnishing of water, where the rate for the same has been fixed, under a penalty of a fine of not less than $100 nor more than $5000 or imprisonment for a term of not less than three months nor more than one year or both.[2] The refusal to furnish water upon proper application for the same and

where the ditch owners have a surplus is made punishable the same as last above.[3] The wilful neglect of any superintendent of works is punishable by a fine of not less than $10 nor more than $100 or imprisonment for not less than one month, or both.[4] The wilful wasting of water is punishable by a fine of not less than $5 nor more than $300.[5]

The unlawful interference with any works, or with any one in charge thereof in the discharge of his duties, is punishable by a fine or not less than $50 nor more than $300 and by imprisonment not to exceed 90 days.[6] For a second offense, a punishment of not less than $20 nor more than $1,000, or imprisonment for not exceeding one year, may be inflicted.[7] The failure to construct rating flumes or measuring devices, headgates, and tail races is punishable by a fine not exceeding $10 nor more than $300.[8] The failure to construct works in accordance with the provisions of the statute is punishable by a fine of not less than $25 nor more than $5000, or by both; and in addition thereto it is provided, "that if loss of human life be caused or occasioned by such wilful or negligent conduct, the person so offending shall be amenable to all the laws and subject to all the penalties provided by the statutes of the State of Kansas in respect of unlawfully, maliciously, wilfully, or negligently causing the death of any person."[9]

It is made a misdemeanor to waste water from artesian wells.[10] So, also, to permit wells to remain not tightly and securely cased, and furnished with mechanical appliances to shut off the entire flow.[11]

§ 1861. **Riparian rights in Kansas.**—Kansas is one of the States of the semi-arid region that has endeavored to adhere to the common law theory of riparian rights, and at the same time has adopted by statute the right of appropriation for the western portion of the State. In that portion of the State east of the 99th meridian the common law of riparian rights undoubtedly exists as to the right to

3 Gen. Stats., 1909, Sec. 4505.

For liability for damages for failure to supply water, see Western Irr. Co. v. Chapman, 8 Kan. App. 778, 59 Pac. Rep. 1098.

4 Gen. Stats., 1909, Sec. 4508.

5 Gen. Stats., 1909, Sec. 4508.

6 Gen. Stats., 1909, Sec. 4509.

7 Gen. Stats., 1909, Sec. 4510.

8 Gen. Stats., 1909, Secs. 4514-4516.

9 Gen. Stats., 1909, Sec. 4518.

10 Laws, 1911, p. 364, Secs. 4, 7.

11 Laws, 1911, p. 363, Sec. 2.

the waters of the same stream as between the different owners thereon.[1] But in that portion west of the 99th meridian, by the very adoption of the doctrine of appropriation certain features of the common law must be held to have been modified, especially as to the right of a riparian proprietor to the undiminished flow of a stream past his premises. And, so too, where the water was appropriated in that portion of the State or in another State where the right of appropriation is allowed, and the stream continues its flow into the other portion of the State. This was illustrated in the Kansas-Colorado case,[2] where it was contended "that Kansas has a right to the continuous flow of the waters of the Arkansas River, as that flow existed before any human interference therewith," but in reference to which claim Mr. Justice Brewer in rendering the opinion of the Court, said: "As Kansas thus recognizes the right of appropriating the waters of a stream for the purposes of irrigation, subject to the condition of an equitable division between the riparian proprietors, she can not complain if the same rule is administered between herself and a sister State." It is certain that as to all streams which rise in that portion of the State where the right of appropriation is allowed, or in other States where allowed, that the rights of riparian proprietors to the undiminished flow of the streams, without use, by the decision in the Kansas-Colorado case, received a decided backset.

1 Upon the subject of raparian rights in Kansas, see Shamleffer v. Council Grove etc. Co., 18 Kan. 24, 26 Am. Dec. 765; Clark v. Allaman, 71 Kan. 206, 80 Pac. Rep. 571, 70 L. R. A. 971, where it is held that the doctrine of prior appropriation may exist in the same State with the common law doctrine of riparian rights.

# CHAPTER 91.

## MONTANA.

§ 1862. Particular features of the State.
§ 1863. Irrigation in the State.
§ 1864. Criticism of the Montana laws.
§ 1865. State constitutional provisions.
§ 1866. Water rights defined, etc.—The right to appropriate water.
§ 1867. The appropriation of water—Appropriation from adjudicated streams.
§ 1868. The adjudication of existing rights.
§ 1869. Standard of measurement.
§ 1870. Administrative officers—State engineer.
§ 1871. Ditches and canals and rights of way therefor.
§ 1872. Reservoir rights.
§ 1873. The distribution of water.
§ 1874. Corporations and companies.
§ 1875. Irrigation districts.
§ 1876. The Carey Act in Montana.
§ 1877. Provisions in aid of the National Reclamation Act.
§ 1878. The pollution of waters.
§ 1879. Criminal statutes.
§ 1880. Riparian rights in Montana.

**§ 1862. Particular features of the State.**—Montana is the most northerly State of the arid region. In certain portions of the State, particularly in the northwestern part, crops are often raised without irrigation. Also about one-half of all the grain crops in the State are raised by dry farming. For an arid State, Montana has a large water supply. Occupying the crest of the continent, many rivers have their sources in the elevated ranges of mountains which are found in different portions of the State. More than two-thirds of the State is on the eastern slope of the main range of the Rocky Mountains and consists of table lands. The greater portion of this area lies in the drainage basins of the Missouri and Yellowstone Rivers, which basins have an approximate area of 36,312 square miles in the State of Montana. The northeast portion of this basin is an extension of the Great Plains Region in which the streams have cut great channels.

The climate of Montana is arid and is typical of much of the Rocky Mountain region. The annual precipitation is about 15

inches annually, but about 70 per cent of this falls during the crop-growing season. The precipitation, however, varies greatly, as is the case in all mountainous countries, with the altitude, the mountains receiving 30 inches or more, usually in the form of snow, while the lower plains receive only ten inches or even less. There is also the liability of extreme cold in winter. From the farmer's standpoint, the worst feature of the climate is the comparatively short season between the late spring and the early autumn frosts. The character of the crops raised is largely influenced by this feature. All kinds of grain and forage can be raised, but, except in certain favored localities, the raising of fruit is uncertain. The soil is of the best, and any crop can be raised which can withstand the climate.

§ 1863. **Irrigation in the State.**—It is stated by Professor Fortier that the largest amount of land in the State of Montana which can be irrigated from the water available from all sources including stream flow, storage reservoirs, and wells is about 6,000,000 acres. The amount which is arable land, but which can not be irrigated is a much larger area.[1] Without extensive reservoir systems, on account of the short irrigation seasons, the full flow of the streams can not be utilized for more than a third of the year. And the State has fairly entered upon the storage period of its waters.

The United States, under the provisions of the National Reclamation Act,[2] has undertaken the construction of several projects. The Blackfeet Indian Project in Teton County is well under construction and has an irrigable area of 132,000 acres. The Flathead Indian Project is also under process of construction, and has an irrigable area of 150,000 acres. The Fort Peck Indian Project is in the same condition, with an irrigable area of 130,000. The Huntley Project is in the same condition, with an irrigable area under the main unit of 28,921 acres. The Milk River Project is nearly completed, with an irrigable area of 248,000 acres under the whole project. The St. Mary Project is in the same condition, with an irrigable area of 100,000 acres. So, also, the Sun River Project, with an irrigable area of 276,000 acres. The Lower Yellowstone

1 Irrigation in Montana, by Samuel Fortier, 1906, Office Expr. Stations, Bulletin No. 172, p. 507.

2 For full discussion of this Act, see Chap. 65, Secs. 1235-1286.

Project, partly in Montana and partly in North Dakota, is also well toward completion, with an irrigable area of 64,622 acres.[3] Under a number of the projects the lands are open to entry and are rapidly being settled upon.

The State of Montana has also taken advantage of the Carey Act and enacted laws for its enforcement. It has also adopted the irrigation district law, and a number of districts are reported as being in a prosperous condition.[4]

According to the Census Report for 1910, the total number of farms irrigated in 1909 was 8,970, as against 8,043 in 1899, an increase of 927, or 11.5 per cent. The total acreage irrigated in 1909 was 1,679,084 acres, as against 951,154 acres in 1899, an increase of 727,930 acres, or 76.5 per cent. The total acreage which all enterprises were capable of irrigating in 1910 was 2,205,155 acres. The acreage included in projects, either completed or under construction in 1910 was 3,515,602. This indicates the area which will be available within the next few years for the extension of irrigation and shows that the area irrigated can be more than doubled without the construction of additional works.

§ 1864. **Criticism of the Montana laws.**—The State of Montana has not kept pace with her sister States as far as legislative enactments are concerned governing waters, their appropriation, and distribution. The method of appropriation is somewhat antiquated, and no water or irrigation code, as the same is known in other States, has been enacted. There is a State engineer, but his powers and duties are limited and prescribed practically to that of chairman of the Carey Land Act Board, reporting upon irrigation propositions, and to co-operating with the United States Geological Survey in making stream measurements. It would be better to confer more powers upon the State engineer especially relative to the appro-

[3] See Annual Reports of the Reclamation Service, subject, Montana.

[4] For works upon the subject, see Irrigation in Montana, by Samuel Fortier, 1906, Office Exper. Stations, Bulletin No. 172, U. S. Dept. of Agriculture; Irrigation Investigations in Montana, by Samuel Fortier, 1900; *Id.*, Bulletin No. 104, Separate No. 4; Investigations in Montana, by Samuel Fortier; *Id.*, Bulletin No. 119, Separate No. 3; Geology and Water Resources of the Great Falls Region, Montana, by Cassius A. Fisher, 1909, Water-Supply Paper No. 221, U. S. Geological Survey; the various Reports of the Reclamation Service, subject, Montana.

priation of water and its distribution to those entitled thereto. As the law now stands he has nothing to do with either of these subjects, an appropriation being instituted by the posting and filing of a notice, and the distribution being made by means of commissioners appointed by the district court. The appropriation of waters of streams which have been adjudicated is also through the courts.[1] The special proceedings for this purpose are unique to the State of Montana. As time moves on and the population of the State becomes more dense, it will be found that the courts will have plenty to do, other than to attend to the details of the appropriation and distribution of waters. This phase of the question should also be left to a hydraulic engineer as he has the theoretical knowledge and practical experience to enable him to properly perform these duties. One of the greatest objections to the Montana law as it now stands is that the record of all appropriations are scattered throughout the State with the clerks of the various district courts, and that there is no central office where both the stream measurements and at the same time the appropriations of a certain stream may be ascertained.

As far as the adjudication or determination of existing water rights are concerned, it is properly left to the courts.

The Act of 1911, upon the subject of the distributing of decreed waters by the court through commissioners appointed for that purpose, simply enacts into statutory law the powers of a court of equity to enforce its judgments and decrees. The Act, however, specified the exact mode of the enforcement.[2]

§ 1865. **State constitutional provisions.**—Article III, Section 15, of the Montana constitution provides as follows:

"The use of all water now appropriated, or that may hereafter be appropriated for sale, rental, distribution, or any other beneficial use, and the right of way over the lands of others, for all ditches, drains, flumes, canals, and aqueducts necessarily used in connection therewith, as well as sites for reservoirs necessary for collecting and storing the same, shall be held to be a public use."[1]

1 See Sec. 1867.

2 Laws, 1911, p. 72.

See, upon the distribution of water, Sec. 1872.

1 For the construction of the above, see State *ex rel.* Coleman v. District Court, 14 Mont. 476, 37 Pac. Rep. 7; Ellinghouse v. Taylor, 19 Mont. 462,

Also, relative to the classification and sale of lands, in Article XVII, Section 1, it is provided: "That any of said lands may be re-classified whenever, by reason of increased facilities for irrigation or otherwise, they shall be subject to different classification."

§ 1866. **Water rights defined, etc.**—The right to appropriate water.—The right to the use of any unappropriated water of any natural stream, water course, spring, dry coulee, or other natural source of supply, and of any running water flowing in the streams, rivers, canyons, and ravines of this State, may hereafter be acquired by appropriation.[1]

"The appropriation must be for some useful or beneficial purpose, and when the appropriator or his successors in interest abandons and ceases to use the water for such purpose the right ceases; but the question of abandonment shall be a question of fact, and shall be determined as other questions of fact.[2]

Tintinger, —— Mont. ——, 122 Pac. Rep. 575.

"As between appropriators the one first in time is first in right."[3]

The State law of appropriation also applies to the State lands of Montana.[4]

**§ 1867. The appropriation of water—Appropriation from adjudicated streams.**—Any person desiring to appropriate water must post a notice in writing in a conspicuous place at the point of intended diversion, stating therein: 1. The number of inches claimed, measured as hereinafter provided. 2. The purpose for which it is claimed and the place of intended use. 3. The means of diversion, with size of flume, ditch, pipe, or aqueduct, by which he intends to divert it. 4. The date of appropriation. 5. The name of the appropriator. A notice must be filed with the county clerk, which, in addition to the facts required to be stated in the posted notice, shall contain the name of the stream, if such stream has a name, and if not, such a description of the point of diversion on such stream, with reference to some natural object or permanent monument. The notice must be verified by affidavit which must state that the matters and facts contained in the notice are true.[1]

Within 40 days after posting such notice the appropriator must commence the construction of his works, and must prosecute the same with reasonable diligence to completion. And a failure to comply with the above provisions deprives the appropriator of the right to the use of the water as against a subsequent claimant who complies therewith, but by complying with these provisions the right to the use of the water shall relate back to the date of the posting of the notice.[2]

The State intended to provide a method for the appropriation of water in addition to that fixed by any custom, and after it was

1 Rev. Codes, 1907, Secs. 4847, 4869. See, also, Murray v. Tingley, 20 Mont. 260, 50 Pac. Rep. 724, 19 Morr. Min. Rep. 137; Floyd v. Boulder etc. Co., 11 Mont. 435, 28 Pac. Rep. 450.

2 Rev. Codes, 1907, Secs. 1848, 1849. See, also, Murray v. Tingley, *supra;* Bailey v. Tintinger, —— Mont. ——, 122 Pac. Rep. 575.

passed an appropriation might be made either by actual diversion or by compliance with its requirements.[3]

The record provided for and records of declarations of rights as provided for, when duly made, shall be taken and received in all courts of the State as *prima facie* evidence of the statements therein contained.[4]

By the Act approved March 9, 1907, provisions were made for the appropriation from adjudicated streams, subject to the decision of the court. A notice must be posted at the point of the intended diversion, stating therein: 1. The flow claimed, expressed in cubic feet per second. 2. The purpose for which said water is claimed and the place of intended use. 3. The name of the stream, creek, spring, canyon, river, or ravine. 4. The name of the appropriator or appropriators. 5. The date of posting said notice. The work must be prosecuted with reasonable diligence, and no appropriator shall acquire any rights to water in excess of the carrying capacity of the ditch, nor in excess of the amount actually needed by the appropriator for some useful or beneficial purpose.[5] Within 40 days from the date of completion of the works, the appropriator shall file with the clerk of the district court in the proper county an application in writing to have such ditch measured and the capacity determined. The clerk upon the receipt of such application shall enter the same of record, and thereupon issue an order directing a competent civil engineer to proceed to measure and determine the capacity of said ditch and to report the results of such measurement, with all data relative to the same, and make returns to the court within 30 days from the receipt of said order. Publication of said application must be made for a period of three weeks, and any person interested in the waters of said stream may file with the clerk written objections to such appropriation. The clerk of the court, immediately after the expiration of the period of publication, on receipt of the report of the surveyor, and proof of publication, shall file the same, and on the first day of the regular or special term of court thereafter, shall present all papers to the court for consideration. If no objections are filed, the court shall enter an order allowing said appropriation. If objections are made, the court shall fix a day for hearing, and on such hearing witnesses may testify, and

3 Bailey v. Tintinger, —— Mont. ——, 122 Pac. Rep. 575.

4 Rev. Codes, 1907, Secs. 4850, 4851.

5 Rev. Codes, 1907, Sec. 4871.

the court after hearing may make any order deemed proper in the premises. All costs and expenses of such proceedings must be paid by the applicant, and the said water right shall be of no force and effect until the same shall have been paid. The clerk of the court must keep complete and accurate record of all surveys and reports made in accordance with the above provisions. A failure to comply with the provisions of the Act deprives the appropriator of the right to such decree, as against a subsequent appropriator who complies therewith. Any person appropriating water under the provisions of the Act shall be subject to, bound by, and shall comply with any decree of the court adjudicating the waters of such stream, as fully and to the same extent as if said person or persons were original parties to the action wherein said decree was made, and any water commissioner, appointed by the court, to distribute waters under any decree shall have jurisdiction over, and shall distribute any waters appropriated under the provisions of the Act, according to priority.[6]

"In all streams, creeks, springs, canyons, rivers, and ravines, in which the water rights therein have not been adjudicated by a court of competent jurisdiction, water shall be appropriated in the same manner as provided by law, at the time of the passage of this Act."[7]

§ 1868. **The adjudication of existing rights.**—The adjudication of existing water rights is left entirely to the courts. And it is provided that in any action for this purpose the plaintiff may make any or all parties who have diverted water from the same stream parties to such action, and that the courts may in one judgment settle the relative priorities and rights of all the parties to such action. When damages are claimed for the wrongful diversion of water in any such action, the same may be assessed and apportioned by the jury in their verdicts, and the judgment thereon may be entered for or against one or more of several plaintiffs, or for or against one or more several defendants. In any action concerning joint water rights, or joint rights in water ditches, unless partition of the same kind is asked by parties to the action, the court shall hear and determine such controversy as if the same were several as well as joint.[1]

[6] Rev. Codes, 1907, Secs. 4871-4880.
[7] Rev. Codes, 1907, Sec. 4869.
[1] Rev. Codes, 1907, Sec. 4852; Beach v. Spokane Ranch Co., 25 Mont. 367,

Decrees adjudicating the rights of a certain stream after the date thereof, in any action relating to such waters, are *prima facie* evidence of the facts therein found.[2] And all appropriations made after such a decree shall be subject to the same.[3] So, also, with appropriations pending litigation.[4]

Subsequent appropriations from streams formerly adjudicated are made and adjudicated in the same proceedings through the court, as discussed in another section.[5]

**§ 1869. Standard of measurement.**—By the Act approved March 3, 1899, it was provided that, "hereafter a cubic foot of water (7.48 gallons) per second of time shall be the legal standard of the measurement of water in this State."[1] "Where water rights expressed in miner's inches have been granted, 100 miner's inches shall be considered equivalent to a flow of two and one-half cubic feet (18.7 gallons) per second; 200 miner's inches shall be considered equivalent to a flow of five cubic feet (37.4 gallons) per second, and this proportion shall be observed in determining the equivalent flow represented by any number of miner's inches. Provided, that the provisions herein shall not affect or change the measurement of water heretofore decreed by a court, but such decreed water shall be measured according to the law in force at the time such decree was made and entered."[2]

And by the Act approved March 9, 1907, it was further provided: "Where water rights have been decreed in statutory or miner's inch measurement, the measurement shall be by cubic feet per second, and 100 miner's or statutory inches shall be equivalent to a flow of two and one-half cubic feet per second, and this proportion shall be ob-

served in determining the equivalent flow of any number of miner's or statutory inches."[3]

§ 1870. **Administrative officers—State engineer.**—The office of a State engineer is created by the statute of Montana,[1] but, as compared with other States, the duties and powers of that official are very much limited and prescribed. He is to be appointed by the Governor and confirmed by the senate, receive a salary of $2500 per annum, and keep his office in the State capitol building.

His powers and duties are prescribed as follows: He is to be the chairman of the Carey Land Act Board; and, with the approval of the State board of land commissioners, he shall examine tracts of land belonging to the State or to State institutions, and ascertain how much of the same it is practicable to irrigate and report to said commissioners the probable cost of an irrigation system for the same; and when directed to do so by said commissioners shall prepare plans and specifications for any irrigation system. He shall become conversant with the waterways of the State and the needs of the State as to irrigation matters, shall make the measurements of stream flow, co-operating as much as possible with the United States Geological Survey, and keep records of the same in his office, all of which is the property of the State. He shall also make a biennial report to the Governor.

§ 1871. **Ditches and canals and rights of way therefor.**—The person entitled to the use of water may change the place of diversion, and may use the water for other purposes than that for which it was originally appropriated, if others are not injured thereby.[1]

See, also, Smith v. Denniff, 23 Mont. 65, 57 Pac. Rep. 557, 24 Mont. 20, 60 Pac. Rep. 398, 50 L. R. A. 737, 81 Am. St. Rep. 408; Helena v. Rogan, 26 Mont. 452, 68 Pac. Rep. 798; *Id.*, 27 Mont. 135, 69 Pac. Rep. 709; Hayes v. Buzard, 31 Mont. 74, 77 Pac. Rep. 423; Columbia M. Co. v. Holter, 1 Mont. 296; Alder Gulch etc. Co. v. Hayes, 6 Mont. 31, 9 Pac. Rep. 581; Meagher v. Hardenbrook, 11 Mont. 385, 28 Pac. Rep. 451; Middle Creek D. Co. v. Henry, 15 Mont. 558, 39 Pac. Rep. 1054; Carlson v. City of Helena, 43 Mont. 1, 114 Pac. Rep. 110; Hansen v. Larsen, 44 Mont. 350, 120 Pac. Rep. 229; Featherman v. Hennessey, 43 Mont. 310, 115 Pac. Rep. 983.

Water may be turned into the channel of a stream and then reclaimed; but in reclaiming it, water already appropriated by another must not be diminished in quantity, or deteriorated in quality.[2]

Provisions are made for the public survey of ditches, upon notice, by a competent civil engineer, and the map made by the surveyor, with his affidavit, shall be filed within thirty days in the office of the clerk and recorder of the proper county and shall be *prima facie* evidence of the facts therein stated in all courts in the State in actions relating to said ditch and water rights.[3]

All water users using water under any decree are required to construct and maintain suitable headgates and measuring devices. And in case of failure to do this, it is made the duty of the water commissioner not to apportion or distribute any water through such ditch.[4]

Highways must be protected by bridges or other works, and the flooding of roads is prohibited.[5]

The right of condemning rights of way for ditches, canals, or other works is given, also for reservoir sites necessary for the collection and storing of water.[6] General condemnation proceedings are provided, applicable to all cases.[7]

§ 1872. **Reservoir rights.**—The right is given to construct reservoirs and to condemn rights of way for the same.[1] "No person shall hereafter fill, or procure to be filled, with water, any dam or reservoir which is not so thoroughly and substantially constructed as that it will safely and securely hold the water to be turned therein.[2]

"No person shall hereafter construct, or cause to be constructed, on a stream, any dam or reservoir to accumulate the waters thereof, except in a thorough, secure, and substantial manner."[3]

3 Rev. Codes, 1907, Sec. 4865.

§ 1873. **The distribution of water.**—In all cases where, by virtue of prior appropriation, there shall be at any time a surplus of the water diverted, "over and above what is actually and necessarily used by the prior appropriators, such appropriator is required to turn such surplus back into the stream for the use of subsequent appropriators; and, upon failure to do so within 24 hours after demand, the person so diverting the water shall be liable to the person injured for the damage resulting therefrom.[1]

By the Act approved February 23, 1911,[2] it is provided that the water of adjudicated rights may be distributed, not by administrative officers as is the case in States which have adopted the law of State control,[3] but by commissioners appointed by the court, which commissioners are officers of such court. It is provided that whenever the rights to the use of water have been adjudicated, upon application of the owners of at least 10 per cent of the water rights affected by any decree or decrees, to the district court having jurisdiction, the court is given the authority, in the exercise of its discretion, to appoint one or more commissioners who shall have authority to measure and distribute the water to the parties entitled thereto as fixed by such decree or decrees. Where two or more commissioners are appointed he may appoint one of them chief commissioner and empower him with authority over the others. Each commissioner so appointed must take an oath of office, and shall hold office during the irrigating season of each year as may be designated by the judge. Authority is given to distribute the water and to incur the necessary expenses in making headgates, such expense to be assessed against the respective parties. And upon the written request of the owners of at least 51 per cent of the water rights of any adjudicated ditch or single water system the court may empower the commissioner to maintain and keep in reasonable repair such water ditch or water system at the expense of the owners thereof. The same powers as sheriff or constable is conferred upon a commissioner to arrest any and all persons interfering with the distribution made by him. Each commissioner must keep a daily record of the amount of water distributed to each water user, and file a summary with the clerk of the court monthly. The judge may

1 Rev. Codes, 1907, Sec. 4844.

2 Laws, 1911, p. 72, repealing Secs. 4881-4889, Rev. Codes, 1907.

3 For the laws of State control, see Chap. 68, Secs. 1337-1367.

allow as a charge any expenses necessarily incurred by the commissioner in the discharge of his duties, in the employment of extra labor when necessary. Such expenses must be reported and shall be taxed against the party or parties for whose benefit the same were incurred. Expenses are also allowed the commissioner in telephoning to the judge for instructions; these expenses to be reported and taxed against the water users in proportion to their relative rights. Upon filing the monthly report of the commissioners, the judge shall make an order apportioning all expenses to the persons using water during such month proportionately. The clerk is to notify each user of his proportion of the costs, which may be modified upon motion. After the order of the court fixing the fees and compensation of the water commissioners is final, it shall have all the force and effect of a judgment as against the person to whom the water was admeasured and for whose benefit it was used. Execution may issue upon the order as upon a judgment. Provisions are made for the judge to hear complaints of the water users, and the judge may give proper instructions for distribution. The judge may remove a commissioner and appoint another at his discretion. If any commissioner shall fail to perform any of the duties imposed upon him by order of the judge of the district court he shall be deemed guilty of contempt of court.[4]

§ 1874. **Corporations and companies.**—Corporations may be organized for the purpose of selling and disposing of water to others. And any one having the right to use, sell, or dispose of water, who has a surplus of water not used or sold, or any person having a surplus of water, and the right to sell and dispose of the same, is required, upon the payment or tender to the persons entitled thereto an amount equal to the customary rates per inch, to convey and deliver to the person such surplus or unsold water. It is made the duty of any person desiring water and to avail himself of the above to construct and maintain the necessary ditches or other works to receive and convey the surplus water so desired by him. Appropriate actions at law or in equity may be brought to enforce

4 See State *ex rel.* Flynn v. District Court, 33 Mont. 115, 82 Pac. Rep. 450; State *ex rel.* Pool v. District Court, 33 Mont. 267, 86 Pac. Rep. 801.

the above provisions. The purchaser can not sell or otherwise dispose of the water so furnished to others.[1]

The Civil Code contains the following sections:

"Any person having the right to use, sell, or dispose of water, and engaged in using, selling, or disposing of the same, who has a surplus of water not used, or sold, or any person having a surplus of water, and the right to sell or dispose of the same, is required, upon the payment or tender to the person entitled thereto an amount equal to the usual and customary rates per inch, to convey and deliver to the person such surplus of unsold water, or so much thereof for which said payment or tender shall have been made, and shall continue so to convey and deliver the same weekly so long as said surplus of unused or unsold water exists and said payment or tender be made as aforesaid.

"Any person desiring to avail himself of the provisions of the preceding section must, at his own cost and expense, construct or dig the necessary flumes or ditches to receive and convey the surplus water so desired by him, and pay the tender to the person having the right to the use, sale, or disposal thereof, an amount equal to the necessary cost and expense of tapping any gulch, stream, reservoir, ditch, flume, or aqueduct, and putting in gates, gauges, or other proper and necessary appliances usual and customary in such cases, and until the same shall be so done the delivery of the said surplus water shall not be required as provided in the preceding section.

"Any person constructing the necessary ditches, aqueducts, or flumes, and making the payments or tenders as hereinbefore provided, is entitled to the use of so much of said surplus water as said ditches, flumes, or aqueducts have the capacity to carry, and for which payment or tender is made, and may institute and maintain any appropriate action at law or in equity for the enforcement of such right or recovery of damages arising from a failure to deliver or wrongful diversion of the same.

"Nothing in the three preceding sections shall be so construed as to give the person acquiring the right to the use of water as therein provided the right to sell or dispose of the same after being so used by him, or prevent the original owner or proprietor from

1 Rev. Codes, 1907, Secs. 4860-4863; Helena etc. Co. v. Lynch, 25 Mont. 497, 65 Pac. Rep. 919.

retaking, selling, and disposing of the same in the usual and customary manner, after it is so used as aforesaid."[2]

In the case of Helena Power Transmission Co. v. Spratt[3] it was held that a foreign corporation authorized by the laws of its domicile to construct a dam and electric power plant on a river in Montana did not have the power of eminent domain.[4] Later in the case between the same parties[5] the constitutionality of the law newly enacted giving this power was upheld.

A corporation to supply water to its stockholders for irrigation and domestic purposes is only liable for injuries caused by its works when guilty of negligence.[6]

§ 1875. **Irrigation districts.**—The statutes of Montana provide for the organization and operation of irrigation districts, largely following the irrigation district laws of California.[1] The organization of such irrigation districts in the State of Montana has always differed from the California Act in this, that under the old law[2] it was provided that the petition should be presented to the county commissioners for that purpose, and that no election was required for the organization of a district, as is usually the case. The county commissioners were granted full powers to organize the same and specify its boundaries upon the presentation of the proper petition.

By the Act of 1909[3] the method for organization is still further changed in this, that the petition is presented to the District Court and the following proceedings had:

Section 1 of the Act provides that a majority in number of the holders of title or evidence of title to lands susceptible of irrigation from the same general source, and by the same general system of works, such holders of title also representing a majority in acre-

3 Laws 1909, Chap. 146, p. 254.

age, may propose the establishment and organization of an irrigation district.

Section 2 provides that the proceedings for the establishment of such district shall be enacted by filing with the clerk of the District Court a petition signed by the requisite number of owners, setting forth (1) the name of the proposed district; (2) a general description of the lands to be included; (3) the names of the owners; (4) the source from which the lands included are to be irrigated, and the character of the works, water rights, canals, and other property which it is proposed to acquire; (5) and a prayer that the lands described be organized as an irrigation district. The petition must be accompanied by a map or plan of the district, and a bond or undertaking, to be approved by the District Court or judge, conditioned to pay all costs of the proceeding in case the organization of the proposed district is not effected.

Section 3 provides that the Court or Judge shall fix the time or place for the hearing of the petition and direct a notice to be given by the clerk by publication in a newspaper in the county and a notice of the same. The clerk is required to mail copies of the petition and notice to all non-resident owners of lands lying within the district.

Section 4 provides that the Court may make adjournments from time to time. And at the hearing all persons interested may appear and contest the necessity or utility of the proposed district or any part thereof. The Court is required to hear and determine whether all the requirements of Sections 1, 2, and 3 of the Act have been complied with, and for that purpose shall hear all competent and relevant testimony. It must determine what lands shall be included and what excluded. If it is found that the petition substantially complies with the requirements of the Act, an order must be made as follows: (1) Setting forth the finding and allowing the petition; (2) establishing the district; (3) giving an accurate description of the lands included; (4) dividing the district into three divisions; and (5) appointing three competent persons as commissioners, one for each division, to conduct the affairs of the district. This order is made conclusive upon all the owners of land in the district, and is "final unless appealed from to the Supreme Court within sixty days from the date of entry." Within thirty days a copy of the order must be recorded with the county

clerk and recorder of the county wherein the lands included within such district are situated. It is further declared that the district so established is a public corporation for the promotion of the public welfare, and that the lands included therein shall constitute all the taxable and assessable property of such district for the purposes of the Act.

The following sections declare the qualifications which the commissioners must possess: Prescribe the manner of their organization; fix their compensation; define their duties and powers; and embody directions as to the course to be pursued in electing commissioners from time to time; in levying taxes for the maintenance of the district or for the purchase or acquisition of such property as may be necessary to effect the purposes of the corporation, and the mode to be pursued in the issuance and sale of bonds whenever it becomes necessary to obtain funds for the immediate use of the district. The provisions of these latter sections, in general, follow those of the California law.[4]

**§ 1876. The Carey Act in Montana.**—The State of Montana comes within the provisions of the Carey Act, has accepted the same, and provided for operation thereunder.[1]

For the purpose of the operation under the Act the Carey Land Act Board is created, consisting of three members, the State Engineer, Secretary of State, and the State Examiner, and of which board the State engineer is chairman. Full powers are granted the board to take all steps necessary to comply with the provisions of the Act of Congress.[2] It is also made the duty of the board to co-operate with the National Reclamation Service where possible.[3] Contracts may be let to construction companies in the usual manner.

When the lands are opened for settlement any citizen of the United States, or a person having declared his intentions, over the age of 21 years, may make application for not to exceed 160 acres. The application must be accompanied with the usual water right contract and 25 cents per acre. The selling price of the land is

4 The Act has been declared constitutional by the Supreme Court of Montana. O'Neill v. Yellowstone Irr. Dist., —— Mont. ——, 121 Pac. Rep. 283.

1 Rev. Codes, 1907, Secs. 2238-2282.
2 Rev. Codes, 1907, Secs. 2255-2282.
3 Rev. Codes, 1907, Sec. 2266.

fixed by the board, and must not be less that 50 cents nor more than $2.50 per acre. The claimant first settling upon the land has the prior right to file upon the same within sixty days after the lands are opened for settlement. The usual lien is given the contracting company to secure the payments for the water right.

§ 1877. **Provisions in aid of the National Reclamation Act.**—The Government of the United States is authorized to appropriate the water of streams within the State of Montana in the same manner and subject to general conditions applicable to the appropriation of waters by individuals. Such appropriations shall be held valid for a period of three years after the filing of the appropriation notice, but shall be null and void after such period unless the work shall have been commenced.[1] The right of condemnation of rights of way and existing ditches, canals, or reservoirs is given as provided by law.[2]

Rights of way are also granted over State lands.[3] Provisions are also made for the disposal of State lands in accordance with the farm units as fixed by the United States, and that no title to lands under such projects shall pass from the State until the purchaser shall produce evidence of the acquisition of the right to the use of water for the irrigation of such lands duly issued by the United States Government.[4]

§ 1878. **The pollution of waters.**—The poisoning of the waters of any well, spring, or reservoir is made punishable by imprisonment in the penitentiary not less than one or more than ten years.[1]

The putting the carcass of any dead animal, or offal of any kind in or upon the banks of any stream, pond, lake, or reservoir from which water is drawn to supply the inhabitants of any city or town is a misdemeanor.[2] The depositing of sawdust, bark, or debris from sawmills is punishable by a fine not exceeding $500.[3] The emptying of any rubbish or filth into a canal, ditch, or reservoir is made a misdemeanor.[4]

1 Rev. Codes, 1907, Sec. 4846.
2 Rev. Codes, 1907, Sec. 4891.
3 Rev. Codes, 1907, Sec. 2212.

3 Rev. Codes, 1907, Secs. 8797, 8798.
4 Rev. Codes, 1907, Sec. 8739.

§ 1879. **Criminal statutes.**—The failure to construct proper bridges over roads, or the injury in anywise of any roads or highways is made punishable for every offense of a fine of not less than $25 nor more than $100; one-half of the fine to go to the benefit of the common schools and the other half to the person informing the nearest magistrate.[1] Also, the overflowing of highways from a ditch is made punishable by a fine not exceeding $100.[2] Every person who shall, without authority of the owner, take water from any ditch, flume, or reservoir, or who interferes with any gate or other appurtenance is guilty of a misdemeanor.[3]

§ 1880. **Riparian rights in Montana.**—The statutes of the State of Montana leave one in doubt as to whether riparian rights are abrogated in Montana or not. Certain it is that the riparian right of an owner to the undiminished flow of a stream, without use, is abrogated, by the very fact that the right of appropriation by non-riparian owners is granted. Again, the decisions upon the subject are by no means decisive. In the first decision upon the subject two of the judges were not able to agree, and the third did not sit in the case.[1] But it seems to be the weight of authority that a riparian owner, by virtue of such ownership, has the right to a use of so much of the water flowing by his lands as he actually applies to a beneficial use or purpose, and that the inception of that right is the inception of his title to the land.[2] The Federal cases upon the subject have left the question entirely to the State, evidently upon the theory that it is the right of the State, either by express statute or by Court decision, to decide this question for itself.[3]

§ 1897. Pollution of waters.
§ 1898. Criminal statutes.
§ 1899. Riparian rights in Nebraska.

**§ 1881. Particular features of the State.**—The State of Nebraska lies wholly within the Great Plains region. In general, as far as the precipitation is concerned, it may be considered semi-arid. In the eastern portion of the State there is plenty of rainfall, and there is seldom a season but that crops can be brought to maturity without the artificial application of water. In the central and western portions of the State there is less rainfall, and here, again, there are often seasons when irrigation is not needed. But in these portions of the State at times there occur a number of seasons in succession when in the summer time there is very little rainfall, and many of the crops are destroyed on account of the drought. The Platte River and its tributaries form the principal water courses in the State. The North Platte, rising in the mountains in Colorado and flowing north through a portion of Wyoming, unites with the South Platte, which also rises in Colorado, in Lincoln County, Nebraska. There are also a number of smaller streams which flow into the Missouri River. The soil of the State is rich and deep and capable of raising immense crops.

§ 1882. **Irrigation in the State.**—Although there are a great many irrigation enterprises in the State of Nebraska, irrigation has been looked upon in that State more as a means of protection in seasons of drought than as an absolute necessity, as is the case in the States that are strictly arid. In seasons of plenty of rainfall the ditches and canals have been allowed to get out of repair, and very little use was attempted to be made of them. Then would come seasons of drought, and perhaps when it was too late there would be a rush to repair the ditches and canals in order to utilize the waters of the streams. At times the works would be repaired only in time to find that there was no water in the streams to fill them. It is this uncertainty that has made the life of irrigation enterprises precarious.[1]

The Carey Act does not apply to the State of Nebraska, the lands not being considered sufficiently arid.

Under the National Reclamation Act the Government has constructed what is known as the North Platte Project. The lands to be irrigated from this project lie in the eastern part of Wyoming and the western part of Nebraska. The Pathfinder Reservoir has been constructed, with an area of 21,774 acres. The irrigable area in Nebraska is 107,000 acres, and 22,000 in Wyoming. The average rainfall on the irrigable area is fifteen inches per annum.[2]

Under the irrigation district law a number of districts have been organized and are in successful operation.[3]

According to the Census Report for 1910 the total number of farms irrigated in 1909 was 1852, as against 1932 in 1899, a decrease of 80, or 4.1 per cent.

The total acreage irrigated in 1909 was 255,950 acres, as against 148,538 acres in 1899, an increase of 107,412 acres, or 72.3 per cent.

1 See Eighth Biennial Report of the State Board of Irrigation, 1908-1910.

2 See the annual reports of the Reclamation Service, subject: Nebraska. See, also, report of Andrew Weiss, project engineer of the North Platte project, in the Eighth Biennial Report of the State Board of Irrigation, 1908-1910, p. 19.

3 For further information upon the subject, see the above reports and Geology and Water Resources of the Republican River Valley and Adjacent Areas, Nebraska, by G. E. Condra, 1907, Water-Supply Paper No. 216, U. S. Geological Survey; Geology and Water Resources of a Portion of the Missouri River Valley in Northeastern Nebraska, by G. E. Condra, 1908, Water-Supply Paper No. 215; Surface Water Supply of Nebraska, by J. C. Stevens, 1909, Water-Supply Paper No. 230.

The total acreage which all enterprises were capable of irrigating in 1910 was 429,225 acres. The acreage included in projects completed or under construction in 1910 was 680,133 acres.

The above acreage under cultivation is classified by the type of enterprise as 30,536 under the United States Reclamation Service, 300 acres under the United States Indian Service, 76,448 under irrigation districts, 78,605 in co-operative enterprises, 24,834 in commercial enterprises, and 45,227 in individual and partnership enterprises.

§ 1883. **Criticism of the Nebraska Laws.**—The laws governing the subject of irrigation and water rights would be considered inadequate in an arid State. There is considerable dissatisfaction expressed relative to the same in the last report of the State board of irrigation.[1] One difficulty appears to be that the authorities have attempted to adhere too closely to the common law doctrine of riparian rights as to the use of the waters of natural streams and at the same time to allow the right of appropriation. In this, as in other States, where there is not a sufficient water supply for all, the right to the use of the waters of natural streams should be based upon the actual applications of the water to some beneficial use or purpose. The law also has been defective as to abandoned projects. Upon this subject the last report of the State board of irrigation has this to say: "More than 500 claims for water previous to the law of 1895 have been adjudicated. In several cases no physical work has been performed. Upon perhaps one-fourth of this number excavation and construction has not been prosecuted beyond turning a few furrows. Few, if any, can be considered fully completed. Vast areas of land, aggregating thousands and thousands of acres, have been listed in these claims, to which water has never been applied; yet, under the law, this land can not be included in any other application, and the board is powerless to grant relief. The Attorney-General should be directed to institute proceedings in the proper courts to remove this restriction. Claimants who can not, or will not, water the land listed in the appropriations should be forced to step aside and give some one else a chance."[2] But by

1 See Eighth Biennial Report, 1908-1910.

2 Eighth Biennial Report, *supra*, p. 25.

the Act of the legislature approved April 10, 1911,[3] a procedure was provided for the forfeiture of abandoned rights, and thus following the recommendations of the State board.

The listing of private lands and giving a person or corporation to whom an appropriation has been allowed the exclusive right to irrigate such lands is wrong in principle. It gives the appropriator an interest in such lands without the consent of the owners of the title.

The irrigation district law in Nebraska has given considerable satisfaction. As stated by the State board of irrigation in their last report: "The district irrigation system, properly conducted, is one that is the most permanent and economical and the one which experience has shown will, in time, control the most of the irrigation in this State."[4] The law, however, is defective in not having sufficient State control, and some power to determine the feasibility of such projects for the protection of all parties interested.[5]

**§ 1884. Water rights—Defined—Title to water—Priority.**—The State constitution of Nebraska contains nothing upon the subject of irrigation or water rights.

It was declared by the Act of 1895, upon the subject of the title to the water within the State: "The water of every natural stream not heretofore appropriated within the State of Nebraska is hereby declared to be the property of the public, and is dedicated to the use of the people of the State, subject to appropriation as hereinbefore provided.[1]

"Any canal constructed for the purpose of developing power or any other useful purpose, and from which water can be taken for irrigation, is hereby declared to be an irrigation canal, and all laws relating to irrigation canals shall be deemed applicable thereto.[2]

3 Laws, 1911, p. 503; Comp. Stats., 1911, Sec. 6426, Chap. 93a, Art. II, Sec. 18.

4 Eighth Biennial Report, *supra*, p. 24.

5 For irrigation districts in Nebraska, see Sec. 1896.

1 Comp. Stats. 1911, Sec. 6450, Chap. 93a, Art. II, Sec. 42; Laws, 1895, Chap. 69, p. 260, Sec. 42.

That the use of water for irrigation is a public use, see Paxton etc. Co. v. Farmers' etc. Co., 45 Neb. 884, 64 N. W. Rep. 343, 29 L. R. A. 853, 50 Am. St. Rep. 585.

2 Comp. Stats. 1911, Sec. 6401, Chap. 93a, Art. I, Sec. 2a.

See, also, State *ex rel.* Patterson v. County Commrs. of Douglas Co., 47 Neb. 428, 66 N. W. Rep. 434.

"The right to divert unappropriated waters of every natural stream for beneficial use shall never be denied. Priority of appropriation shall give the better right as between those using water for the same purposes, but when the waters of any natural stream are not sufficient for the use of all those desiring the use of the same, those using the water for domestic purposes shall have the preference over those claiming for any other purpose, and those using the water for agricultural purposes shall have the preference over those using the same for manufacturing purposes.[3]

"All appropriations for water must be for some beneficial or useful purpose, and when the appropriator or his successors in interest ceases to use it for such purpose, the right ceases."[4]

All ditches constructed for the purpose of utilizing waste, seepage, swamp, or spring waters of the State are governed by the same laws relative to priority as other ditches: Provided, that the person upon whose lands such waters first arise shall have the prior right to the use of the same for all purposes upon his lands.[5]

"Canals and other works constructed for irrigation or water power purposes, or both, are hereby declared to be works of internal improvement, and all laws applicable to works of internal improvement are hereby declared to be applicable to such canal and irrigation works.[6]

[3] Comp. Stats. 1911, Sec. 6451, Chap. 93a, Art. II, Sec. 43.

"Water for the purpose of irrigation in the State of Nebraska is hereby declared to be a natural want."[7]

§ 1885. **Administrative officers.**—In general, as to the division of the State and the administrative officers controlling, determining the right to the use and distribution of waters, the State of Nebraska follows the scheme of the State of Wyoming, hereinafter discussed.[1]

*State Board of Irrigation, Highways, and Drainage.*—At the head of the system is the State board of irrigation, which is composed of the Governor, Attorney-General and the Commissioner of Public Lands and Buildings. The duties of this board are similar to the duties of the board of control in Wyoming.[2] The Governor is the president of the board, the office of which is to be at the State Capitol. The secretary of the board is the State engineer. By the Act approved March 29, 1911, the board was also declared to be the State board of supervision for bridges.[3] And by the Act approved April 8, 1911, the name of the board was changed from that of State board of irrigation to the above,[4] both of which Acts conferred additional duties.[5]

*State Engineer.*—The State board is empowered to elect a secretary, who shall be a civil engineer of general theoretical knowledge and practical skill and experience, who shall be known as the State engineer. He shall hold office for a term of two years, and be paid a salary of $2500 per annum. The secretary, by and with the con-

5 Comp. Stats. 1911, Sec. 6412, Chap. 93a, Art. I, Secs. 4-10; as amended, Laws 1911, pp. 498-500.

See, also, Crawford Co. v. Hathaway, 60 Neb. 754, 84 N. W. Rep. 271; *Id.*, 61 Neb. 317, 85 N. W. Rep. 303; *Id.*, 67 Neb. 325, 93 N. W. Rep. 781, 60 L. R. A. 889; Cummings v. Hyatt, 54 Neb. 35, 74 N. W. Rep. 411.

sent of the board, shall have the power to employ an assistant State engineer, to draw a salary of $1500 per annum.[6]

*Division Superintendents.*—The State is divided into two water divisions, the boundaries of which are given.[7] There is one superintendent for each water division, elected by the board; said superintendents to be paid a salary of $6 per day for every day actually consumed in the performance of their duties. "The superintendent of each water division acting for the State board shall have the immediate control and direction of the acts of the water commissioners and of the distribution of water in his water division."[8]

By the Act approved April 8, 1911,[9] it was provided that every person, corporation, or association owning or controlling any irrigation works must furnish, by the first of April of each year, the superintendent of each division a list of all lands to be watered through each headgate and measuring device. The superintendent shall use such lists and reports as a basis in the distribution of waters until the first of April of the year following.

*Water Commissioners.*—The State board is required to divide each water division into subdivisions, the boundary lines of which shall conform to the division lines of watersheds. For each district there shall be appointed by the board one water commissioner for a term of two years, at a salary of $5 per day for the time actually engaged in such duties. It is made the duty of the water commissioner to divide the waters of his district according to the priority of each claimant, under the direction of the division superintendent.[10]

**§ 1886. The measurement of water—Standard of measurement.**—It is made the duty of the State engineer, as soon as practicable, to measure the quantity of water flowing in the streams of the State and to keep a record thereof.[1]

9 Laws 1911, p. 522.

10 Comp. Stats. 1911, Secs. 6441-6444, Chap. 93a, Art. II, Secs. 33-36; as amended, Laws 1911, pp. 511, 512.

1 Comp. Stats. 1911, Sec. 6425, Chap. 93a, Art. II, Sec. 17; as amended, Laws 1911, p. 502.

"The standard of measurement for flowing water shall be a cubic foot per second of time, both for determining the flow of water in natural streams and for the purpose of distributing therefrom when appropriations have been made for direct flow. The standard of measurement of the volume of water shall be an acre-foot, equivalent to 43,560 cubic feet, and when water is stored in any natural or artificial reservoir, it shall be used for determining the capacity of such storage reservoirs, the amount stored and the amount used therefrom. What is known as the miner's inch shall be regarded as one-fiftieth of a cubic foot per second in all cases." [2]

**§ 1887. The appropriation of water.**—"The United States of America and every person, association, or corporation hereafter intending to appropriate any of the public waters of the State of Nebraska shall, before commencing the construction, enlargement, or extension of any works for such purpose, or performing any work in connection with the same, or before taking any water from any constructed works, make an application to the State board for a permit to make such appropriation." The proceedings upon such application are similar to those in Wyoming.[1]

"If there is unappropriated water in the source of supply named in the application, and if such appropriation is not otherwise detrimental to the public welfare, the State board, through its secretary, shall approve the same." If there is no unappropriated water, or if a prior appropriation has been made to water the same land, the application shall be refused. If approved, the usual certificate must be issued to the appropriator. The date of the priority of such appropriation shall be from the filing of the application.[2]

By the Act approved April 8, 1911,[3] a further appropriation may be made for lands which already have an appropriation, but which, in times of scarcity, have not enough water to supply their needs. Such appropriations are made in the same manner as above. Right of appeal from the decision of the board is allowed to the proper District Court.

1 See Secs. ——.

2 Comp. Stats. 1911, Secs. 6436-6439, Chap. 93a, Art. II, Secs. 28-31; as amended, Laws 1911, pp. 507-510.

See, also, Farmers' Irr. Dist. v. Frank, 72 Neb. 136, 100 N. W. Rep. 286; Radford v. Wood, 83 Neb. 773, 120 N. W. Rep. 458.

3 Laws 1911, p. 493.

Upon the subject of the prosecution of the work to perfect an appropriation, it is provided that within six months after the approval of an application the construction of the work must be commenced, and the work must be prosecuted vigorously, diligently, and uninterruptedly to completion, unless interrupted by some unavoidable and natural cause, and a failure to comply with this section shall work a forfeiture of the appropriation and all rights thereunder.[4]

§ 1888. **Determination of existing priorities.**—The determination of all existing water rights is left entirely to the State board, both as to the method and amount of the appropriation, in the following language:

"It shall be the duty of the State board to make proper arrangements for the determination of priorities of right to use the public waters of the State and determine the same. The method of determining the priority shall be fixed by said board."[1] The method pursued in this respect has been discussed in a previous chapter.[2]

A complete record must be made and kept by the board of all adjudications.[3]

Each appropriation must be determined in its priority and amount, by the time at which it was made, and the amount of water which the works are constructed to carry: Provided, that such appropriator shall at no time be entitled to more water than he can beneficially use: Provided, that no allotment for irrigation shall exceed one cubic foot per second of time for each seventy acres nor three acre-feet in the aggregate during one calendar year for each acre of land; "neither shall it exceed the least amount of water that experience may hereafter indicate as necessary for the production of crops in the exercise of good husbandry."[4] Within thirty days after the determination of the priorities it is the duty of the board to issue a certificate to the owner. An appeal may be had

See opinions, Atty.-Gen., 1901-2, p. 310.

from the order of the board to the District Court of the proper county in the manner provided by the law.[5]

§ 1889. **Proceeding for the forfeiture of rights.**—Following the recommendations of the State board, the Act of the legislature approved April 10, 1911,[1] provided that when the use for which an appropriation was made ceased, that the right ceased. It was also made the duty of the State board to examine into the condition of every water appropriation in the State, and into the condition of all ditches and canals constructed or partially constructed, and if it appears that any appropriation in the State has not been used for some useful purposes, or having been used at one time has ceased to be used, then, in that case, the State board shall appoint a place and time of hearing, and shall serve notice upon the parties interested to show cause at such time and place why such appropriation should not be declared forfeited and annulled. And if it appears that such appropriation has not been used, as above stated, the same shall be declared canceled and annulled. An appeal may be taken in such cases from the decision of the board to the District Court of the proper district.

§ 1890. **Reservoir rights.**—Reservoir rights are granted by the statute under applications for a permit for the same as in other cases.[1] Upon the approval of such application the applicant is given the right to impound any and all water not otherwise appropriated, and may condemn rights of way as in other cases.[2] "The owner or owners of such storage reservoirs shall be liable for all damages arising from leakage or overflow of the water therefrom or from the breaking of the embankment of such reservoir." The water from reservoirs may be turned into the natural stream and again taken out, "less a reasonable deduction for seepage and evaporation, to be determined by the State engineer, provided no prior appropriator for beneficial use shall be prejudiced by such diversion.

5 Comp. Stats. 1911, Secs. 6428-6435, Chap. 93a, Art. II, Secs. 20-27; as amended, Laws 1911, p. 506.

1 For the appropriation of water, see Sec. 1887.

2 For condemnation proceedings, see Sec. 1892.

Rights to the use of the water by consumers may be acquired by applications to the State board.[3]

§ 1891. **Distribution of water.**—The division superintendents and water commissioners are given the authority to supervise the distribution of water in the State between the different ditches and canals.[1] It is also provided that it is the duty of the owners of the main ditches and canals to appoint a superintendent, whose duty it shall be to measure the water through the outlets of such ditches to all those who are entitled to the use of the same. In case no such appointment is made the State engineer may make it. It is also made the duty of every person entitled to take water from any ditch to see that he receives no more water than he is entitled to. And if he knowingly permits such extra water to come to his land from such works, he is made liable in damages to any person who shall be injured by such extra appropriations of water.[2]

§ 1892. **Ditches and canals—Rights of way—Condemnation proceedings.**—Rights of way are granted over State lands or over, through, and across any highway in the State without compensation: Provided, that bridges or crossings over such ditches or canals are constructed at the expense of the owner.[1] A right of way is also given to conduct water into or along any of the natural streams of the State, due allowance being made for evaporation and seepage, and subject in all cases to the State board.[2]

The right of condemnation is also given all persons, companies, or associations of rights of way over the private lands of others for all ditches, canals, or other works of this nature, and full proceedings provided therefor.[3]

"No tract of land shall be crossed by more than one ditch, canal,

or lateral without the written consent and agreement of the owner thereof if the first ditch, canal, or lateral can be made to answer the purpose for which the second is desired or intended."[4]

By the Act approved April 8, 1911, the right was granted to procure rights of way for laterals across intervening lands and irrigation canals.[5]

The point of diversion may be changed and extensions may be made to other lands, provided others are not injured thereby, upon petition to the State board.[6] The line of the ditch or canal must not be changed so as to interfere with the use of its waters by those entitled thereto, without rendering the owner liable to damages.[7] Substantial bridges must be constructed at the expense of all ditch owners at the intersection of the same and roads;[8] also bridges must be made for the convenience of land owners, and also sufficient outlets in the ditches for the delivery of water, with substantial headgates, and measuring devices must be constructed.[9]

"All ditches, canals, laterals, or other works used for irrigation purposes shall be exempt from all taxation, whether State, county or municipal."[10]

**§ 1893. Irrigation corporations and companies—Duties and powers of.**—Corporations or associations may be organized under the general laws of the State of Nebraska for the express purpose of constructing and operating canals, reservoirs, and other works for irrigation and water power purposes. They are given the power to borrow money and to mortgage their property and franchises in the same manner and for the same purpose as railroad corporations.[1] Mutual irrigation companies may be organized, where there

is no purpose of deriving a revenue, but for the purpose of irrigating the lands of its shareholders.[2] Any corporation or association may, through its board of directors, assess the shares, stock, or interest of the stockholders for the purpose of obtaining funds to defray the necessary running expenses.[3]

"Irrigation works constructed under the laws of this State are hereby declared to be common carriers."[4]

By the Act approved April 10, 1911,[5] it was provided that the owner or operator of any works for the storage, carriage, or diversion of water, except irrigation districts, must deliver all water legally appropriated to parties entitled to the use of the same for beneficial purposes, at a reasonable rate, to be fixed by the State railway commission, according to the law relating to common carriers.

**§ 1894. Sale and conveyance of water rights.**—"Whenever any person, persons, or corporation owning any irrigation ditch or canal shall convey by deed or contract the right to use the water from such ditch or canal for any tract of land for irrigation purposes, such deed or contract shall be recorded in the county where such land is situated, in the same manner and under the same conditions as deeds for real estate are recorded. And such deed or contract, from the date of recording thereof, shall be binding upon the grantor of such deed or contract, his, their, or its successors or assigns, and all persons, companies, or corporations claiming any interest in such ditch or canal, and no foreclosure or other proceedings to collect money from or to subject the sale of the property of the owners of such ditch or canal shall in any manner impair the right of such grantee, his heirs, administrators, or assigns to the use of the water from such ditch or canal in the quantity and manner provided in such deed or contract."[1]

1 Compiled Stats. Neb. 1911, Sec. 6471.

§ 1895. **Provisions in aid of the National Reclamation Act.**—By the Act approved April 10, 1911,[1] rights are given to the United States to appropriate, develop, and store any unappropriated waters within the State: Provided, that when it is determined by the officers of the Reclamation Service that any water so developed or stored is in excess of the needs of the project, it shall be lawful for the United States to enter into contracts to rent or sell such water under the terms and conditions imposed by Act of Congress and the rules and regulations of the United States to any person, association, firm, or corporation who have theretofore been granted a permit to appropriate water.

Rights of way are also provided for over all State lands for the construction of the necessary works for these projects.[2] Also, provision is made for the organization of water users' associations.[3]

§ 1896. **Irrigation district law in Nebraska.**—Nebraska is one of the States which has adopted the irrigation district law,[1] taking the same largely from that of California, with the more important amendments.[2] In this section we will discuss only such phases of the Nebraska district law as are peculiar or that have been construed by the Court.

Upon the subject of the organization of such districts the statute provides that: Whenever a majority of the electors "owning not less than ten acres of land or holding leasehold estates of not less than 40 acres" susceptible of irrigation from a common source and by the same system of works they may present a petition to that effect to the board of county commissioners, the organization of the district is then proceeded with in the usual manner.[3]

After the organization of the board such board has the power to

enact by-laws, rules, and regulations for the distribution and use of the water.

"It is hereby expressly provided that all waters distributed for irrigation purposes shall be apportioned ratably to each land owner upon the basis of the ratio which the last assessment of such owner for district purposes within said district bears to the whole sum assessed upon the district, and the water right so above apportioned shall attach to and follow the tract of land to which it is so apportioned either under lease or sale."

Provisions are also made for the exclusion of lands which become sub-irrigated.[4] The board is given the power to acquire, by purchase or otherwise, or by the right of eminent domain, all necessary rights of way, works already constructed, and water rights.[5] Money may be borrowed by the district after the same has been properly organized, and bonds voted therefor and sold as provided.[6] "Said bonds, and the interest thereon, shall be paid by revenue derived from an annual assessment upon the real property of the district, and all the real property of the district shall be and remain liable to be assessed for such payments as herein provided." Town lots are also included.[7] These assessments may be levied and collected in the usual way. Contracts may be let for the construction of the necessary works.[8] The board of directors or other officers of the district are prohibited from incurring any debt or liability in excess of the express provision of the Act. Any district is given the authority to drain lands sub-irrigated by reason of the lawful use of

the water from its canals.[9] In times of high water it is made the duty of the board of directors to keep the water flowing through the ditches and canals to their full capacity, when the water can be applied beneficially to the lands thereunder. It is further provided that upon the filing of a petition signed by a majority of the land owners requesting that certain rules and regulations be adopted it becomes the duty of such board to provide for the adoption and enforcement of the same upon the following subjects: Automatic measuring devices both at the main gate and laterals; also for the interchange of water from one tract to another.[10] Provisions are made for the changing of the boundaries of districts.[11] Also, provisions are made for the disorganization of districts.

By the Act approved April 8, 1911,[12] it was provided that irrigation districts shall be liable in damages for negligence in delivering or failure to deliver water to the users from its canal to the same extent as private persons and corporations.

§ 1897. **Pollution of waters.**—Any person erecting any dam or other obstruction in any stream causing stagnant water thereby, which is injurious to the public health, is punishable by a fine not exceeding $500.

Putting the carcass of any animal in any spring, branch, or stream is punishable by a fine of not less than $2 nor more than $40.

The putting or leaving any offensive matter of any kind in any creek, river, bay, pond, or canal is punishable in any sum of not less than $1 nor more than $50. And if such nuisance is not abated within twenty-four hours after notice to abate the same, it is deemed a second offense, and every like neglect of each twenty-four hours thereafter is considered an additional offense.[1]

§ 1898. **Criminal statutes.**—Every officer of any corporation or association, or person owning or in control of any ditch, reservoir,

or other device, for appropriating or using water, and any person who shall wilfully open or close, change or interfere with any head-gate or controlling gate, or by any method or means take any water, without authority of the State board, shall be deemed guilty of a misdemeanor, and on conviction thereof be fined in any sum not less than $100 nor more than $1000, or imprisonment in the county jail not exceeding six months, at the discretion of the Court, and an additional fine of $500 for each day that the water is so allowed to run.[1]

Any superintendent having charge of a ditch or canal used for irrigation purposes who shall neglect or refuse to deliver water as in the Act provided, or any person who shall prevent or interfere with the proper delivery of water, is guilty of a misdemeanor.[2]

The flooding of roads subjects the owner of the works to a penalty of $10 per day for each day such road is obstructed by water.[3]

The wasting of mutual artesian waters is prohibited under severe penalty.[4]

§ 1899. **Riparian rights in Nebraska.**—As regards the common law of riparian rights in the State of Nebraska the California rule is adhered to, that the two doctrines of water rights, one the right of a riparian proprietor and the other the right of appropriation and application of the water to a beneficial use by a non-riparian owner, may exist and do exist concurrently in the State.[1] It is

therefore held that a riparian owner's right to the use of the flow of a stream passing through or by his land is a right inseparably annexed to the soil, not as an easement or appurtenance, but as a part and parcel of the land; such right being a property right and entitled to protection as such, the same as private property generally; that the legislature has not abolished, nor does it possess the power to abolish, the right of riparian proprietors which have become vested, except as such rights may be taken or impaired for a public use in the exercise of the power of eminent domain, for which compensation must be paid.[2]

**§ 1900. Particular features of the State.**—The State of Nevada lies almost wholly within the "Great Basin," which also extends on the east beyond Nevada, and includes nearly one-half of the State of Utah, as well as small portions of Idaho and Wyoming. The Great Basin, as the name implies, comprises a vast area, characterized by the fact that within its rim are no surface streams which empty their waters either into the ocean or into other streams which flow to the ocean. The precipitation falls within irregular lines throughout the State, depending largely upon the topography. The Great Basin is by no means a single broad valley. On the contrary, it is broken by irregular mountain ranges, which rise abruptly from nearly level plains. Streams of water issue from some of these mountain ranges and flow down into the plains below,

which are, for the most part, the bottoms of ancient lakes, in which thick deposits of gravel, sand, and clay have accumulated. These streams are small, and empty into saline lakes, or sink into the ground and disappear. The precipitation varies according to locality from four inches to much higher in the upper altitudes. Over hundreds and even thousands of square miles of lower mountains and arid plains there may not be any precipitation at all during the greater portion of the year. The climate is hot and dry in the daytime, although the nights are generally cool. The altitude ranges from about 4,000 to 11,000 feet above the sea.

The rivers and streams of the State are small, and those which flow continuously throughout the year may be regarded as exceptional. The Truckee, Carson, Walker, and Humboldt Rivers comprise practically the main water supply of the State. There are, however, many small streams and many springs, both hot and cold. These are all utilized to the greatest possible extent. The soil in many places is good and adaptable to the many crops usually grown in a temperate zone. In many places, however, the soil is impregnated with alkalies to such an extent as to render it almost valueless. The winters, as a general thing, are mild in the valleys, with, however, considerable cold in the higher altitudes. The entire State may be said to lie strictly within the arid region of the country.

§ 1901. **Irrigation in the State.**—Owing to the scanty water supply, the topography of the State, being a succession of ranges of mountains, and the great tracts of alkali soil, upon which nothing at all can be grown, the cultivation of land by means of irrigation in the State of Nevada may be described as patchy. There are a number of localities in the State, however, which have been developed to a very high degree. But out of 70,233,600 acres of the land comprised in the State of Nevada, only about 800,000 acres are improved, and but about 90 per cent of this area is irrigated. In 1900 there were 504,168 acres irrigated, but this area has been increased considerably since. The trouble has been in the past that, owing to the large area of the State and its small and scattered water supply, much of which comes from springs, the ranches and farms are at considerable distance from each other, except on the western border. Whenever a spring of water has appeared in the broad, barren valleys of the State some ranchman has bought or

has taken up a small tract of land, sufficient to cover the source of the water, and, owning this, he can practically control thousands of acres of grazing land and at the same time he irrigates but a small tract of his land. As for the cultivation of lands without the means of irrigation, except in a few small and favored localities, it is practically out of the question. Even dry farming, under the new scientific methods, is not considered a success, owing to the fact of the insufficient rainfall during the winter and spring seasons. Again, owing to the multiplicity of small ditches taking their water from the small streams, many conflicts have in the past arisen between the irrigators as to the distribution of the water, especially during the summer season when the supply was reduced. Disputes of this character have been sometimes settled by private agreements, but more often recourse has been had to the courts. The expense of lawsuits for the adjudication and protection of water rights has been a heavy burden to the farmer and tended to a widespread complaint of the insecurity of property. As the land is practically worthless without a water right, the main value depends upon an unimpeachable claim to sufficient water to irrigate. If this claim is liable to be called in question, the value of the property will fluctuate correspondingly. Up to a recent period irrigation has grown up in the State without any order or system, each man or group of irrigators taking all the water to be had, regardless of the use of the same, and caring little for the needs of others. The chief interest of the State has been in mines, and until during the last fifteen years very little attention has been given to the development of agriculture, so that wasteful methods of water distribution have grown up and fastened themselves upon the communities, and the legislature was slow to adopt new laws for radical improvements along these lines.[1]

Now, with a comprehensive water right law, with the acceptance of the provisions of the Carey Act, and with the operations of the Government under the National Reclamation Act, irrigation development in the State of Nevada within the next decade is liable to progress more rapidly. The State is just entering upon its storage period of this development. There are many reservoir sites throughout the State, and in many localities plenty of flood waters to fill them, and vast tracts of fertile land needing the water. But

1 For criticism of the Nevada law, see Sec. 1902.

as all of the water flowing in the natural surface streams has been long since appropriated, the only method of an extended development of agriculture by the means of irrigation is by the construction of reservoirs and storing the flood waters now permitted to run to waste.

The Government, under the provisions of the National Reclamation Act, at this date has completed a portion of the Truckee-Carson project, and the land is rapidly being settled upon. With the entire project completed, it is contemplated to irrigate 206,000 acres. Under the first unit there are 90,723 acres. During the season of 1909 there were 32,000 acres irrigated. Besides this, there is the Walker River project proposed.[2]

Owing to the fact that the State did not accept the provisions of the Carey Act until 1909, very little has been accomplished in this direction.[3]

According to the United States Census Report for 1910 the total number of farms irrigated in 1909 was 2,406, as against 1,906 in 1899, an increase of 500, or 26.2 per cent.

The total acreage irrigated in 1909 was 701,833 acres, as against 504,168 in 1899, an increase of 197,665, or 39.2 per cent.

The total acreage which all enterprises were capable of supplying with water in 1910 was 840,962 acres. The acreage included in projects, either completed or under construction in 1910, was 1,232,142 acres.

The acreage irrigated in 1909, classified by type of enterprise, was: United States Reclamation Service, 30,000 acres; United States Indian Service, 2,597 acres; co-operative enterprises, 78,966 acres; commercial enterprises, 8,864 acres, and individual and partnership enterprises, 581,406 acres. It will be noticed from the

2 For the National Reclamation Act, see Chap. 65, Secs. 1235-1286.

3 For the Carey Act, See. Sec. 1918.

For the general discussion of the Carey Act, see Chap. 67, Secs. 1312-1336.

See, also, upon the general subject the biennial report of the State engineer of Nevada, Emmet D. Boyle, State Engineer, 1910-1911; Surface Water Supply of the Great Basin Drainage, 1906, Water-Supply Paper No. 212, by E. C. La Rue, Thomas Grieve, and Henry Thurtell, U. S. Geological Survey, 1908; Water Storage in the Truckee Basin, Water-Supply Paper No. 68, by Taylor, U. S. Geological Survey, 1902; The Great Basin, 1911, by E. C. La Rue and F. F. Henshaw, Water-Supply Paper No. 270, U. S. Geological Survey.

above that no acreage is reported under Carey Act projects or irrigation districts.

§ 1902. **Criticism of the Nevada laws.**—Our criticism of the Nevada laws does not extend so much to the present laws as they now exist, but to the great delay of the legislature in the enactment of any laws. In this respect matters were permitted to run to loose ends for a great many years. It was not until 1907 that a comprehensive water law was adopted by the legislature; and it was not until 1909, fifteen years after the passage of the Carey Act by Congress, that the legislature of the State of Nevada saw fit to accept its provisions, and to provide for operation thereunder.[1]

The powers given to the State engineer may be considered by some to be too great to intrust to the hands of one man. They are even greater than those granted to the State engineer of Wyoming, in that he has the arbitrary power to determine existing rights upon his own personal examination and the verified statements of the claimants upon the stream, the rights of which he is determining. The saving clause, however, is that his determination must be of record, and the right is given any dissatisfied party to bring an independent action in the court, and have the whole subject adjudicated by the Court. Resort is also had to the criminal statutes against any person failing after notice to make out and send the State engineer his statement of claim.

With the new irrigation district law[2] and the new law accepting the provisions of the Carey Act, and a detailed plan for its operation within the State,[3] as well as the main features of the Irrigation Code of 1907, we can find no great fault. At least, they are much better than the State had before.

§ 1903. **State constitution—Water rights—Standard of measurement.**—There are no constitutional provisions relating to waters in the State of Nevada.

From the time of the Act of March 3, 1866, the legislature of the State of Nevada from time to time passed certain Acts attempting to regulate and control the appropriation of waters within the

1 For the Carey Act in Nevada, see Sec. 1918.

2 See Sec. 1919.

3 See Sec. 1918.

State.[1] But it was not until the Act of the legislature, approved February 26, 1907, that a comprehensive water code was enacted, which Act also created the office of State engineer.[2] This code was also amended in 1909 to a considerable extent.[3]

Upon the subject of water rights and the appropriation of water within the State the Act of 1907, as amended by the Act of 1909, provides:

"Section 1. All natural water courses and natural lakes, and the waters thereof which are not held in private ownership, belong to the State and are subject to appropriation for beneficial uses.

"Sec. 2. All existing rights to the use of water, whether acquired by appropriation or otherwise, shall be respected and preserved, and nothing in this Act shall be construed as enlarging, abridging, or restricting such rights.

"Sec. 3. There is no absolute property in the waters of a natural water course or natural lake. No right can be acquired to such waters, except a usufructuary right—the right to use it or to dispose of its use for a beneficial purpose. When the necessity for the use of water does not exist, the right to divert it ceases, and no person shall be permitted to divert or use the waters of a natural water course or lake, except at such times as the water is required for a beneficial purpose.[4]

1 For Act of 1866, see Laws Nevada, 1866, p. 202; Gen. Stat. 1885, p. 108.

For the general construction of the Act of 1866, see Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Dalton v. Bowker, 8 Nev. 190; Mosier v. Caldwell, 7 Nev. 363; Lake v. Tolles, 8 Nev. 285; Brown v. Ashley, 16 Nev. 311, 13 Nev. 251; Strait v. Brown, 16 Nev. 317, 40 Am. St. Rep. 497; Barnes v. Sabron, 10 Nev. 217, 4 Morr. M. Rep. 673.

2 For the full text of the Act of 1907, see Laws Nevada, 1907, p. 30, Secs. 1-34.

3 See Laws Nevada, 1909, p. 31, Secs. 1-11; Rev. Laws Nevada, 1912, Secs. 4672-4705.

4 For the subject of the appropriator's right being limited to the amount actually beneficially used, see Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 280, 89 Pac. Rep. 289; Berry v. Equitable etc. Co., 29 Nev. 451, 91 Pac. Rep. 537; Simpson v. Williams, 18 Nev. 432, 4 Pac. Rep. 1213; Roeder v. Stein, 23 Nev. 92, 42 Pac. Rep. 867; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Rodgers v. Pitt, 89 Fed. Rep. 420, 129 Fed. Rep. 932; Gotelli v. Gardelli, 26 Nev. 382, 69 Pac. Rep. 8.

A prior appropriator of water for irrigation did not employ a reasonable and economical method of diverting the water where he permitted two-thirds of the water diverted to become lost in a swamp without any good excuse therefor, and such surplus water was subject to appropriation by a sub-

"Sec. 4. No person shall be permitted to divert or use any more of the waters of a natural water course or natural lake than sufficient, when properly and economically used, to answer the purpose for which the diversion is made; nor shall any person be permitted to waste any such water, and all surface water remaining after use, unavoidable wastage excepted, shall be returned to the channel by the persons diverting the same without unreasonable delay or detention.

"Sec. 5. (As amended by the Act of 1909, Section 1.) The maximum quantity of water which may hereafter be appropriated for irrigation purposes in the State of Nevada shall be as follows: In all parts of the State where the water can not be beneficially used for irrigation for a greater period than six months each year, the maximum quantity appropriated for each acre shall not exceed three acre-feet per annum. In all parts of the State where water is beneficially used for irrigation for a period of nine months or more in each year, the maximum quantity of water that may be appropriated shall not exceed three acre-feet for the five months beginning May 15th and extending to October 15th of each year for each acre of land supplied, and the maximum quantity of water that may be appropriated for each acre during the remainder of each year shall not exceed one-half of one acre-foot multiplied by the number of months of each year other than the five months hereinbefore named during which water is so beneficially used.

"Sec. 6. In all measurements of water in this State a cubic foot of water per second of time shall be the standard of measurement.

"Sec. 7. The prior right to the use of the unappropriated waters of the natural water courses and natural lakes, as defined in this Act, may be acquired in the manner provided in this Act, and not otherwise." [5]

**§ 1904. Administrative officers—State board of irrigation.**—Under the Act of the legislature approved March 16, 1901,[1] there was created a State board of irrigation, consisting of the Governor, Surveyor-General, and the Attorney-General. By the Act of February 26, 1907, the State engineer was also made a member of the

sequent appropriator. Doherty v. Pratt, —— Nev. ——, 124 Pac. Rep. 574.

5 Laws Nevada, 1907, p. 30, Secs. 1-7; Rev. Laws Nevada, 1912, Secs. 4672-4678.

1 Laws Nev., 1901, p. 72.

board, and the Act also provided that he should keep the record thereof in his office.[2] It is made the duty of this board to subdivide the State into water divisions and districts, as may seem to it to be advisable, and may change the same from time to time. It may appoint water commissioners and fix their compensation.[3] The board of irrigation may make such rules and fix such penalties as it shall deem advisable for the proper and economical administration of the waters of the State.[4] It is also made the duty of the board to determine the irrigation possibilities of the State, and the best methods of controlling the water resources of the State in co-operation with the United States Geological Survey and the United States Department of Agriculture and the Nevada Experiment Station.

§ 1905. **Administrative officers—State engineer—His powers and duties.**—The Act of 1907 then proceeds to create the office of State engineer, said engineer to be appointed by the Governor at a salary of $3,600 per year. He shall keep his office at the State Capitol. "No person shall be appointed as State engineer who does not have such training in hydraulic engineering and such practical skill and experience as shall fit him for the position."[1] He must give a bond in the sum of $5000 for the faithful performance of his duties.[2]

The duties of the State engineer are prescribed as follows: He shall become conversant with the State and the needs of the State as to irrigation matters, and in his reports to the Governor he shall make such suggestions as to the amendment of existing laws or the enactment of new laws as his information and experience shall suggest; and he shall keep in his office full and proper records of his work, observations, and calculations, all of which shall be the property of the State. He shall co-operate with the Secretary of the Interior in all work of construction, operation, maintenance, and

2 Laws Nev., 1907, p. 30, Sec. 21; Rev. Laws Nev., 1912, Secs. 4692, 4706.

3 For water commissioners and their duties, see Sec. 1906.

2 Laws Nev., 1907, p. 30, Sec. 9; Rev. Laws Nev., 1912, Sec. 4680.

management of irrigation works under the National Reclamation Act.[3] He may also employ an assistant engineer and office clerks, and he and his assistants are entitled to traveling expenses.[4] He is also given the power, in the first instance, and without the aid of any board of control, to determine existing water rights.[5]

**§ 1906. Administrative officers—Water commissioners.**—Water commissioners may be appointed by the State board of irrigation,[1] whose duty it shall be to measure and divide amongst the appropriators the water of the streams according to the priority of right and the amount to which each is entitled.[2] The number and compensation of the water commissioners must be determined by the board, and said commissioners shall be and act under the direction of the State engineer.[3]

**§ 1907. The appropriation of water—Applications and protests.**—Any one desiring in the future to appropriate any of the public waters or to change the place of diversion or manner of use of water already appropriated shall, performing any work toward such end, make an application to the State engineer for permission to make the same; the statute providing that the prior right to such waters may be "acquired in the manner provided in this Act, and not otherwise."[1]

Said application shall set forth the name and address of the applicant, the source from which such appropriation is proposed to be made, the amount thereof, the location of the proposed works, the purpose for which the appropriation is desired, and if for irrigation a description of the land and the area thereof, and any additional facts required by the State engineer. The application must be on a form furnished by the State engineer, and must be made of record in his office, and must set forth all facts necessary to determine the nature and amount of the proposed appropriation. If the applica-

3 For the National Reclamation Act, see Secs. 1235-1286.

1 Laws Nev., 1907, p. 30, Sec. 7; Rev. Laws, 1912, Sec. 4678.

tion is defective it must be returned for correction, and then take priority as of the date of the original filing.[2] If said application is not corrected and refiled within sixty days no further proceedings shall be had on the same, and it is made the duty of the State engineer to cancel the same.[3]

When any application is filed in compliance with the Act the State engineer shall, within thirty days, at the expense of the applicant, publish the same in some newspaper of general circulation in the county; the said notice to contain the essential facts relating to the proposed appropriation; said publication to continue for a period of at least once a week for four successive weeks. Any one interested may at any time within thirty days after the completion of the publication file with the State engineer a written protest against the granting of said application, stating the reasons therefor, and thereupon the State engineer shall fix a time for the hearing of such application and protest. "Upon such hearing the State engineer may, in his discretion, hear evidence in support of or against such application, and shall take such action thereon as he may deem proper and just; but vested rights to the use of water shall in nowise be lost, prejudiced, or impaired by failure to protest against an application to appropriate under the provisions of this Act."[4]

**§ 1908. The appropriation of water—The permit or refusal thereof.**—If there is no unappropriated water in the source of supply, or such change of place of diversion or manner of use will in any substantial way invade or impair the rights of other appropriators, the State engineer shall refuse such appropriation and make a record of the same, and return the application so endorsed to the appellant, who shall not prosecute the work under his application so long as such refusal shall be in force, under penalty of being deemed guilty of and punished for a misdemeanor. If there is any unappropriated water in the source of supply named, "and the appropriation is not detrimental to the public welfare, or the

proposed change will not injure the rights of others, the State engineer shall approve the application, and set a date prior to which the work of diversion must begin, and a date prior to which it must be completed, make a record of the same in his office, and return the application so endorsed to the applicant, who is then authorized to take such measures as may be necessary to perfect his appropriation or change: Provided, however, the State engineer may approve an application for a less amount of water than that named in the application." Any applicant who shall receive a permit shall file with the State engineer, within thirty days after the time required by such permit for the commencement of the work, an affidavit stating the time when, the place where, and the amount of such work which has been done under said permit. "If such affidavit shall not be so filed the State engineer shall, unless good cause for extension of time within which to file such affidavit be shown, cancel said permit."[1]

The fees which may be charged by the State engineer are specified, certified copies of all records appertaining to an application may be furnished the applicant, and the State engineer is directed to use the seal of his office.[2]

Upon approval of an application in whole or in part the applicant, within six months thereafter, shall furnish the State engineer a map showing the location of the works, the source of appropriation, and if for irrigation the land upon which the water is to be applied.[3]

**§ 1909. The appropriation of water—Independent suits.**—As is the case with the determination of rights,[1] any one feeling himself aggrieved by the decision of the State engineer in refusing his application in whole or in part, or in allowing such application against his protest, may bring an action in any court having jurisdiction against the State engineer to compel him to reverse or modify his decision, and all parties having adverse interests to the party bringing the action shall be joined therein with the State engineer as defendants. Such action must be commenced within sixty days

1 Laws Nev., 1907, p. 30, Sec. 26, as amended by Laws 1909, p. 31, Sec. 6.

2 Laws 1909, p. 31, Secs. 7-9, adding Secs. 26a-26c to the Act of 1907, *supra;* Rev. Laws 1912, Sec. 4697.

3 Laws Nev., 1907, p. 30, Sec. 28; Rev. Laws 1912, Sec. 4702.

1 See Sec. 1912.

after notice in writing of the decision of the State engineer, and shall be begun and prosecuted in all respects like ordinary civil actions in the State, and shall be tried *de novo* by the Court. The right is also given for further appeal from the decision of the Court to any appellate court having jurisdiction.[2]

§ 1910. **The appropriation of water—The certificate.**—Upon satisfactory proof being made to the State engineer that any application to appropriate water has been perfected, the State engineer shall issue to the applicant a certificate setting forth the name of the appropriator, date, source, and proposed amount of appropriation, and if for irrigation a description of the land to be irrigated, which certificate shall, within thirty days after its issuance, be recorded in the county in which the point of diversion is made, as well as in the county where the water is to be used. The priority of such new appropriation shall date from the filing of the application in the State engineer's office.[1]

§ 1911. **The determination of existing rights.**—The determination of existing water rights, in the first instance, is left entirely to the State engineer in decidedly summary proceedings by the following method:

The State engineer is required to prepare for each stream in the State a list of the appropriations of water according to priority, and in order to make such a list he shall enclose to each person having a claim to the waters of any stream the rights to the waters of which he is about to determine, a blank form, on which said claimants shall present in writing all the particulars, showing the amounts and dates of their appropriations; the said statement to include the following: The name and address of the claimant; the nature of the use on which the claim for an appropriation is based; the time of the commencement of such use, and if distributing works are required; the year of beginning of survey; the year of beginning of construction; the year when completed; the year of beginning and completion of enlargements; the dimensions of the ditch as originally constructed and as enlarged; the year when the water was first used for irrigation or other beneficial purposes, and, if for

2 Laws Nev., 1907, p. 30, Sec. 27; Rev. Laws 1912, Sec. 4701.

1 Laws Nev., 1907, p. 30, Sec. 29; Rev. Laws 1912, Sec. 4703.

irrigation, the amount of land reclaimed or irrigated the first year, the amount in subsequent years, with the dates of reclamation, and the amount of land such ditch is capable of irrigating; the character of the soil; and such other facts as will show a compliance with the law in acquiring the appropriation, and the rank of priority claimed. The statement must be sworn to by the claimant. "The failure of any claimant to make such sworn statement within ninety days after notice that such statement is required by the State engineer shall be punishable as a misdemeanor on the complaint of the State engineer or any of his assistants."[1]

It is then made the duty of the State engineer to make a personal examination of such stream and the works diverting therefrom, to include the measurement of flow, unless adequate proof is available from the measurements made by the General Government, also an examination of the irrigated lands and the lands susceptible of irrigation, which observations and measurements shall be reduced to writing and made a matter of record in his office. A plat of the stream showing the location of each ditch and the legal subdivisions of the lands must also be made.[2]

Within thirty days after the preparation of the list of priorities of the appropriation of the use of the waters of any stream it is made the duty of the State engineer to issue to each person, association, or corporation therein a certificate setting forth the name and address of the appropriator, the priority number of such appropriation, the amount of water appropriated, and the amount of prior appropriations, and if such appropriation be for irrigation, a description of the legal subdivisions to which said water is to be applied. And he shall also send such certified list to the county recorder of the county in which such appropriations shall have been made, as well as to the county recorder in which such waters are used, where such lists must be recorded.[3]

**§ 1912. Determination of existing rights—Independent suits.**—There is no appeal allowed by the statute from the decision or

1 Laws Nev., 1907, p. 30, Secs. 14-16; Rev. Laws 1912, Secs. 4685-4687.

2 Laws Nev., 1907, p. 30, Sec. 17; Rev. Laws 1912, Sec. 4688.

3 Laws Nev. 1907, p. 30, Sec. 18; Rev. Laws 1912, Sec. 4689.

See, also, for the State control of waters, Chap. 68, Secs. 1337-1367.

For the adjudication of water rights by boards, see Chap. 79, Secs. 1567-1584.

determination of the State engineer, to either the State board of irrigation or to the courts, as is allowed in Wyoming,[1] but the determination of the State engineer as to existing rights is by no means final, and the saving clause of this seemingly arbitrary method for the determination of such rights is in the right given to claimants to bring an independent action in the courts for the adjudication of such rights, by the following provision:

"Any party, or number of parties acting jointly, who may feel themselves aggrieved by the determination of the State engineer, may bring an action in any court having jurisdiction against such State engineer and all persons having adverse interests to the party or parties bringing the action, to have their respective rights determined. Such action must be brought within one year after the record of such list of priorities of appropriation has been recorded. Such action shall be tried as speedily as possible, and the court is authorized to employ a hydraulic engineer or other expert to examine and make report under oath upon any subject-matter in controversy, the cost of such employment to be equitably apportioned by the Court and charged to the parties to the suit as costs."[2]

§ 1913. **Ditches, canals, and rights of way for the same.**—It was provided that any person or persons desiring to construct and maintain a ditch or flume within any one or more counties of the State shall make, sign, and acknowledge before some officer entitled to take acknowledgments a certificate specifying: First, the name by which the ditch or flume shall be known; and, second, the names and places which shall constitute the termini of said ditch or flume. Such certificate shall be accompanied with the plat of the ditch or flume, and shall be recorded in the office of the county recorder of the county or counties within or through which the said ditch or flume is proposed to be located; and the records of such certificate or plat shall give constructive notice to all persons of the matters therein contained. The work of constructing such ditch or flume shall be commenced within thirty days of the time of making the certificate above mentioned and shall be continued with all reasonable dispatch until completed.

It is further provided that any such person shall have the right

1 See Sec. 2114.

2 Laws Nev., 1907, p. 30, Sec. 19; Rev. Laws 1912, Sec. 4690.

to enter upon private lands for the purpose of examining or surveying the same, and where such lands can not be obtained by the consent of the owner or owners thereof, so much of the same as may be necessary for the construction of said ditch or flume may be appropriated by the said person or persons, after making compensation therefor, as follows: "Said person or persons shall select one appraiser, and said owner or owners shall select one, and the two so selected shall select a third. In case the owner or owners shall from any cause fail for the period of five days to select an appraiser as hereinbefore provided, then it shall be the duty of the appraiser selected by the person or persons proposing to construct said ditch or flume to select a second appraiser, and the two so selected shall select a third; and in either case the three selected shall, within five days after their selection, meet and appraise the lands sought to be appropriated, after having been first duly sworn by some officer entitled to administer oaths, to make a true appraisement thereof, according to the best of their knowledge and ability. If such person or persons shall tender to such owner or owners the appraised value of such land, they shall be entitled to proceed in the construction of the ditch or flume over the lands so appraised, notwithstanding such tender may be refused: *Provided,* that such tender shall always be kept good by such person or persons; *and, provided further,* that an appeal may be taken by either party from the findings of the appraisers to the district court of the district within which the lands so appraised shall be situated, at any time within ten days after such appraisement."

The person or persons constructing or maintaining such ditch or flume are given the right to the undisturbed use of the same. The Act is made to apply to ditches and flumes already constructed and extensions already made.[1]

It is also provided that any person or persons owning or controlling any ditches diverting the waters of any stream in and onto the lands for purposes of irrigation may construct and maintain

1 Rev. Laws Nev., 1912, Secs. 4710-4713.

See, also, Barnes v. Sabron, 10 Neb. 217, 4 Morr. Min. Rep. 673; Hobart v. Ford, 6 Nev. 77; Thorn v. Sweeney, 12 Nev. 251; Robinson v. Imperial S. M. Co., 5 Nev. 44, 10 Morr. Min. Rep. 370.

In regard to proceedings for condemnation of land and rights of way, see Rev. Laws Nev., 1912, Secs. 5606, *et seq.*

waste ditches and flumes, and the right of way for the same is given through the lands of others.[2]

"Any water stored for irrigation or other beneficial purposes may be turned into the channel of any natural stream or water course, and mingled with its waters, and then be reclaimed, but in reclaiming it, water already appropriated by others shall not be diminished in quantity."[3]

**§ 1914. The installation of measuring devices.**—It is made the duty of any parties using any of the public waters under the laws of the State to install and maintain at or near the point of diversion a good, substantial headgate and measuring weir, through which said waters shall flow, and constructed according to the uniform plan and specifications prepared and furnished free of charge by the State engineer; and it is made the duty of the State engineer to so prepare and furnish such plans and specifications. If this is not done by the owner, it may be done by the water commissioner, acting under the instructions of the State engineer. And it is further provided that the owner shall be deemed guilty of a misdemeanor for so failing to construct such devices.[1]

**§ 1915. Protecting highways from damage.**—By the Act of March 19, 1911,[1] all persons conducting water across any highway for any purpose are required to construct and maintain at their own expense good and substantial culverts or bridges over such crossing and shall in no case allow any stream of water, diverted from the natural channel, to flood or wash away any public road or any street or alley in any unincorporated town of the State. For failure to comply with the provisions of the Act, such owner is subject to fine and imprisonment.[2]

**§ 1916. Administrative officers—Bureau of industry, agriculture, and irrigation.**—By the Act approved March 17, 1911,[1] there was created a bureau of Industry, Agriculture, and Irrigation, to be

2 Rev. Laws Nev., 1912, Sec. 4714.

2 See Rev. Laws 1912, Secs. 3045, 3046.
1 Laws Nev., 1911, p. 75, Secs. 1-29; Rev. Laws 1912, Secs. 4486-4494.

composed of the Governor, surveyor general, attorney general, State engineer, and one other member to be appointed by the Governor, the office of which was thereby created, who shall be entitled the Commissioner of Industry, Agriculture, and Irrigation, and of which board the Governor shall be chairman and the said commissioner the secretary. The duties of said board are prescribed, as far as this work is concerned, as follows: First, to be made a bureau of information for outside inquirers, concerning avenues, openings, and opportunities for industrial, agricultural, irrigation, and reclamation enterprises in the State; third, to initiate an exhaustive study of industrial, agricultural, irrigation, and reclamation problems of the State; fourth, to undertake and conduct reasonable and practical explorations and experiments to determine the feasibility of reclaiming favorable portions of the State by utilizing the subsurface waters; fifth, to have control of the selection, management, and disposal of all lands granted the State under the provisions of the Carey Act. For the purpose of carrying out the provisions of the Act, there was appropriated the sum of $25,000.[2]

**§ 1917. Corporations and companies—Water rights.**—By the Act of March 23, 1911,[1] a public service commission was created, to be known as and styled "Public Service Commission of Nevada." The terms "public utility," within the meaning of the Act, shall embrace every corporation, company, individual, association of individuals, and lessees, trustees, or receivers appointed by any court, which may now or hereafter operate and control any plant or equipment, or part of a plant or equipment within the State for the production, delivery, or furnishing for or to other persons, firms, associations, or corporations, among other things, "water for business, manufacturing, agricultural, or household use, or sewerage service, whether within the limits of municipalities, towns, or villages, or elsewhere."

Upon complaint a hearing is provided for. "If, upon such hearing and due investigation, the rates, tolls, charges, schedules, or joint

2 NOTE.—It seems to the author from the above Act that the State of Nevada has just awakened to its possibilities. One of the best advertisements that the State could have had would have been to have passed the law accepting the provisions of the Carey Act about fifteen years earlier.

1 Laws 1911, p. 322; Rev. Laws Nev., 1912, Secs. 4515-4548.

rates shall be found to be unjust, unreasonable, or unjustly discriminatory, or to be preferential or otherwise in violation of any of the provisions of this Act, the commission shall have the power to fix and order substituted therefor such rate or rates, tolls, charges, or schedules as shall be just and reasonable."

§ 1918. **The Carey Act in Nevada.**—The Carey Act, granting to the States containing desert lands such lands upon certain conditions, was approved by the President on August 18, 1894.[1]

By the Act of the legislature of March 20, 1895, the State of Nevada merely "accepted the provisions and conditions of Section 4 of the Act of Congress, . . . approved August 18, 1894, together with all grants of lands to the State of Nevada under the provisions of the said Act," but the State made no provisions for the operation of the Act. Through some local prejudices the State took no steps to provide for its operation, until the Act of the legislature of March 23, 1909; and at that time but a meager and unsatisfactory Act was passed.[2] Then, after seventeen years of accumulated wisdom, the legislators, after seeing the benefits which were being derived from the operation of the Act in other States, saw fit to pass an Act, approved March 17, 1911, for the complete enforcement of the Act.[3]

Under the provisions of the Act of 1911, greater things may be expected of the State of Nevada during the next decade.

Under this Act the State formally accepted the terms of the grant and placed the selection, management, and disposal of said land in the State Commission of Industry, Agriculture, and Irrigation,[4] and the surveyor general was designated as State register of lands.

[1] For the Act and discussion thereunder, see Chap. 67, Secs. 1312-1336.

[2] "The Carey Act in this, as in other States, has been the means of creating a sort of irrigation 'wildcatting,' to borrow a coined word from the mining vocabulary, extravagant claims being made by promoters which are calculated to deceive and invariably do work injury, not only to the investing public, but to legitimate irrigation development." Biennial Report of the State Engineer, 1909-1910, p. 30.

NOTE.—Without the protection of an adequate State law, the above statement may be true; but with such protection, from the experience in other States, just the reverse is the result.

[3] Laws Nev., 1911, p. 84; Rev. Laws 1912, Secs. 3064-3092.

[4] For the Act creating this commission, see Sec. 1916.

The method for the selection of the lands is in the usual form, as discussed in a previous section of this work, and also the method of contracting with the companies constructing the works is similar to that in other States. As a safeguard it is provided that all applications shall be referred to the State engineer, who shall submit a written report thereon, and which shall cover such information regarding the water supply, feasibility of the project, status of the water right, and other data necessary. "No application on which the State engineer has reported adversely shall be approved by the commission."

The price fixed by the Act for the disposal of the lands is not less than 50 cents and not more than $1 per acre. Any citizen of the United States, over the age of 21 years, including married women, may make application to enter such land not to exceed 160 acres for any one person. The application must be accompanied by a certified copy of a contract for a perpetual water right, between the applicant and the company authorized by the commission to furnish water for the reclamation of said lands. Within three years after the water right is available for irrigation, the applicant must make his final proof of reclamation, settlement, and occupation in such form as may be prescribed by the commission and the Department of the Interior. The usual lien is given the constructing company upon the lands and water right for the payment thereof by the applicant.

**§ 1919. Irrigation district law.**—After the California irrigation district law, commonly known as the "Wright Law," was passed in that State, Nevada was one of the first States to enact a similar law. On March 23, 1891, there was approved such an Act.[1] This Act was amended from time to time, and on March 20, 1911, there was approved an entirely new Act governing the subject.[2] This Act contains the usual provisions for the organization of irrigation districts, defining its boundaries, the issuance and sale of bonds, the powers and duties of the board of directors, the levy and collection of assessments, the changing the boundaries of any district, and the other usual provisions that are to be found in other Acts upon this particular branch of the subject, and discussed at length in another

1 See Laws Nev., 1891, p. 106.

2 Laws Nev., 1911, p. 248, Secs. 1-71; Rev. Laws 1912, Secs. 4723-4791.

chapter of this work.[3] All surveys, examinations, maps, plans, and estimates shall be made under the direction of a competent engineer and certified by him. The board must then submit a copy of the same to the State engineer, and within 90 days thereafter, "the State engineer shall file a report upon the same with said board, which report shall contain such matters as, in the judgment of the State engineer, may be desirable."[4] An election may then be called and bonds voted upon. At least as often as once a year after the approval of the plans, the board of directors shall make a report to the State engineer of the progress of the work of construction and reclaiming, and whether or not the plan of irrigation is being successfully carried out, and whether or not the funds available will complete the proposed construction. Upon the receipt of such reports, the engineer shall make such suggestions and recommendations to the board of directors as may be necessary to conserve the best interests of the district. Once a year the board must publish a full, true, and correct statement of the financial standing of the district.[5]

The board of directors of the districts are given the power to acquire, "either by purchase, condemnation, or other legal means, all lands, rights, and other property necessary for the construction, use, and supply, maintenance, repair, and improvement of said canal or canals or works, including canals and works constructed and being constructed by private owners, lands for reservoirs for storage of needful waters, and all necessary appurtenances. In case of purchase, the bonds of the district, hereinafter provided for, may be used to their par value in payment. Said board may appropriate waters in accordance with the law and also construct the necessary dams, reservoirs, and works for the collection of water for said district; and do any and every lawful act necessary to be done that sufficient water may be furnished to each land owner in said district for irrigation purposes. The use of all water required for the irrigation of lands of any district formed under the provisions of this Act, together with rights of way for canals and ditches, sites for reservoirs, and all other property required in fully carrying out the provisions of this Act, is hereby declared to be a public use and

[3] For irrigation districts, see Chap. 70, Secs. 1386-1432.

[4] Laws Nev., 1911, p. 248, Sec. 23.

[5] Laws Nev., 1911, p. 248, Secs. 20, 21; Rev. Laws 1912, Secs. 4742, 4743,

subject to the regulation and control of the State in the manner prescribed by law."

It will be noticed that, by the above provision, the right is given a district to condemn, among other property, existing water rights. This is a change from the original Act, wherein this right was denied.[6]

"None of the provisions of this Act shall be construed as repealing or in anywise modifying the provisions of any other Act relating to the subject of irrigation or water distribution. Nothing herein contained shall be deemed to authorize any person or persons to divert the water of any river, creek, stream, canal, or ditch from its channel to the detriment of any person or persons having any interest in such river, creek, stream, canal, or ditch, or the waters therein, unless previous compensation be ascertained and paid therefor, under the laws of this State authorizing the taking of private property or rights for public uses.

"All irrigation districts heretofore organized under the laws of this State shall hereafter be governed in all respects by the provisions of this Act."[7]

**§ 1920. Provisions in aid of the National Reclamation Act.**—Right of way was granted over all State lands to the United States for works constructed under the National Reclamation Act.[1] Also provisions for the incorporation of water users' associations as required by the Government.[2]

It was also made the duty of the State engineer, by the Act of February 26, 1907,[3] to co-operate with the Secretary of the Interior in all work of construction, operation, maintenance, and management of irrigation works constructed under the Reclamation Act.

**§ 1921. Prohibiting the pollution of waters.**—By the Act approved March 10, 1911,[1] it was provided that any person or company, or any duly elected, appointed, or lawfully created State officer of the State, or of any county, city, town, or municipal gov-

3 Laws Nev., 1907, p. 30, Sec. 10; Rev. Laws 1912, Sec. 4681.

1 Laws Nev., 1911, Chap. 56, Sec. 1.

ernment, who shall deposit in any of the waters of the lakes, rivers, streams, and ditches in the State any sawdust, rubbish, filth, or poisonous, or deleterious substances, liable to affect the health of persons, fish, or live stock, or place or deposit any such substances in any place where the same may be washed or infiltrated into any of the waters named, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than $50 or more than $500: Provided, that in case of public institutions and municipalities, when, owing to the magnitude of the work, immediate correction of the evil is impracticable, then in such cases the authorities shall adopt all new work, and as rapidly as possible reconstruct old systems of drainage sewerage so as to conform with the provisions of the Act; and, provided further, that all such new reconstructed systems shall be completed before March 20, 1917: Provided, that nothing in this Act shall be so construed as to permit mining or milling companies to dump tailings directly into any stream of this State so as to prevent or impede the natural flow of such stream. Nothing in this Act shall be so construed as to apply to any quartz mill or ore reduction works in this State.[2]

§ 1922. **Criminal statutes.**—Any person interfering with, obstructing or resisting the State engineer, assistant engineer, or any water commissioner, in the performance of his duties, as prescribed by the Act, or by any rules or regulations adopted by the board of irrigation, shall be deemed guilty of a misdemeanor, and upon conviction thereof be punishable by a fine not exceeding $500, or by imprisonment in the county jail not more than three months, or by both, in the discretion of the court.[1]

It is also made a misdemeanor for any claimant to fail to make out a statement of his claim, within 90 days after the same is required by the State engineer.[2]

Any person, association, or corporation interfering with or injuring or destroying any works for the diversion, storage, apportionment, measurement, conveyance, or delivery of water, without authority from the owner of the same, or under the authority of the

2 Laws Nev., 1911, Chap. 56, Sec. 1; Rev. Laws 1912, Sec. 6547. See, also, Secs. 2047, 4716, 4718.

1 Laws Nev., 1907, p. 30, Secs. 30, 31; Rev. Laws, 1912, Secs. 4704, 4705.

2 Laws Nev., 1907, p. 30, Sec. 16; Rev. Laws, 1912, Sec. 4687.

State engineer, shall be guilty of a misdemeanor and subject to a fine of not exceeding $100.[3]

The failure to establish measuring devices is a misdemeanor punishable by a fine not exceeding $100, or by imprisonment in the county jail not exceeding 60 days or both.[4]

It is made unlawful to waste water by diverting the same from any natural source and allowing it to run to waste on sagebrush or greasewood land. "Such diversion shall be deemed an unlawful use and waste of the water."[5] The penalty for so wasting the water is fixed at a fine not exceeding $500 or by imprisonment in the county jail for not exceeding six months and by both such fine and imprisonment.

§ 1923. **Riparian rights in State.**—By court decisions the common law of riparian rights is entirely abrogated in the State of Nevada,[1] and the Arid Region Doctrine of appropriation adopted in lieu thereof. The term "Common Law of England" was employed in the statute adopting it, in the sense it is generally understood in this country, that only so much was adopted as was applicable to the condition of the State and the needs of the people therein, and it was further held that the common law doctrine of riparian rights was unsuited to the condition of the State. As was said by the Court in the case of Bliss v. Grayson:[2] "The conditions of this State, the demands and necessities of agriculture, mining, and

[3] Laws Nev., 1909, p. 48, Sec. 1.

[4] Laws Nev., 1909, p. 86, Sec. 3; Rev. Laws, 1912, Sec. 4709.

[5] See Comstock M. & M. Co. v. Allen, 21 Nev. 325, 31 Pac. Rep. 434.

[1] Jones v. Adams, 19 Nev. 78, 6 Pac. Rep. 442, 3 Am. St. Rep. 788; Reno etc. Co. v. Stevenson, 20 Nev. 269, 21 Pac. Rep. 317, 4 L. R. A. 60, 19 Am. St. Rep. 364; Twaddle v. Winters, 29 Nev. 88, 85 Pac. Rep. 280, 89 Pac. Rep. 289; Union M. & M. Co. v. Dangberg, 81 Fed. Rep. 73; Anderson v. Bassman, 140 Fed. Rep. 14; Bliss v. Grayson, 24 Nev. 422, 56 Pac. Rep. 231; Walsh v. Wallace, 26 Nev. 299, 67 Pac. Rep. 914, 99 Am. St. Rep. 692.

In Nevada the doctrine of riparian ownership as a foundation for rights to water has been abandoned. Anderson Land & Stock Co. v. McConnel, 133 Fed. Rep. 581.

But see the early cases of Vansickle v. Haines, 7 Nev. 249, 15 Morr. Min. Rep. 201; Union etc. Co. v. Ferris, 2 Sawy. 176, Fed. Cas. No. 14,371, 8 Morr. Min. Rep. 90; Union etc. Co. v. Dangberg, 2 Sawy. 450, Fed. Cas. No. 14,370, 8 Morr. Min. Rep. 113.

[2] 24 Nev. 422, 56 Pac. Rep. 231.

milling, and the prosperity of its people, have entirely swept away this doctrine of riparian rights as unsuited; and this Court by a line of decisions based upon the requirements of the State, its industries, and necessities, has adopted a rule suited to these conditions and necessities."

§ 1940. Criminal statutes.
§ 1941. Riparian rights in New Mexico.

**§ 1924. Particular features of the State.**—The State of New Mexico can be divided into three great geological divisions. In the eastern portion are the broad plains which are a continuation of Llano Estacado, or Staked Plains of Texas. These plains, extending nearly one-third across the State, gradually rise to form the plateau, which is the base of the Rocky Mountains. On the western side of the mountain ranges is the long narrow valley of the Rio Grande, which traverses the State from north to south, being confined for a great portion of its way by lofty mountain ranges. In the central and southern parts of the State are elevated table lands, arid in the extreme, which are useless even for grazing in their natural condition, although the soil can be rendered extremely productive by the application of water. Taking the State as a whole, the water supply is comparatively well distributed, nearly all of the counties having their small rivers, and some of them large ones. In the eastern portion of the State are the headwaters of the Canadian and Pecos Rivers. The Rio Grande River, rising in Southern Colorado, enters the State from the north through deep canyons. These widen in

places allowing room for bottom lands, and again the walls die down to low mesas. In the southern part of the State, where the principal cities and agricultural communities are found, the proportion of low land increases. Here the river tends to spread out over the bottom lands, losing the greater part of its water by evaporation or seepage through the sandy soil, and in the lower part, above El Paso, the channel in summer is frequently dry. There are many artesian basins scattered throughout the State from which water can be secured.[1]

§ 1925. **Irrigation in the State.**—The Rio Grande Valley has from the earliest times been the home of agriculture and irrigation. The original pre-historic inhabitants, the modern Indians, and subsequently the Spanish invaders, all took water from the river and its tributaries, not only in very much the same manner as now prevails, but even to some extent in the same ditches. Every town or group of farmers has its own ditch. Owing to lack of system, there has heretofore been a great loss of water, which might often have been avoided by the construction of a single well-built canal, in lieu of many poorly constructed ditches.

Many of the farmers in the State are of mixed Spanish and Indian descent, and have followed traditional customs, and show little energy or skill. The small ditches are constructed by communities and are called community ditches. Under the community system each ditch is held and controlled by the owners of the land it irrigates, these living usually together in a village or pueblo. In the fall of each year a *majordomo* is elected, who has full control of the ditch for the following season. He assesses the land for the labor necessary to clean the ditch and keep it in repair during the irrigation season, apportions the water to each consumer, and, in general, supervises all matters pertaining to irrigation. The ditches have

[1] See Preliminary Report on the Geology and Underground Waters of the Roswell Artesian Area, New Mexico, by Cassius A. Fisher, 1906, Water-Supply and Irrigation Paper No. 158; Surface Water Supply of the Western Gulf of Mexico and Rio Grande Drainages, by T. U. Taylor and W. A. Lamb, district hydrographers, 1907, Water-Supply and Irrigation Paper No. 210, U. S. Geological Survey; Geology and Water Resources of the Stancia Valley, New Mexico, with Notes on Ground-Water Conditions in Adjacent Parts of Central New Mexico, by Oscar E. Meinzer, 1911, Water-Supply Paper No. 275, U. S. Geological Survey.

no regulating gates or sluices and flooding is the only method of irrigation; consequently the use of the water is extremely wasteful.

As is the case of Arizona it may also be said that in New Mexico nearly all the water that can be taken out upon the arable land by the efforts of individuals or by farmers acting in partnership has now been appropriated, and further agricultural growth can only be developed by the conservation of the flood waters which require the construction of large and expensive works.

New Mexico was late in adopting the provisions of the Carey Act, and also the irrigation district law, which have been operated so successfully in other States.

The National Reclamation Service has constructed several projects within the State, notably the Carlsbad project, the Hondo project, and the New Mexico, Texas, Rio Grande project.[1]

According to the Census Report for 1910, the total number of farms irrigated in 1909, was 11,399, as against 7,884 in 1899, an increase of 3,515, or 44.5 per cent.

The total acreage irrigated in 1909 was 461,718 acres, as against 203,893 acres in 1899, an increase of 257,825, or 126.5 per cent.

The total acreage which all enterprises were capable of supplying with water in 1909 was 644,970 acres. The acreage included in enterprises completed or under construction in 1910, was 1,102,251 acres.

The acreage actually irrigated in 1909, classified by type of enterprise, was as follows: Under United States Reclamation Service 13,398 acres, under United States Indian Service 24,007 acres, under co-operative enterprises 264,411 acres, under commercial enterprises 15,690 acres, and under individual and partnership enterprises 144,212 acres.

Dept. of Agriculture, Office of Experiment Stations, Bulletin No. 119; Irrigation Investigations in New Mexico, Experiment Station, Mesilla Park, by J. J. Vernon, professor of agriculture, New Mexico Agricultural College, 1905, Separate No. 5, Annual Report of Irrigation and Drainage Investigations, 1904, Reprint from Office Experiment Stations, Bulletin No. 158; The Use of Water in Irrigation in the Pecos Valley, Reprint from U. S. Dept. of Agriculture, Office of Experiment Stations, Bulletin No. 86.

See, also, the most excellent report of the territorial engineer for 1908-1910, by Vernon L. Sullivan, territorial engineer.

§ 1926. **Criticism of the New Mexico laws.**—Originally many of the laws governing the subject of waters in New Mexico were based upon the Spanish and Mexican laws upon the subject.[1] But by the adoption of the Water Code, in 1907, many of these laws, especially as to future operations, were abrogated. The Water Code referred to is based largely upon State control of the waters within the boundaries of the State. This code became a part of the State laws when New Mexico was admitted to the Union. The code is modern and up to date and embodies many of the best features of water codes of the other States. Future appropriations of water must be made by application to the State engineer, and the adjudication of existing rights, in the first instance, was properly left to the courts.

The Act upon the subject of artesian wells and their regulation is, in a way, unique, but it seems to govern the subject completely and seems to give complete satisfaction.[2] New Mexico is one of the States which is given the benefits of the Carey Act. The usual provisions for its acceptance and operation have been made.[3] A number of provisions have also been enacted in aid of the National Reclamation Act.[4] The irrigation district law was not enacted until 1909, and the results of its operations have not yet been fully ascertained.[5]

§ 1927. **Constitutional provisions.**—New Mexico has recently become a State; its constitutional convention has been held and adopted by the people, and the following provisions relative to waters adopted in the constitution:

Article XVI provides:

"Section 1. All existing rights to the use of any waters in the State for any useful or beneficial purposes are hereby recognized and confirmed.

"Sec. 2. The unappropriated waters of every natural stream, perennial or torrential, within the State of New Mexico, is hereby declared to belong to the public and to be subject to appropriation

1 For a discussion of the Spanish and Mexican laws, see Secs. 570-584.

2 For artesian wells, see Secs. 1166-1184.

3 See Sec. 1939.

4 See Sec. 1936.

5 Laws, 1909, Chap. 109, p. 295; see, also, Laws, 1909, Chap. 140, p. 383.

See, also, Sec. 1938.

for beneficial use. In accordance with the law of the State, priority of appropriation shall give the better right.

"Sec. 3. Beneficial use shall be the basis, the measure, and the limit of the right to the use of water.

"Sec. 4. The legislature is authorized to provide by law for the organization and operation of drainage districts and systems."

Article XXI, Section 7, provides:

"Sec. 7. There are hereby reserved to the United States, with full acquiescence of the people of this State, all rights and powers for the carrying out of the provisions by the United States of the Act of Congress, entitled 'An Act appropriating the receipts from the sale and disposal of public lands in certain States and Territories to the construction of irrigation works for the reclamation of arid lands,' approved June 17, 1902, and Acts amendatory thereof or supplementary thereto, to the same extent as if this State had remained a Territory."

Article II, Sections 18 and 20, also provide:

"Sec. 18. No person shall be deprived of life, liberty, or property without due process of law; nor shall any person be denied the equal protection of the laws.

"Sec. 20. Private property shall not be taken or damaged for public use without just compensation."

Article XXII, Section 4, provides:

"Sec. 4. All laws of the Territory of New Mexico in force at the time of its admission into the Union as a State, not inconsistent with this constitution, shall be and remain in force as the laws of the State until they expire by their own limitation, or are altered or repealed; and all rights, actions, claims, contracts, liabilities, and obligations shall continue and remain unaffected by the change in the form of government."

Section 5 of the Organic Act of the Territory of New Mexico also grants to the Territorial legislature the power to enact incorporation laws, providing for the incorporation of companies to construct and operate irrigation works.[1]

By Section 10 of the Enabling Act, there was reserved to the United States, and exempted from operation from any and all grants made or confirmed by the Act to the proposed State, all land

1 Gutierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357.

actually or prospectively valuable for the development of water power and hydro-electric use or transmission, which shall be ascertained and designated by the Secretary of the Interior within five years after the proclamation of the President declaring the admission of the State.[2]

**§ 1928. Title to water — Right of appropriation — Abandonment.**—By the Water Code Act, approved March 19, 1907,[1] upon the subject of waters within the State, and of the right of appropriation, it is declared:

"All natural waters flowing in streams and water courses, whether such be perennial or torrential, within the limits of the State of New Mexico, belong to the public and are subject to appropriation for beneficial use.[2]

"Beneficial use shall be the basis, the measure, and the limit of the right to the use of water,[3] and all waters appropriated for irrigation purposes, except as otherwise provided by written contract between the owner of the land and the owner of any ditch, reservoir, or other works for the storage or conveyance of water, shall be appurtenant to specified lands owned by the person, firm, or corporation having the right to use the water, so long as water can be beneficially used thereon, or until the severance of such right from the land, in the manner hereinafter provided. Priority in time shall give the better right.[4] In all cases of claims to the use of water initiated prior to the passage of this Act, the right shall relate back to the initiation of the claim, upon the diligent prosecution to completion of the necessary surveys, and construction for the application of the water to a beneficial use. All claims to the use of water

2 This was also the case with Arizona. See Sec. 1713.

1 Laws New Mexico, 1907, p. 73.

2 It will be noticed that in all quotations from the Act we have changed the words "Territory" and "Territorial" to that of "State."

See Jaquez Ditch Co. v. Garcia, — N. M. ——, 124 Pac. Rep. 891, where it was held that where surface water in a hilly region seeks an outlet through a gorge or ravine during the rainy season, and by its flow assumes a definite and natural channel, and such has always been the case, as the memory of man runs, such accustomed channel through which the water flows possesses the attributes of a natural water course, the water of which may be appropriated.

3 Millheiser v. Long, 10 N. M. 99, 61 Pac. Rep. 111; Hagerman v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

4 Vanderwork v. Hewes, 15 N. M. 439, 110 Pac. Rep. 567, 1 Water & Min. Cas. Ann. 351.

initiated after the passage of this Act shall relate back to the date of the receipt of an application therefor in the office of the State engineer, subject to the compliance with the provisions of this Act and the rules and regulations established thereunder."[5]

When the party entitled to the use of water fails to beneficially use all or any part claimed by him, for which a right of use has vested, for the purpose for which it was appropriated or adjudicated, except water for storage reservoirs, for a period of four years, such unused water shall revert to the public and be regarded as unappropriated public water.[6]

§ 1929. **The appropriation of water.**—Upon the subject of the appropriation of water within the State, the Wyoming law is largely followed. Any person, association, or corporation intending to acquire a right to the beneficial use of water, shall, before commencing construction for such purposes, make an application to the State engineer for a permit to appropriate, in the form required by the regulations established by him.[1]

Complete maps, field notes, plans, and specifications must be furnished by the applicant, and, if not sufficient in the first instance, must be corrected. A notice of the proposed appropriation must be published, giving all the essential facts of the same. If the applicant complies with the law and the regulations and the project is feasible, the State engineer may endorse his approval on the application, which shall thereupon become a permit to appropriate water, and shall state in such approval the time within which the works must be completed, not exceeding five years from the date of approval, and the time within which the water shall be applied for a beneficial purpose, not exceeding four years in addition thereto: Provided, that the engineer may, in his discretion, approve any application for a less amount of water, or may vary the periods of

[5] Laws N. M., 1907, p. 73, Secs. 1, 2.

[6] Laws, 1907, p. 86, Sec. 42; Hagerman v. McMurry, 16 N. M. 172, 113 Pac. Rep. 823.

[1] Laws, 1907, p. 80, Sec. 24.

For appropriation under the laws of Wyoming, see Secs. 2106-2109.

By the Act approved March 17, 1909, it was provided that the water code of 1907 "shall not be construed to apply to stockmen or stock owners who may build or construct water tanks or wells for watering stock." See Laws, 1909, p. 149.

annual use. "If, in the opinion of the State engineer, there is no unappropriated water available, he shall reject such application."[2]

The construction of the work must be diligently prosecuted, and if one-fifth of the work shall not be completed within one-half the time allowed, as determined by the State engineer, he may accept and approve an application for the use of all or any of the waters included in the permit issued to the prior applicant, and the right to use such waters shall thereupon be forfeited: Provided, that the State engineer shall allow an extension of time on request of the prior applicant equal to the time during which work was prevented by the operation of law or other causes, beyond the power of the applicant to control.

And by the Act approved March 18, 1909,[3] any person or company claiming rights or priorities, and whose work in perfecting such rights was in progress, prior to the adoption of the Water Code of March 18, 1907, and who had expended more than $40,000 in necessary surveys and construction, shall have a reasonable time as determined by the State engineer within which to complete such works.

On the date set for the completion of the work, or prior thereto, upon notice from the owner, the State engineer shall cause the work to be inspected. If not properly and safely constructed the engineer may require the necessary changes to be made. Failure to make such changes shall cause the postponement of the priority under the permit for such time as may elapse from the date for completing such changes until made to the satisfaction of the State engineer, and applications subsequent in time shall have the benefit of such postponement. When the works are found satisfactory, after inspection, the State engineer shall issue his certificate of construction, setting forth the actual capacity of the works and such limitations on the water right as shall be warranted by the condition of the works, but in no manner extending the rights described in the permit.[4]

On or before the date set for the application of the water to a beneficial use the State engineer shall again cause the works to be inspected, and upon the completion of which he shall issue a license to appropriate water to the extent and under the condition of the

[2] Laws, 1907, p. 80, Secs. 24-28.
[3] Laws, 1909, p. 373.
[4] Laws, 1907, p. 83, Secs. 30-33.

actual application thereof to a beneficial use, but in no manner extending the rights described in the permit. Any permit or license may be assigned, but in order to be binding such assignment must be filed with the State engineer. Any question involving the validity of rights so acquired may be taken in the court.[5]

In case of seepage water from any constructed works, the owner of such works shall have the first right to the use thereof upon filing an application to the State engineer, but if such application is not filed within one year after the completion of such works, any party desiring to use the same may make application.[6]

§ 1930. **Administrative officers.**—Under the Water Code of New Mexico of 1907, the following administrative officers and their powers and duties were provided for:

*Board of Water Commissioners.*—A board of water commissioners is created, consisting of three members, to be appointed by the Governor, by and with the advice and consent of the legislative senate, from different sections of the State, and to hold office for a term of four years: "It shall be the duty of said board to hear and determine appeals from the actions and decisions of the State engineer in all matters affecting the rights, priorities, and interests of water users and owners of, or parties desiring to construct canals, reservoirs, or other works for the conveyance, storage, or appropriation of waters in this State."[1] The said board may adopt and use a seal and make rules for the hearing and the determination of appeals not inconsistent with the law. Any member of said board or the clerk thereof is empowered to take testimony and to administer oaths; and the board is also given the power to summon witnesses. Each member of the board shall receive $5 per day while in attendance at meetings thereof; provided, that no member shall receive pay for more than sixty days' service in any one year. The board shall also appoint a clerk.[2]

5 Laws, 1907, p. 84, Secs. 34-38.

6 Laws, 1907, p. 89, Sec. 53.

For appropriation of water under the old laws of New Mexico, see De Baca v. Pueblo of Santo Domingo, 10 N. M. 38, 60 Pac. Rep. 73; Gutierres v. Albuquerque etc. Co., 188 U. S. 545, 47 L. Ed. 588, 23 Sup. Ct. Rep. 338; affirming *Id.*, 10 N. M. 177, 61 Pac. Rep. 357; United States v. Rio Grande etc. Co., 174 U. S. 690, 43 L. Ed. 1136, 19 Sup. Ct. Rep. 770; *Id.*, 9 N. M. 303, 51 Pac. Rep. 674; Trambley v. Luterman, 6 N. M. 15, 27 Pac. Rep. 312.

1 Laws, 1907, p. 92, Sec. 63.

2 Laws, 1907, p. 93, Secs. 67-69.

Appeals may be had from all decisions of the board to the District Court of the proper district. If no such appeal is taken, the decision of the board upon any question is final.[3]

*State Engineer.*—A State engineer is provided for, who shall be a technically qualified and experienced hydraulic engineer, to be appointed by the Governor and confirmed by the legislative council. He shall hold office for four years and draw a salary of $2000 per annum. "He shall have the general supervision of the waters of the State, and of the measurement, appropriation, and distribution thereof." His office shall be at the seat of government. He may employ assistants. He must give a bond in the sum of $10,000. He shall prepare and deliver to the Governor a biennial report. A schedule of fees to be charged by his office is provided. All records in his office are public. He shall, subject to the approval of the board of water commissioners, make all necessary rules and regulations to carry into effect the duties devolved upon his office. "He shall have the supervision of the apportionment of water in this State according to the licenses issued by him and his predecessors, and the adjudication of the courts." He shall from time to time, as may be necessary for the economical and satisfactory apportionment of water, divide the State into water districts.[4] An appeal is allowed from all decisions of the State engineer to the board of water commissioners.

It is also made his duty, whenever requested by any boards of commissioners of any counties, to co-operate with said commissioners in the engineering work required to establish and construct any drain.[5]

*Water Masters.*—Over the water districts, as designated by the State engineer, upon written application of a majority of the water users therein, the State engineer must appoint a water master. The water master has the immediate charge of the apportionment of the waters of his district under the general supervision of the State engineer, "and he shall also appropriate, regulate, and control the waters of the district as will prevent waste." He is allowed $4 per day for the actual time spent in the performance of his duties, and

[3] For procedure on appeal from decision of board, see Laws, 1907, p. 92, Secs. 63-66.

[4] Laws, 1907, p. 74, Secs. 4-13.

[5] Laws, 1907, p. 78, Sec. 18; as amended, Laws, 1909, p. 372.

For jurisdiction of State engineer, see Young v. Hinderlider, 15 N. M. 666, 110 Pac. Rep. 1045, 1 Water & Min. Cas. Ann. 338; Vanderwork v. Hewes, 15 N. M. 439, 110 Pac. Rep. 567, 1 Water & Min. Cas. Ann. 351.

each water master shall report to the State engineer. An appeal is allowed from all decisions of a water master to the State engineer.[6]

**§ 1931. Ditches, canals, and other works—Rights of way.**—If the State engineer shall in the course of his duties find that any works used for the storage, diversion, or carriage of water are unsafe and a menace to life or property, he shall at once notify the owner or agent, specifying the changes necessary and allowing a reasonable time for putting the works in a safe condition. An inspection of any works may be requested by other parties. The use of such works contrary to the instructions of the engineer is made a misdemeanor.[1] Bridges must be constructed on highways.[2] So, also, headgates and measuring devices at the expense of the owner, under the direction of the State engineer.[3]

The right of condemnation is granted to acquire rights of way over private lands for all such works, including reservoirs for the storage of water.[4] Such land to be acquired in the manner provided by law for the condemnation and taking of private property for public uses.

The right to the use of natural streams is granted for the purpose of conducting water, and the right to recapture the water, less proper deduction for evaporation and seepage, to be determined by the State engineer.[5]

The right to enlarge and use the canals and other works of others is permitted.[6]

Rights of way are also granted over all State lands upon application to the State engineer.[7]

**§ 1932. The standard of measurement—Distribution of water.**—"The standard of measurement of the flow of water shall be the cubic foot per second of time; the standard of measurement of the volume of water shall be the acre-foot, being the amount of water upon an acre covered one foot deep, equivalent to 43,560 cubic feet. The miner's inch shall be regarded as one-fiftieth of a cubic foot

[6] Laws, 1907, p. 77, Secs. 13-17.
[1] Laws, 1907, p. 83, Secs. 32, 33.
[2] Laws, 1907, p. 88, Sec. 49.
[3] Laws, 1907, p. 87, Sec. 46.
[4] Laws, 1907, p. 74, Sec. 3.
[5] Laws, 1907, p. 91, Sec. 60.
[6] Laws, 1907, p. 91, Sec. 61.
[7] Laws, 1907, p. 94, Sec. 70.

For ditches and canals on public lands, see United States v. Lee, 15 N. M. 382, 110 Pac. Rep. 601, 1 Water & Min. Cas. Ann. 479.

per second in all cases except when some other equivalent of the cubic foot per second has been specifically stated by contract, or has been established by actual measurement or use." [1]

"In the issuance of permits to appropriate water for irrigation or in the adjudication of rights to the use of water for such purpose, the amount allowed shall not be in excess of the rate of one cubic foot of water per second for each seventy acres, or the equivalent thereof, delivered on the land." [2]

The distribution of the water in the State comes under the direction of the State engineer, and under him the water masters. In all cases where local or community customs, rules, and regulations have been adopted and are in force by a majority of the water users under any irrigation system, and have for their object the economical use of water and are not detrimental to public welfare, such rules and regulations shall govern, subject to the authority of the State engineer.[3]

The owner or owners of any works for the storage, diversion, or carriage of water which contain water in excess of their needs for irrigation or other beneficial use for which it has been appropriated, shall be required to deliver such surplus at uniform rates to parties entitled to use the same under like conditions and circumstances.[4]

All water for irrigation shall be considered appurtenant to the land upon which it is used, and the right to the use of the same upon said land shall never be severed from the land without the consent of the owner thereof; but by and with his consent it may be transferred for other purposes without losing priority upon the approval of an application of the owner to the State engineer.[5]

**§ 1933. The adjudication of existing rights.**—The adjudication of existing water rights under any stream system in the State of New Mexico starts out with the hydrographic surveys and stream measurements by the State engineer. Upon the completion of such surveys the Attorney-General of the State must enter suit on behalf of the State for the determination of all existing rights under such system, in order that the amount of unappropriated water subject to disposition may become known. If the suit has been begun by

1 Laws, 1907, p. 86, Sec. 41.
2 Laws, 1907, p. 85, Sec. 43.
3 Laws, 1907, p. 90, Sec. 57.
4 Laws, 1907, p. 85, Sec. 39.
5 Laws, 1907, p. 86, Secs. 44, 45.

private parties the Attorney-General shall intervene on behalf of the State, in which case he is not required to bring an action. The entire adjudication of water rights is left to the Court, which is given exclusive jurisdiction to hear and determine all questions necessary for the adjudication of all water rights within the stream system involved. The Court may submit any question of fact arising therein to a jury or to one or more referees, at its discretion. Upon the final adjudication of the rights a certified copy of the decree shall be prepared and filed in the office of the State engineer at the cost of the parties. Such decree shall in every case declare as to the water right adjudged to each party, the priority, amount, purpose, periods, and place of use, and as to water used for irrigation, except as otherwise provided in the Act, the specific tracts of land to which it shall be appurtenant, together with such other conditions as may be necessary to define the right and its priority.[1]

All rights vested prior to the enactment of the Water Code are protected; however, they are subject to regulation, adjudication, and forfeiture for abandonment, as provided by the code.[2]

All decrees granting, defining, or limiting water rights must be recorded in the office of the probate clerk and *ex officio* recorder of the proper county.

§ 1934. **Reservoir rights.**—By the Act approved March 18, 1909,[1] the right to construct reservoirs was granted, subject, however, to the provisions of the Water Code of 1907. In cases of applications for permits to impound and utilize waters of any stream or flood waters under conditions which would cause or permit a considerable return flow of such waters into their natural channels above the diversion or storage works of other appropriators or of others using or who have acquired rights to the use of water from said stream or stream system, the State engineer is authorized to approve such applications whenever such storage or use would not result in depriving such lower users or appropriators of water to the extent of their reasonable requirements. By this means vested rights must not be impaired. The owners of works proposing to store water may make the usual application to the State engineer, "and shall be held as trustees of such right for the parties applying

1 Laws, 1907, p. 79, Secs. 19-23.
2 Laws, 1907, p. 90, Sec. 59.

1 Laws, 1909, p. 371.

the water to a beneficial use, and shall be required to sell water rights for a reasonable price and to furnish the water for such parties at reasonable rates for storage, or carriage, or both, as the case may be."[2]

§ 1935. **Artesian wells and their regulation.**—By the Act approved March 17, 1909,[1] outside of those of South Dakota and Kansas, New Mexico enacted probably the most elaborate law upon the subject of artesian wells and their regulation, and of the waters therefrom of any of the States.[2]

For the purpose of the Act an artesian well is defined to be "an artificial well which is sunk to the artesian stratum or basin, and from which water is raised to or above the surface by natural pressure, or from which water is raised to or above the surface of the earth by artificial means."

The operation under the Act is by counties, and to provide for the carrying out of the terms of its provisions the board of county commissioners of each county is required to issue a call to the owners of artesian wells for a convention for the purpose of electing three members of the "county artesian well board," each well within the county being entitled to one vote in all proceedings in such convention. And the county artesian well board at its first meeting shall appoint a county artesian well supervisor, who shall continue in office at the pleasure of such commissioners. Such supervisor shall be qualified by education and experience in artesian well matters. The compensation of the members of such board shall not exceed $5 per day; that of the supervisor to be fixed by the board, but not to exceed $2000 per annum.

It is made the duty of each artesian well supervisor to inspect such artesian wells in such counties at least once in three months, and to inspect each well put down to the artesian basin, but outside the district of flowing wells, at least once in six months, and to keep a record of such inspection in his office, which records shall be at all times open to the inspection of any person. It is made his further duty to see that all provisions of the Act are carried out,

2 Laws, 1907, p. 80, Sec. 24.

1 Laws, 1909, p. 177.

2 For artesian wells, see Secs. 1166-1184.

For the artesian law of South Dakota, see Sec. 2035.

For artesian law of Kansas, see Sec. 1859.

and to make complaint against any violation of the same. He must give a bond in the sum of $5000 for the faithful performance of the carrying out of the duties of his office. It is also made the duty of the supervisor to inspect all reservoirs which receive their supply from artesian wells, and to order the repair of the same if defective. Wells and reservoirs may also be repaired by the supervisor whenever necessary to stop waste, plugging the well if necessary. All expenses for the same to become a lien upon the land, which lien may be foreclosed the same as mortgages.

It is made the duty of the county artesian well board to act as a board of arbitration and to decide all disputes that may arise between the supervisor and the owner or occupant of the land, or the person drilling or repairing a well with whom such dispute has arisen. Such dispute coming to the board by way of an appeal from the supervisor, "unanimous decision of the county artesian well board upon matters before said board on appeal shall be deemed final, and if the parties to the dispute shall each state his contentions in writing, and shall in writing agree to submit such disputed questions to the county artesian well board, the unanimous decision of such board upon such question shall be final, and have the force and effect of a judgment of Court upon the parties thereto."

For the purpose of creating a fund for the payment of the salary of the supervisors and their expenses, a license tax is imposed of $5 per annum on each well, to be collected by the county treasurer of the county in the same manner as county taxes. And it is made the duty of the supervisor to report to the treasurer monthly as wells are completed.

All persons, prior to the commencement of the construction or repair of any artesian wells, or any other wells entering the artesian basin, must make a written application to the well supervisor in the county. And no permit shall be issued by such supervisor unless the work proposed and the materials proposed to be used shall conform in all respects to the provisions of the Act. "All wells of every description and for every purpose that shall be put down to the artesian basin shall be cased with standard pipe or drive pipe of the following weights and dimensions: Six-inch pipe to be of not less than 18 pounds to the foot; eight-inch pipe to be of not less than 28 pounds to the foot; ten-inch pipe, when used for main casing, to be not less than 40 pounds to the foot." All wells must be

constructed so as to confine and so as to conduct to the surface any and all flows encountered. Contractors engaged in the drilling of artesian wells must give a bond conditioned for the faithful construction of each well, and when such well is completed it shall conform to and comply with the provisions of the Act. A complete record of each well must also be kept by such contractor.

Upon the subject of the appropriation of water from such wells it is provided that all persons or corporations now owning, controlling, or using such artesian wells shall file a sworn statement in the office of the probate clerk in the county setting forth the date when such well is commenced, the date when completed, and the amount of water flowing therefrom. The maximum amount of water that may be used on each acre of land under cultivation must not exceed three acre-feet during the year, to be measured and allotted by the supervisor. "It is further provided that water shall not be used from an artesian well for irrigating purposes, either day or night, unless the person using the water or some one for him shall personally and at all times attend to the application of the same to the land." It is also made unlawful for any owner or person using water from artesian wells to conduct the water from such well to a distance greater than one and one-half miles from such well when such water is conducted through any earth ditch, or two and one-half miles when such water is conducted through any concrete ditch. All owners of a well must provide suitable appliances to enable the well supervisor to readily take the pressure reading of such well.

The wasting of water of artesian wells is declared to be a public nuisance, and the person who suffers the same is deemed guilty of a misdemeanor. The watering of stock must be conducted without wasting the water. Any person violating any of the provisions of the Act shall, upon conviction, be fined upon each offense not less than $5 nor more than $100, and costs of prosecution. Each day in which any of the provisions of the Act shall be violated shall be considered a separate offense. It is made the duty of the county commissioners, road supervisors, city engineers, city and town officers, upon complaint of any citizen within their respective counties, cities, or towns, to institute criminal action for the violation of the Act.

**§ 1936. Provisions in aid of the National Reclamation Act.**—The right of eminent domain is granted the United States for the acquisition of the necessary rights of way for the construction of all works under the provisions of the National Reclamation Act.[1] Also a right of way is granted over all State lands.[2] No works constructed by the United States are subject to inspection by the State engineer.[3]

The right of the United States to appropriate waters is granted, and such waters shall not be subject to further appropriation for a period of three years from the date of the notice of the proper official; but in case of failure to file plans of the proposed work within three years, the water specified in the notice shall become public waters, and subject to general appropriation. All evidence of the right of the United States must be filed in the office of the State engineer, upon assignment.[4] The sale of all State lands under National reclamation projects must conform to the farm units in conformity with the classification by the United States.[5]

By the Act approved March 17, 1909,[6] provisions were made for the organization of water users' associations, which associations may act in conjunction with a National reclamation project or independently, depending upon the provisions of its articles.[7]

**§ 1937. Corporations and companies — Water users' associations.**—By the Act approved March 17, 1909,[1] a general law for the incorporation of water users' associations was provided. The Act provides that whenever the owners of lands, reservoirs, or irrigation ditches in any county or adjoining counties in the State may desire to enter into a mutual undertaking to construct, maintain, and operate storage reservoirs, diverting dams, irrigation ditches, canals, or other irrigation works, or to combine their several works or systems, or to improve, enlarge, or add to the same, for their mutual advantage, they may organize a water users' association under the provisions of the Act. It must be noted that corporations organized under this Act may or may not be organized for operation in con-

1 Laws, 1907, p. 74, Sec. 3.
2 Laws, 1907, p. 89, Sec. 54.

7 For water users' associations, see Secs. 1281-1286.
1 Laws, 1909, p. 210.

nection with the National Reclamation Service.[2] It depends entirely on what may be contained in the articles of association. Parties desiring to organize such an association must execute a certificate setting forth: (1) The name of the association; (2) the names of the incorporators; (3) the location of its principal office in the State; (4) the objects and purposes of the association, the county or counties in which its operations are to be carried on, and the general description of the lands to be irrigated, and the reservoirs or other works to be constructed, enlarged, combined, or used under the management of the association; (5) the amount of capital stock and number and denomination of the shares, or, if the incorporators do not desire to issue shares, the plan and manner of acquiring membership and of providing funds or means for the acquisition, construction, improvement, and maintenance of its works and for its necessary expenses; (6) the period, if any, limited for the duration of the association; (7) the number and manner of electing the board of directors, trustees, or governing board of said association, and may name the persons who shall serve as such for the first three months; (8) the certificate, or any amendment thereof, made as in the Act provided may also contain any provision not inconsistent with the Act or other law of the State which the incorporators may choose to insert for the regulation and conduct of the business and affairs of the association, extending its membership, enlarging or changing the scope of its operations, creating and enforcing a lien upon the lands, reservoirs, or other works, and water rights of the association or its members for the acquisition, construction, repair, improvement, and maintenance of reservoirs or other works, collecting the necessary funds for expenses and purposes of the association, defining or limiting its powers, and for its dissolution and the distribution or other disposition of its property.

The certificate must be acknowledged as required for deeds of real estate, and shall be filed in the office of the Secretary of State, and a copy thereof duly certified by said secretary shall be recorded in the office of the recorder where the lands or works are located, and such certificate shall "be evidence in all courts and places." Upon the filing of such certificate as aforesaid, such persons constitute a body corporate, and are empowered to do any act or thing necessary

2 For water users' associations in connection with the National Reclamation Act, see Secs. 1281-1286.

or proper for carrying out the purposes of their organization. Provisions are made for making amendments, changes, or alterations as may be desired. The power is given its shareholders or members to make or alter by-laws or rules and regulations for the management and operation of the works, the distribution of the waters thereof, and the control and conduct of its business and affairs. Such associations shall have the right of way over all lands owned by the State, and the right of condemnation for the same as provided by the Water Code of 1907.[3]

§ 1938. **Irrigation district law.**—By the Act of 1909 [1] the legislature of the then Territory of New Mexico adopted the irrigation district law, based mainly upon the provisions of the California law, with some of the important amendments.

The Act provides that upon a petition of a majority of the resident freeholders owning more than one-half of the lands included within the proposed district to the county commissioners that said commissioners must take up the matter, and upon publication of the petition determine at a hearing set for that purpose whether such a district should be established or not. If the county commissioners decide that it should be, they must make a call for an election of the qualified electors of the district. At such election, if two-thirds of the legal electors vote in the affirmative, the county commissioners shall declare said district duly organized.

The remainder of the Act is very similar to the California Act.[2]

§ 1939. **The Carey Act in New Mexico.**—By the Act approved March 18, 1909,[1] the then Territory of New Mexico accepted the provisions of the Carey Act, and also provided for its operation. The selection, management, and disposal of the land is vested in the Carey Act land board, which board consists of the governor, commissioner of public lands and the State engineer. The usual powers and duties of said board are provided for. No application shall be granted on which the State engineer has reported adversely, either

For the irrigation district laws, see Chap. 70, Secs. 1386-1432.

[1] Laws, 1909, p. 260.

as to the water supply or feasibility of the undertaking. Upon the withdrawal of the land by the Interior Department the contract between the State and the constructing company may be entered into. Upon the completion of the works and the opening of the land for settlement any citizen of the United States, or any person having declared his intention, over the age of 21 years, may make application for not to exceed 160 acres of land. Such application must be accompanied with the usual water right contract with the construction company and 25 cents per acre. The full price fixed for the land is 50 cents per acre. Final proof of reclamation, settlement, and occupation must be made by the settler. The usual forfeiture for non-compliance with the law and for the non-payment upon the water contract is provided, and the usual lien given to the constructing company.

§ 1940. **Criminal statutes.**—It is made misdemeanors to use works declared to be unsafe by the State engineer;[1] to destroy any headgate or measuring device;[2] to use the water of another person without his consent; to carry on the construction of any works without the permit of the State engineer, except in the case of the United States;[3] for any person to fail to appear and testify at the order of the board or referee.[4]

It is also made unlawful for any person, company, or corporation to divert the waters of any public stream in New Mexico for use for reservoirs or other purposes in a valley other than that of any such stream, to the impairment of valid and subsisting prior appropriations, and punishable by a fine of not less than $100 nor more than $500, or imprisonment in the county jail for not less than one month nor more than three months, or both.[5]

Any violation of the provisions of the Artesian Well Act of 1909 is also made a misdemeanor.[6]

§ 1941. **Riparian rights in New Mexico.**—The law of riparian rights in the State of New Mexico may be regarded as entirely abro-

# CHAPTER 95.

## NORTH DAKOTA.

§ 1942. Particular features of the State.
§ 1943. Irrigation in the State.
§ 1944. Criticism of the North Dakota laws.
§ 1945. State constitutional provisions—Water courses defined.
§ 1946. Water rights defined—Abandonment.
§ 1947. Division of the State and administrative officers.
§ 1948. The appropriation of water.
§ 1949. The adjudication of existing rights.
§ 1950. Water rates.
§ 1951. The standard of measurement of water—The distribution of water.
§ 1952. Ditches and canals—Rights of way and condemnation proceedings therefor.
§ 1953. Irrigation works constructed by townships.
§ 1954. Provisions in aid of the National Reclamation Act.
§ 1955. The pollution of waters.
§ 1956. Criminal statutes.
§ 1957. Riparian rights in the State.

**§ 1942. Particular features of the State.**—The State of North Dakota is in the "Great Plains" region of the United States, and the most northerly of the five States which are included within what is known as the semi-arid region. As stated by the State engineer for the State in his last report, the total area of land which is susceptible of irrigation is 1,540,000 acres. The climate of the State is well adapted to the raising of all small fruits and grains. In the eastern portion of the State there is generally plenty of rainfall to mature crops, while in the western part the rainfall is not usually sufficient to provide for the proper growth of plant life. The Missouri River and its tributaries constitute the principal waters of the State; but for the reason that the Missouri River is from three to four hundred feet lower than the surrounding prairie, very little use up to the present time has been made of its waters, except upon what are called the first and second bench lands.[1] There is, however, plenty of flood water which may be utilized with the proper works. The climate, at times, in the winter is severely cold; but the

1 Fourth Biennial Report of the State Engineer, 1909-1910, T. R. Atkinson, State Engineer, p. 20.

growing season in the summer, computed from the average date of the last killing frost in spring to the average date of the first killing frost in autumn, is 138 days.

§ 1943. **Irrigation in the State.**—Out of the 1,540,000 acres of land in the State of North Dakota, according to the report of the State engineer, about 75,000 acres were irrigated in 1911.[1] From these figures there is still room for considerable development along this line. But, as is the case in all semi-arid States, the people are slow to take up this work, relying more upon the uncertain rainfall to mature their crops. But the people are finding out that this dependency upon the annual rainfall is, at times, doomed to disappointment. This is bound to force the use of water for irrigation in the future as a necessary adjunct to the rainfall. In many portions of the State there is the question of the drainage of lands. According to the State engineer the total area of land which can be improved by drainage is 2,780,000 acres, and out of this 475,000 acres have been improved by the construction of ditches.[2]

The Water Code of 1905 and the establishment of the office of State engineer has done much to promote irrigation in the State.

While the original Territory of Dakota, now comprising the States of North and South Dakota, came within the provisions of the Carey Act, the State of North Dakota has not accepted its provisions, and, therefore, no work has been done in this respect.[3]

Under the National Reclamation Act the Government has taken up a number of projects, notably the Williston, Buford-Trenton, and the Lower Yellowstone projects, and these have been largely constructed. A number of others were surveyed and lands under them withdrawn from entry, but these have been given up and the lands restored to entry.[4]

The State has never adopted the irrigation district law as the same has been adopted by other States, following the California law.

1 Fourth Biennial Report of the State Engineer, 1909-1910, T. R. Atkinson, State Engineer, p. 15.

2 See Report on the Drainage of Certain Counties in North Dakota, by John T. Stewart, 1907, Office Experiment Stations, Bulletin No. 189, U. S. Dept. of Agriculture.

3 For the Carey Act, see Secs. 1312-1336.

4 See the various reports of the Reclamation Service, subject: North Dakota.

See, also, the Fourth Biennial Report of the State Engineer, 1909-1910, p. 21.

However, there is a simple district law by townships and counties, and a number have taken advantage of this law, which provides simply for the levy and collection of a tax within the respective township or county for the development of irrigation.

Considerable land has been irrigated by the means of artesian wells in various portions of the State.[5]

According to the Census Report of 1910, the total number of farms irrigated in 1909 was 69, against 54 in 1899, an increase of 15, or 27.8 per cent.

The total acreage irrigated in 1909 was 10,248 acres, as against 4,872 acres in 1899, an increase of 5,376 acres, or 110.3 per cent.

The total area enterprises were capable of irrigating in 1910 was 21,917 acres. The acreage included in enterprises completed or under construction in 1910 was 38,173 acres. The area irrigated in 1909 classified by type of enterprise, shows that there were under United States Reclamation Service 1,610 acres, and under individual and partnership enterprises 8,638 acres.

**§ 1944. Criticism of the North Dakota laws.**—Our criticism of the irrigation and water right laws of the State of North Dakota is not so much in regard to the laws which are in effect, but the absence of laws. The Irrigation Code of 1905, which is still in force without any important amendments, follows the Wyoming Code, with some important changes.[1] This code, providing for the office of the State engineer and the board of water commissioners, was certainly an improvement upon the old statutes of the State governing the subject. This code is much more simple and probably just as effective as some of the more elaborate codes of other States. The provision of the code relative to the adjudication of rights by the courts, in the first instance, was, in our opinion, a wise one. If rights are of value, their adjudication eventually gets to the courts, and it is better to have them adjudicated in the first instance by the Court than to duplicate such proceedings by having them determined in the first instance by some board, and then appealed to the

[5] For information upon various phases of the subject, see: First-Fourth Biennial Reports of the State Engineer of North Dakota; the various Reclamation Service annual reports, sub.: North Dakota.

[1] For the Wyoming laws, see Chap. 104, Secs. 2097-2129.

Court. In this respect the code of North Dakota has adopted the Colorado system rather than that of Wyoming.[2]

The legislature of the State is to be criticised for not accepting the provisions of the Carey Act and providing laws for its operation. Also, with thickly populated communities in different portions of the State, an irrigation district Act would undoubtedly add to their prosperity.

**§ 1945. State constitutional provisions—Water courses defined.**—Article XVII, Section 210, of the constitution of the State of North Dakota, provides as follows:

"All flowing streams and natural water courses shall forever remain the property of the State for mining, irrigation, and manufacturing purposes."[1]

The water courses as referred to in the above constitutional provision were further defined by an Act of the legislature of 1907,[2] as follows:

"A water course entitled to the protection of the law is constituted, if there is a sufficient natural and accustomed flow of water to form and maintain a distinct and a defined channel. It is not essential that the supply of water should be continuous or form a perennial living source. It is enough if the water arises periodically from natural causes and reaches a plainly defined channel of a permanent character."

**§ 1946. Water rights defined—Abandonment.**—By the State Irrigation Code of 1905 it is provided: "All waters within the limits of the State from all sources of water supply belong to the public, and, except as to navigable waters, are subject to appropriation for beneficial use.[1]

"Beneficial use shall be the basis, the measure, and the limit of the right to use of water, and all waters appropriated for irrigation purposes shall be appurtenant to specified lands owned by the person claiming the right to use the water, so long as the water can be beneficially used thereon. Priority in time shall give the better

2 For the adjudication of water rights in North Dakota, see Sec. 1949.

For the adjudication of rights in Colorado, see Secs. 1790-1793.

1 Bigelow v. Draper, 6 N. D. 152, 69 N. W. Rep. 570.

2 Laws, 1907, p. 444.

1 Rev. Codes, 1905, Sec. 7604.

right. In all cases of claims to the use of water initiated prior to the passage of this Act the right shall relate back to the initiation of the claim upon the diligent prosecution of the necessary surveys and construction for the application of the water to a beneficial use. All claims to the use of water initiated after the passage of this Act shall relate back to the date of the receipt of an application therefor in the office of the State engineer, subject to compliance with the provisions of this Act and the rules and regulations established thereunder."[2]

When the party entitled to the use of water fails to beneficially use all or any part of the water claimed by him, for which a right of use has vested, for the purpose for which it was appropriated or adjudicated, for a period of three years, such unused water shall revert to the public, and shall be regarded as unappropriated water.[3]

§ 1947. **Division of the State and administrative officers.**—For administrative purposes the State of North Dakota is divided into four water divisions, the boundaries of which are defined by the statute. These divisions, in turn, are divided into water districts by the State engineer.[1]

*Board of Water Commissioners.*—The board of water commissioners is composed of the water commissioners of the four water divisions, together with the State engineer, who is the president thereof. It is made the duty of this board to supervise the apportionment of the waters of the State. The board has the power to make rules and regulations to govern its proceedings and the operations in the various divisions. The State engineer has a vote on all matters except appeals authorized by law from his acts. The general duties of this board are similar to those prescribed by the board of control in Wyoming, with the exception of matters relating to the determination of water rights.[2]

*State Engineer.*—As is the case in all States adopting the laws of State control of the waters flowing within their jurisdiction, the most important administrative office is that of the State engineer.

2 Rev. Codes, 1905, Sec. 7605.

3 Rev. Codes, 1905, Sec. 7651.

1 Rev. Codes, 1905, Sec. 7640. See, also, *Id.*, Sec. 7644.

2 Rev. Codes, 1905, Sec. 7643. For the duties of the Board of Control in Wyoming, see Sec. 2102.

The State engineer is appointed by the Governor and confirmed by the senate. He holds office for a term of four years, and draws a salary of $2500. He has the power to appoint an assistant engineer at a salary of $1800. He must be a technically qualified and experienced hydraulic engineer, and must make a biennial report to the Governor and recommendations for legislation. Complete records of his work must be kept in his office for public inspection. He has the power to make all necessary rules and regulations to carry into effect the duties of his office. He is required to modify such rules if the same is ordered by a vote of at least three of the four water commissioners. It is made his duty to make the hydrographic surveys of each stream system and source of water supply in the State, obtaining and recording all available data for the determination, development, and adjudication of the water supply of the State. In this he may co-operate with the agencies of the Federal Government.[3]

*Water Commissioners.*—The water commissioners of the respective water divisions are appointed by the Governor and confirmed by the senate. The general duty of a commissioner is to supervise the apportionment of the water in his division according to the licenses issued by the State engineer. His pay is fixed at $10 per day for the time actually consumed in his duties. He is also a member of the board of water commissioners.[4]

*Water Masters.*—The water masters of each water district are appointed by the water commissioners of their respective divisions. They have the immediate charge of the apportionment of the water under the supervision of the commissioners. His pay is fixed at $4 per day for the time actually consumed. He may also employ assistants in cases of emergency. He must make reports to the water commissioner, and these reports at the end of each irrigation season must be filed in the office of the State engineer.[5]

§ 1948. **The appropriation of water.**—In the appropriation of water the general scheme of that provided by the statute of Wyoming is followed.[1] It is provided that the person, association, or corporation must file an application with the State engineer to a permit. If the application is approved the work must be completed

3 Rev. Codes, 1905, Secs. 7608-7617.
4 Rev. Codes, 1905, Secs. 7641-7644.
5 Rev. Codes, 1905, Secs. 7645-7649.
1 See Secs. 2106-2109.

within the time allowed by the State engineer, not exceeding five years from the date of the approval, and the time within which the water shall be applied to a beneficial use must not exceed four years thereafter. "If, in the opinion of the State engineer, there is no unappropriated water available, he shall reject such application. He shall decline to order the publication of notice of any application which does not comply with the requirements of the law and the rules and regulations thereunder. He may also refuse to consider or approve an application or order the publication of notice thereof if, in his opinion, the approval thereof would be contrary to public interest." The works must be completed within the time allowed, and must be approved by the State engineer as to their safety and efficiency. When the works are found in a satisfactory condition the State engineer shall issue his certificate for the appropriation, setting forth the actual capacity of the works and such limitations upon the water right as shall be warranted by the condition of the works, but in no manner extending the rights described in the permit.

Upon the actual application of the water to the beneficial purpose the State engineer shall issue a license to appropriate water to the extent and under the conditions of the actual application of the water to such use. The time may be extended in which to apply the water. Any permit or license may be assigned.

Appeals may be had from the decision of the State engineer to the District Court.[2]

In the case of seepage waters the usual application must be made to the State engineer.[3]

By the Act approved March 13, 1909,[4] the State engineer was authorized to grant permits for the appropriation of flood waters of draws, coulees, or streams, and water sources, which for the greater part of the year flow less than one-third of one cubic foot per second. An application must be filed by the claimant with the State engineer, setting forth the full nature of the claim, and notice of the same must be published. If no objections to the same are filed within thirty days the State engineer shall endorse his approval on the application, and the claimant may then proceed with his construction of works. "The amount of water allowed to any person,

2 Rev. Codes, 1905, Secs. 7622-7629. See, also, Secs. 7632-7634.

3 Rev. Codes, 1905, Sec. 7662.

4 Laws, 1909, p. 179.

association, or corporation under this Act shall not be in excess of two acre-feet per acre for any one irrigation season, and in no case more than can be beneficially used."

§ 1949. **The adjudication of existing rights.**—The adjudication of all existing water rights is made by the courts in the first instance. Upon the completion of the hydrographic survey of any stream system by the State engineer he must deliver a copy thereof, together with all data, to the Attorney-General of the State, who shall, within sixty days thereafter, enter suit on behalf of the State for the determination of all rights to the use of such water. Such suit must be diligently prosecuted to a final adjudication. Such suit may be begun by private parties, in which case the Attorney-General shall intervene on behalf of the State. All claimants must be made parties. The costs in such actions are to be charged to the respective parties in proportion to the amount of water right allotted.

Upon the final adjudication of such rights two certified copies of the decree shall be prepared and one filed in the office of the State engineer, and the other in the office of the water commissioner of the proper water division. "Such decree shall in every case declare as to the water right adjudged to each party the priority, amount, purpose, place of use, and as to water used for irrigation, the specific tracts to which it shall be appurtenant, together with all other conditions as may be necessary to define the right and its priority."[1]

In any water suit the Court may appoint a referee or referees, not exceeding three, to take testimony and report upon the rights of the parties as in other cases.[2]

§ 1950. **Water rates.**—The owner of any works for the storage, diversion, or carriage of water which contain water in excess of their needs for irrigation or other beneficial purposes for which it has been appropriated, shall be required to deliver such surplus "at reasonable rates for storage, or carriage, or both, as the case may be, to the parties entitled to the use of the water for beneficial purposes. In case of the refusal of such owner or owners to deliver any such surplus water at reasonable rates as determined by the

1 Rev. Codes, 1905, Secs. 7617-7621. 2 Rev. Codes, 1905, Sec. 7636.

State engineer, they may be compelled to do so by the District Court" of the proper county.[1]

**§ 1951. The standard of measurement of water—The distribution of water.**—The standard of measurement of the flow of water is one cubic foot per second of time; the standard of measurement of the volume of water shall be the acre-foot, equivalent to 43,560 cubic feet. The miner's inch shall be regarded as one-fiftieth of a cubic foot, except when otherwise stated in a contract.[1]

In the issuance of permits for irrigation or the adjudication of rights for such purpose, the amount allowed shall not be in excess of one cubic foot of water per second for each eighty acres.[2]

All water used in the State for irrigation shall remain appurtenant to the land upon which it is used, but by application to the State engineer the right to its use may be transferred to other lands.[3] The change of use or the place of diversion may also be made.[4]

"The water master shall have immediate charge of the apportionment of the waters in his district under the general supervision of the water commissioner, and he shall so apportion, regulate and control the waters of the district as will prevent waste."[5]

**§ 1952. Ditches and canals—Rights of way and condemnation proceedings therefor.**—Rights of way are granted over all lands owned by the State for the works under discussion, and all conveyances of State lands thereafter made shall contain a reservation of such rights of way.[1]

The United States, the State, or any person, corporation, or association may exercise the right of eminent domain to acquire for public use "any property or rights" now or hereafter existing when found necessary for the application of water to beneficial uses. "Such property or rights may be acquired in the manner provided by law for the taking of private property for public use." No special proceedings for the condemnation of these particular rights are provided.[2]

1 Rev. Codes, 1905, Sec. 7638.
1 Rev. Codes, 1905, Sec. 7650.
2 Rev. Codes, 1905, Sec. 7652.
3 Rev. Codes, 1905, Sec. 7653.
4 Rev. Codes, 1905, Sec. 7654.
5 Rev. Codes, 1905, Sec. 7646.
1 Rev. Codes, 1905, Sec. 7663.
2 Rev. Codes, 1905, Sec. 7606.

Water appropriated may be turned into any natural or artificial water course by any party entitled to the use thereof, and may be reclaimed below by such party, subject to existing rights, due allowance being made for losses, as determined by the State engineer.[3] All works may be inspected by the State engineer and ordered repaired if found defective.[4]

Measuring devices must be constructed in[5] and bridges over ditches and canals at roads, at the expense of the owners.[6]

**§ 1953. Irrigation works constructed by townships.**—On February 11, 1890, there was approved an Act which had been passed by the legislature of the State of North Dakota, entitled, "An Act to allow organized townships to raise a tax for irrigation purposes."

"Section 1. Whenever ten legal voters of any organized township petition the town board fifteen days previous to an annual town meeting to submit the subject of irrigation, by building dams to create ponds or reservoirs on any of the creeks or coulees in said township, it shall be the duty of said town board to submit the question to the voters at the next annual town meeting, and the town clerk shall cause three notices to be posted specifying the place and nature of said improvements."

The Act provides that whenever two-thirds of the legal voters of any town shall agree at their town meeting that the water supply should be increased for the purpose of irrigation it shall be lawful that a tax be levied for the purpose of constructing the works necessary by and under the directions of the board of supervisors of said town: *Provided,* such improvements shall be wholly in said town. And the Act authorizes a tax to be levied, which shall not exceed two mills on the dollar, upon the assessed valuation of the property.[1]

**§ 1954. Provisions in aid of the National Reclamation Act.**—The authority is given the United States to appropriate water under the National Reclamation Act, and whenever the officers of the service shall notify the State engineer that the United States intends to utilize certain specified waters, the waters so described and unappropriated at the date of the notice shall not be subject to further

appropriation for a period of three years thereafter. Such waters may be restored to appropriation upon the abandonment of the project by the Government.[1] Any lands belonging to the State under Government projects shall be sold only in conformity with the classification of farm units by the United States.[2] The right of condemnation is also given the United States to acquire any property or rights necessary for these projects.[3]

§ 1955. **The pollution of waters.**—Every person who deposits or places or causes to be deposited or placed any dead animal, offal, or refuse matter offensive to sight or smell or deleterious to health upon the banks or in the waters of any lake or stream within the State is guilty of a misdemeanor, punishable by a fine of not less than $20 and not exceeding $100.[1]

§ 1956. **Criminal statutes.**—The unlawful interference with rights to the use of water, the unlawful use of water, or the waste of water, and the unlawful obstruction of any works, are made misdemeanors, and punishable by a fine of not more than $250 nor less than $20, or by imprisonment in the county jail not exceeding six months, or both.[1] Unlawfully diverting water from any irrigation ditch is punishable by a fine of not less than $25 nor more than $50.[2]

By an Act of 1911 [3] it is further provided that if any person, municipality, or corporation, without authority of law, wilfully obstructs any ditch, drain, or water course, or diverts water therein from its natural or artificial course, such person shall be liable to the party suffering injury from such obstruction or diversion for the full amount of the injury occasioned thereby; and in addition thereto shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not exceeding $100, or imprisonment in the county jail not exceeding three months.

§ 1957. **Riparian rights in the State.**—As to the common law of riparian rights in the State of North Dakota, it can be said that they are recognized, but to a limited extent. As far as the right of the

1 Rev. Codes, 1905, Sec. 7639.
2 Rev. Codes, 1905, Sec. 7664.

2 Rev. Codes, Secs. 9313, 9314.
3 Laws, 1911, p. 590.

riparian proprietor to the undiminished flow of a stream, without actual use is concerned, the common law may be considered abrogated by the Irrigation Code of 1905, in which it is declared that all waters within the limits of the State belong to the public, and, except as to navigable waters, are subject to appropriation for beneficial use; and that beneficial use shall be the basis, the measure, and the limit of the right to use of water.[1]

It is further provided by the statute that: "The owner of the land owns water standing thereon or flowing over or under its surface, but not forming a definite stream. Water running in a definite stream formed by Nature over or under the surface may be used by him as long as it remains there, but he may not prevent the natural flow of the stream or of the natural spring from which it commences its definite course, nor pursue the same."[2]

However, as far as rights of riparian owners are concerned which had vested prior to the adoption of the code of 1905 as to the actual use of the waters of the natural streams, as we view the law of the State, they remain intact only to the extent of the actual use of the water for a beneficial purpose. The old common law rule as laid down in the case of Sturr v. Beck,[3] to the effect that a riparian owner in the old Territory of Dakota had a right to the undiminished flow of a stream running by his lands, as a part and parcel thereof, regardless of use, may be considered as far as North Dakota is concerned to be abrogated by the provisions of the code if not overruled by later decisions of the Supreme Court of the United States.[4]

# CHAPTER 96.

## OKLAHOMA.

§ 1958. Particular features of the State.
§ 1959. Irrigation in the State.
§ 1960. Criticism of the Oklahoma laws.
§ 1961. State constitutional provisions.
§ 1962. Title to water—Water rights defined.
§ 1963. The right of appropriation—Condemnation of rights.
§ 1964. Administrative officers.
§ 1965. The appropriation of water.
§ 1966. The adjudication of existing rights.
§ 1967. Ditches and canals, etc., and rights of way therefor.
§ 1968. Corporations and companies.
§ 1969. The standard of measurement and the distribution of water.
§ 1970. Provisions in aid of the National Reclamation Act.
§ 1971. Criminal statutes.
§ 1972. Riparian rights in Oklahoma.

§ 1958. **Particular features of the State.**—Oklahoma is a semi-arid State. In the eastern portion there is ample rainfall for the maturity of crops. The soil is rich, deep, and enduring. The climate of the western part of the State is similar to that of Kansas and Nebraska—dry and arid. The Cimarron River, which rises in the mountains in the eastern part of New Mexico, flows across the northwestern part of the State into Kansas. This stream and its numerous spring-fed branches, including that of Beaver Creek, furnish an ample supply of water to the ditches taken from them. Its valley is narrow, but fertile, and the soil when watered is well adapted to the cultivation of all the crops of the temperate zone.

§ 1959. **Irrigation in the State.**—In the State of Oklahoma the necessity for irrigation is not so imperative as in other States west of the 100th meridian. The irrigated tracts of land are principally confined to the counties in the extreme northwestern part of the State. And although no great amount has been irrigated as compared to other States, a considerable start has been made along that line.

As reported by the census of 1910, the number of farms irrigated in 1909 was 137, as against 124 in 1899, an increase of 13, or 10.5 per cent.

The total acreage irrigated in 1909 was 5402 acres, as against 2,759 in 1899, an increase of 2,643 acres, or 95.8 per cent.

The total acreage which all enterprises were capable of irrigating in 1910 was 7,411. The area included in projects then completed or under construction was 9,442.

The acreage irrigated in 1909, classified by type of enterprise, was as follows: Under co-operative enterprises, 2,000 acres, and under individual and partnership enterprises, 3,402 acres. No irrigation enterprises in the State are reported as operated under the National Reclamation Act, the Carey Act, or irrigation district laws.

§ 1960. **Criticism of the Oklahoma laws.**—Very little criticism can be made adverse to the Oklahoma Water Code. It is based largely upon those of North and South Dakota, and is simple and effective. The appropriation of water must be by application to the State engineer, and the adjudication of rights is left at all stages to the courts, where it properly belongs. Special favors seem to have been given to corporations appropriating water for sale or rental, and at the same time the rights of communities to organize themselves into irrigation districts seem to have been ignored. This seems to be somewhat peculiar, owing to the general tendency of the Oklahoma constitution and laws. An irrigation district law should be enacted, and thus enable those under the same water system to organize themselves into a public corporation and govern and regulate their own affairs. Ample provisions are enacted in aid of the National Reclamation Act. The Carey Act does not apply to the State, hence there are no provisions for its operation.

§ 1961. **State constitutional provisions.**—Article XVI, Section 3, of the constitution of Oklahoma provides:

"The legislature shall have the power and shall provide for a system of levees, drains, and ditches and of irrigation in this State when deemed expedient, and provide for a system of taxation on the lands affected or benefited by such levees, drains, and ditches, and irrigation, or on crops produced on such land, to discharge such bonded indebtedness or expenses necessarily incurred in the establishment of such improvements, and to provide for compulsory issuance of bonds by the owners or lessees of the lands benefited or affected by such levees, drains, and ditches, or irrigation."

Article II, Section 23, also provides:

"No private property shall be taken or damaged for private use without compensation unless by consent of the owner, except for private ways of necessity, or for drains and ditches across the lands of others for agricultural, mining, or sanitary purposes, in such manner as may be prescribed by law."

**§ 1962. Title to water—Water rights defined.**—"The unappropriated waters of the ordinary flow or underflow of every running stream or flowing river, and the storm or rain waters of every river or natural stream, canyon, ravine, depression, or watershed within those portions of the State of Oklahoma in which, by reason of the insufficient rainfall, or by reason of the irregularity of the rainfall, irrigation is beneficial for agricultural purposes, are hereby declared to be the property of the public, and may be acquired by appropriation for the uses and purposes and in the manner as hereinafter provided." [1]

**§ 1963. The right of appropriation—Condemnation of rights.**—In 1905 the legislature of the then Territory of Oklahoma adopted a Water or Irrigation Code, the provisions of which are largely the same as those of North and South Dakota, discussed in other chapters of this part.[1] And in that code the right of the appropriation of waters was granted, upon the following conditions:

"Beneficial use shall be the basis, the measure, and the limit of the right to the use of water, and all waters appropriated for irrigation purposes shall be appurtenant to specific lands owned by the person or persons claiming the right to use the water, so long as the water can be beneficially used thereon. Priority in time shall give the better right. In all cases of claims to the use of water initiated prior to the passage of this Act the right shall relate back to the initiation of the claim, upon the diligent prosecution to completion of the necessary surveys and construction for the application of the water to a beneficial use. All claims to the use of water after the

For laws or South Dakota, see Chap. 100, Secs. 2024-2039.

passage of this Act shall relate back to the date of the receipt of an application therefor in the office of the State engineer, subject to compliance with the provisions of this Act and the rules and regulations established thereunder."[2]

The right to appropriate storm or rain waters and to store the same is also granted.[3] The failure to use the water appropriated for a period of two years forfeits the right.[4]

"The appropriation of water must be either for irrigation, mining, milling, construction of water works for cities and towns, or stock raising."[5]

The right is given to condemn water rights under the following conditions: "The beneficial use of water is a public use, and every person, corporation, or association may exercise the right of eminent domain to acquire any right now or hereafter existing to the use of water for beneficial purposes."[6]

**§ 1964. Administrative officers.** — *State Engineer.* — The law upon the subject of the State engineer is in a peculiar condition in the State of Oklahoma. All through the Water Code the State engineer is referred to and certain duties prescribed. But there is no statutory provision for the creation and maintenance of the office of the State engineer. However, by statute it is made the duty of the secretary of the state board of agriculture to perform all the duties assigned to the State engineer in the code: Provided, that the said secretary is empowered by and with the advice and consent of the Governor to temporarily employ the services of a technically qualified and experienced civil engineer for the purpose of examining, investigating, or determining upon any professional engineering question, the salary of such engineer not to exceed $6 per day.[1] The usual duties are assigned to the State engineer, similar to those assigned to the engineers of North and South Dakota, and in the meantime these duties are being performed by the secretary of the state board of agriculture. He may make all necessary rules, and his records are public.[2]

1 Comp. Laws, 1909, Sec. 3982.

2 Comp. Laws, 1909, Secs. 3979, 3980.

*Water Masters.*—It is not provided by the statute for the dividing of the State into water divisions, as is the case in many of the States. Hence there is no officer provided for such divisions. But it is provided that the State engineer shall from time to time, as may be necessary for the economical and satisfactory apportionment of the water, divide the State in conformity with drainage areas into water districts, to be designated by name, and to comprise, as far as possible, one or more distinct stream systems. The State engineer may, with the approval of the Governor, appoint a water master for each district, who may be removed by the State engineer. "Each water master shall have the immediate charge of the apportionment of the waters in his district under the general supervision of the State engineer, and he shall so apportion, regulate, and control the waters of his district as will prevent waste. Each water master must report directly to the State engineer, and appeals are allowed from his decisions to the State engineer.[3]

§ 1965. **The appropriation of water.**—The appropriation of water under the code also follows the codes of North and South Dakota.[1] An application must be made to the State engineer in accordance with the forms prescribed by the statute and the rules and regulations prescribed by the State engineer.[2] Notice must be published of the application and a hearing had at which all parties interested may be heard. "If, in the opinion of the State engineer, there is no unappropriated water available, he shall reject the application." Any applicant may appeal from the decision of the State engineer to the District Court. The time allowed for the completion of the work of construction shall not exceed five years, and the time within which the water must be applied to a beneficial purpose shall not exceed four years in addition. An inspection of the works must be made by the State engineer upon notice of their completion; and if the works are satisfactory, the State engineer shall issue his certificate of completion. Unsafe works must be changed to the satisfaction of the State engineer. The use of works declared unsafe by the State engineer is made a misdemeanor. Before the application of the water to a beneficial use the State engineer shall cause the works to be again inspected, and if the same

1 See Secs. 1946, 2029.

are satisfactory he shall issue his license to appropriate. Any permit or license may be assigned.[3]

An application to appropriate seepage water must also be made to the State engineer.[4]

**§ 1966. The adjudication of existing rights.**—The adjudication of existing rights in the State of Oklahoma is entirely with the courts, and the procedure prescribed by the statute is largely based upon that of North and South Dakota.[1] The first step to be taken is by the State engineer, who shall make hydrographic surveys of each stream system; and after such surveys all data necessary for the determination of rights must be delivered to the Attorney-General of the State, who, within sixty days thereafter, must bring suit on behalf of the State and make all parties interested parties to such suit. The suit may be begun by private parties, in which case it is made the duty of the Attorney-General to intervene on behalf of the State. Copies of all decrees in such actions must be filed in the office of the State engineer and the register of deeds of the proper county. The decree must set forth all facts necessary to define the right and its priority, and the specific tract of land to which the right is appurtenant if the appropriation was for irrigation.[2]

**§ 1967. Ditches and canals, etc., and rights of way therefor.**—Rights of way over all State lands are granted for ditches, canals,

For the adjudication of rights, see Gates v. Settlers' etc. Co., 19 Okla. 83, 91 Pac. Rep. 856.

A petition for an injunction to restrain action by the State engineer and an applicant for water rights on a certain stream until hydrographic survey could be made under the statute and the rights of all claimants determined, and which shows that petitioners had previous to the date of filing of the application duly and lawfully appropriated to a beneficial use all of the waters of a stream, but that no hydrographic or judicial determination of their rights had ever been made, and which petition of applicant would be to destroy a long established irrigation system erected at a cost of $50,000, and that the applicant was not acting in good faith in seeking such water rights for the purpose of putting the water applied to a beneficial purpose, but merely for speculative purposes, states a cause of action. Gay v. Hicks, —— Okla. ——, 124 Pac. Rep. 1077.

and other works, and the right of condemnation of private lands given for the same purpose.[1] Water turned into any natural or artificial water course by any party entitled to the use of the same may be reclaimed below and diverted therefrom by such party, subject to existing rights, due allowance for losses being made by the State engineer.[2] Headgates, measuring devices, and bridges must be constructed at the expense of the owners.[3]

Unless the owners of ditches and canals or other works shall fence such works, "then there shall accrue in their favor no cause of action against the owners of live stock for any trespass thereon.[4]

**§ 1968. Corporations and companies.**—The organization of corporations is encouraged for the purpose of constructing all necessary works and of conducting water to all persons entitled to the same. All such corporations are given full power to make contracts for the sale of permanent water rights, and to have the same secured by liens on the land or otherwise, and also to lease or rent such water rights for such terms as they may see fit. All persons owning land adjoining any canal or other works are entitled to receive water. In case of a shortage of water it must be divided *pro rata* among those entitled thereto.[1] Such corporations also have a preference lien on the land or crops raised upon the land irrigated under a lease or contract.[2] Such corporations may borrow money and acquire lands.[3]

**§ 1969. The standard of measurement and the distribution of water.**—"The standard of measurement of the flow of water shall be the cubic foot per second of time; the standard of measurement of volume of water shall be the acre-foot."[1] One cubic foot per second may be allowed to each seventy acres.[2]

Water appropriated for irrigation, although declared to be appurtenant to specific tracts, may be changed to other lands upon application to the State engineer, without losing the priority of

1 Comp Laws, 1909, Sec. 3955.
2 Comp. Laws, 1909, Sec. 3953.

right.[3] So, also, may the use of the water, by the same method, be changed from that for which it was originally appropriated to some other use.[4]

The distribution of the water in the State is assigned to the State engineer for general supervision,[5] and under him the water masters.[6]

The owner or owners of any works which contain water in excess of their needs for irrigation or other beneficial purposes are required to deliver such surplus, at reasonable rates for storage, or carriage, or both, to the parties entitled to the use of the water. In case of refusal of such owners to deliver such surplus water at reasonable rates as determined by the State engineer, they may be compelled to do so by the District Court of the proper county.[7]

All water not used must be conducted back to the natural stream.[8]

**§ 1970. Provisions in aid of the National Reclamation Act.**—Water may be appropriated by the United States under the provisions of the National Reclamation Act.[1] And for this purpose water may be reserved from private appropriation for a period of three years from the date of a notice by the proper official that certain specified waters are about to be utilized: Provided, that in case of failure of the Government to file plans for the proposed works within three years the waters shall become public water, subject to general appropriation.[2] A right of way is granted the Government over all State lands, and all State lands under such projects shall be sold only in conformity with the classification of the farm units by the United States. Water users' associations are provided for, and the county commissioners are authorized to accept from such associations books containing printed copies of their articles and forms of subscription to stock, and to use such books for recording the same. Where unappropriated waters have been filed upon prior to the action of the Government, any water users' association is authorized and empowered to reimburse such person, association, or corporation for any and all actual outlays or moneys expended in making necessary surveys, securing title to sites, and right of way,

either by condemnation or by purchase, and for all work of construction actually done upon such irrigation system, together with interest upon the same from the date of expenditure to the time of settlement: Provided, that in case of dispute when the matter shall be referred to the State engineer for determination, such determination shall be final.[3]

§ 1971. **Criminal statutes.**—It is made unlawful for others to divert water already appropriated.[1] The unlawful interference with or injury to any irrigating canal or other works is made a misdemeanor.[2] The use of works declared unsafe by the State engineer is also made a misdemeanor.[3] So, also, the waste of water to the detriment of another.[4] The placing or maintaining of any obstruction that will interfere with the use of works is also made a misdemeanor.[5] All violations of the law declared to be a misdemeanor shall be punished by a fine not exceeding $250 nor less than $20, or by imprisonment in the county jail not exceeding six months, or by both. The justices' courts are given jurisdiction.[6]

§ 1972. **Riparian rights in Oklahoma.**—Riparian rights in the State of Oklahoma are recognized, but not to the extent that they are enforced under the strict rule of the common law. By the adoption of the Water Code, which is applicable to those portions of the State in which, by reason of the insufficient rainfall, irrigation is beneficial, the rights of riparian owners are very much limited and restricted. "Beneficial use shall be the basis, the measure, and the limit of the right to the use of water," is the provision of the code.[1] By another section, "the owner whose land abuts on a running stream may use such water therefrom as may be necessary for domestic purposes." This provision also limits the right of riparian owners to the use of water for such purpose alone by virtue merely of his ownership. The common law rule as to the undiminished flow of a stream, without use, may be deemed as abrogated by statute in the State. As to other rights of riparian owners, such as the

right to prevent pollution of streams flowing by their lands or for damages therefrom, it is held that such owners have such a property right in the flow of the stream undeteriorated in quality as will give them a right of action therefor.[2]

§ 1996. Criminal statutes.
§ 1997. Riparian rights in Oregon.

**§ 1973. Particular features of the State.**—The State of Oregon is divided by the Cascade range of mountains into two divisions, which are very dissimilar in climate, topography, and soil. The western division has a very heavy rainfall, and, therefore, irrigation is not practiced to a great extent, although in the southern portion, in order to mature late crops, there is some use of water for this purpose. That portion of the State lying east of the Cascade range may be properly classed within the arid region, although some portions are really semi-arid. The formation of the soil is largely volcanic, and when supplied with sufficient moisture is among the most productive in the world. There are a number of rivers of considerable size, and the available water supply upon the whole is large. In this section the climate is mild and there are few portions of the

State where crops can not be matured before the fall frosts. But, as in other mountainous States, the climate depends largely upon the altitude. In this portion of the State, water, next to the land, is the greatest asset; and, the two combined, constitute a resource which, fully developed, it is now impossible to foretell the result.

There are a number of artesian basins which have been exploited and from which good results are expected.[1]

§ 1974. **Irrigation in the State.**—In the greater portion of the eastern division of the State of Oregon, irrigation may be deemed a necessity to the full development of the State. Yet with millions of acres of land and a water supply that is the envy of other States, up to the last few years, irrigation in the State has been developed in a rather small way, as compared with some of the other States, where the water supply is much smaller. The greater portion of the population living west of the Cascade range of mountains, where irrigation was considered more as a luxury than as a necessity, very little attention was paid to the subject as relating to the eastern division of the State. As a result the development of this division of the State was hampered by inadequate laws governing the subject of waters and water rights. And it was not until the Act of 1909 that there was enacted an adequate water code. The legislature was also slow in providing funds for stream measurements and topographical surveys, and although great things have been accomplished in the past, with the adoption of the new Water Code of 1909, hereafter discussed in this chapter, more can be expected in the future.[1]

Oregon also has upon its statute books an irrigation district law.[2] But as yet few districts have been organized. This is partially due to a defect in the law, rendering it difficult to secure sufficient money to organize the project and prepare the necessary plans and

1 See Geology and Water Resources of the Harney Basin, Oregon, by Gerald A. Waring, 1909, Water-Supply Paper No. 231, U. S. Geological Survey.

1 Oregon is one of the States to be benefited by the provisions of the Carey Act, and according to the last report of the State engineer, contracts have been executed by the State where the cost to future settlers amounts to over $22,000,000. Third Biennial Report of the State engineer of the State of Oregon, 1909-1910, pp. 89-93.

2 For irrigation districts, see Chap. 65, Secs. 1235-1286.

For Oregon district law, see Sec. 1993.

specifications.[3] However, by the Act of 1911, the board of directors is given the power to incur an indebtedness not exceeding $5000 for this purpose.[4]

The United States Reclamation Service, under the provisions of the National Reclamation Act,[5] is also constructing the Umatilla project, and several other projects have been surveyed.[6] Besides this there is the Klamath project, located partly in Oregon and partly in California, which is largely constructed and under operation.[7]

Besides the above, a great many private enterprises have been projected, and many of which have been completed. With the present projected enterprises completed, in addition to those in operation, the reclamation of arid lands in Oregon will be greatly increased during the next decade. This will be aided greatly by the construction of the railroads now being built to reach many of the arid lands of the State. These lands heretofore have been inaccessible, and the settlers were slow to come where they could have no market for their crops.[8]

According to the Census Report of 1910, the total number of farms irrigated in 1909 was 6,669, as against 4,336 in 1899, an increase of 2,033, or 43.9 per cent.

The total acreage irrigated in 1909 was 686,129 acres, as against 388,310 acres in 1899, an increase of 297,819 acres, or 76.7 per cent.

The total acreage which all enterprises were capable of irrigating in 1910 was 830,526 acres. The acreage included in projects, either completed or under construction in 1910 was 2,527,208 acres, an excess of 1,841,079 acres over the area irrigated in 1909. This indicates the area which will be available within the next few years

Dept. of Agriculture, Bulletin No. 209; Irrigation Experiments and Investigations in Western Oregon, by A. P. Stover; *Id.*, Bulletin No. 226; Irrigation Practice Among Fruit Growers on the Pacific Coast, by E. G. Wickson; *Id.*, Bulletin No. 108; Third Biennial Report of the State Engineer of Oregon for 1909-1910, John H. Lewis, State engineer; the various Reports of the Reclamation Service, subject, Oregon.

See, also, the water laws of Oregon, published by authority, 1911.

for the extension of irrigation, and shows that the area irrigated can be almost tripled without the construction of additional works.

The acreage irrigated in 1909, classified by type of enterprise, was as follows: Under the United States Reclamation Service, 22,000 acres; under United States Indian Service, 429 acres; under the Carey Act, 24,750 acres; under irrigation districts, 1,500 acres; under co-operative enterprises, 149,985 acres; under commercial enterprises, 77,387 acres; under individual and partnership enterprises, 410,078 acres.

§ 1975. **Criticism of the Oregon laws.**—The State of Oregon was late in adopting a comprehensive code of water laws, and it was not until the year 1909 that such a code was enacted by the legislature that was in any way fitted to the utmost development of her water resources. While today Oregon has a system of water laws equal in effectiveness to any State in the West, it was a struggle to bring this about. Starting in with the adoption of the strict rule of the common law theory of riparian rights even as to the undiminished flow of the water in the natural streams, the statutes enacted at various times as the needs and necessities of the State became more and more apparent, have gradually invaded that rule until, as to the use of the waters for all beneficial purposes, there is very little left of that ancient exposition of the law of waters in the State. The late decisions of the Supreme Court, especially that of Hough v. Porter, have aided materially in defining and limiting the rights of riparian proprietors to the flow of the stream.[1] While the rights of riparian proprietors in the State are not entirely abrogated, they are so limited that they can not claim the waters of the natural streams, except for actual use. A proprietor can not lay claim to the undiminished flow of a stream, without actual use, simply because it adds beauty to the outlook.

Upon the subject of water rights and the appropriation of water for beneficial uses and purposes, the Water Code of 1909,[2] as compared with the old laws upon the subject was decidedly revolutionary in character. Theretofore, riparian rights were considered

1 For riparian rights in Oregon, see Sec. 1997; Hough v. Porter, 51 Ore. 318, 95 Pac. Rep. 732, 98 Pac. Rep. 1083, 102 Pac. Rep. 728.

2 Laws, 1909, Chap. 216, p. 319, Secs. 1-73; also, Chap. 6, Title 43 of Lord's Oregon Laws, Secs. 6594 *et seq.*

paramount to all other rights, and that, too, regardless of the use of the water by the riparian owner. But, by the new code, as will be seen in our abstract of the same, just the reverse is the law at the present time. The right to the use of water by appropriation as specially provided for by the code is paramount to any other rights, including the common law of riparian rights. Vested riparian rights, however, are protected, but then only under the limitation and restrictions, as imposed by the code, that the riparian owner, in order to preserve his right must actually use the water for some beneficial use or purpose, and that such use must not be abandoned for a period of two years, and when he has made the proper filing of his claim in the office of the Secretary of State. This rule practically places the riparian owner and the appropriator upon the same footing as to the use of the water of the natural streams, the basis of the right being the application of the water to some beneficial use or purpose.

Upon the subject of the adjudication of existing water rights, the Oregon statute differs from that of Wyoming, Nevada, and Nebraska, in that, instead of allowing an appeal to the court from the determination, all orders of the board must be confirmed or modified by proceedings in the circuit court. The adjudication of the court, as indicated by the statute, must be upon the evidence presented before the board, with such other evidence as the court may direct the superintendent of the division to take. The chief aim of this statute, evidently, was to expedite the proceedings of adjudicating these rights, as considerable fault had been found against the Oregon courts for the delay in these actions. But, whether the object of the law will be accomplished or not in this respect, remains to be seen. The law is now of too recent origin to determine. In the last report of the State engineer he, by way of recommendation, says: "In making the determination of the board of control final and eliminating the circuit court from the proceedings altogether, the time occupied in completing a determination will be reduced considerably."[3] This idea of eliminating the courts we believe to be wrong. The right of review by the courts in these determinations, in some mode of procedure, can not, nor should it be, denied. To turn over the final determination and adjudication of one of the greatest property rights of individuals, within a State, to a

[3] Third Biennial Report of the State Engineer of Oregon, 1909-1910, p. 68.

board of engineers, without the right, in some manner, of review by the courts, is beyond the constitutional power of a legislature. Besides, it is better that there should be some delay in these adjudications than that a single individual should be devested of his vested property rights in an unconstitutional and unlawful manner.

The provisions for the acceptance and operation of the Carey Act, are in the usual form, and by the system of State control and supervision, fully protect all interests.

The irrigation district law, although imperfect at first, is now ample for the organization of these public corporations, for the irrigation of lands in thickly settled communities.

In general, upon the subjects of the adjudication of existing water rights, the appropriation of water, and its distribution, the statutes follow largely those of Wyoming, hereinafter discussed.[4]

**§ 1976. Water rights defined—Right to collect water rates a franchise.**—The State of Oregon has no constitutional declarations relative to the subject of waters.

Upon the subject of the title to the waters, by the statute it is declared:

"All water within the State from all sources of water supply belongs to the public."[1]

The right to collect water rates is declared to be a franchise in the following terms:

"The use of the water of the lakes and running streams of the State of Oregon, for general rental, sale, or distribution, for the purposes of irrigation, and supplying water for household and domestic consumption, and watering live stock upon dry lands of the State, is a public use, and the right to collect rates or compensation for such use of said water is a franchise. A use shall be deemed general within the purview of this Act when the water appropriated shall be supplied to all persons whose lands lie adjacent to or within the reach of the line of the ditch or canal or flume in which said water is conveyed, without discrimination other than priority of contract, upon payment of charges therefor, as long as there may be water to supply."[2]

4 For the laws of Wyoming, see Chap. 104, Secs. 2097-2129.

1 Lord's Oregon Laws (hereinafter cited as L. O. L.), Sec. 6575.

2 L. O. L., Sec. 6525; Umatilla Irr. Co. v. Barnhart, 22 Ore. 389, 30 Pac. Rep. 37.

The use of water for mining and electric power is declared a public use in the following terms:

"The use of the water of the lakes and running streams of the State of Oregon for the purposes of developing the mineral resources of the State and to furnish electric power for all purposes, is declared to be a public beneficial use and a public necessity, and the right to divert unappropriated waters of any such lakes or streams for any such public and beneficial use is hereby granted." [3]

By the Water Code of 1909, it was declared, as to the right of appropriation:

"Subject to existing rights, all waters within the State may be appropriated for beneficial use, as herein provided, and not otherwise; but nothing herein contained shall be so construed as to take away or impair the vested right of any person, firm, corporation, or association to any water." [4]

**§ 1977. The preservation of rights acquired under old laws.**—In the Water Code of 1909, which provided for a new method as to the appropriation, distribution, and determination of existing water rights, it was especially provided that all existing rights, which had been acquired under former laws, should be preserved, subject to the following limitations and conditions:

"1. Nothing in this Act contained shall impair the vested right of any person, association, or corporation to the use of water.

"2. Actual application of water to beneficial use prior to the passage of this Act by or under authority of any riparian proprietor, or by or under authority of his predecessors in interest, shall be deemed to create in such riparian proprietor a vested right to the extent of the actual application to beneficial use: Provided, such use has not been abandoned for a continuous period of two years.

"3. And where any riparian proprietor, or under authority of any riparian proprietor or his predecessor in interest, any person or corporation shall, at the time this Act is filed in the office of the Secretary of State, be engaged in good faith in the construction of works for the application of water to a beneficial use, the right to

[3] L. O. L., Sec. 6551.

See, also, Grande Ronde Elec. Co. v. Drake, 46 Ore. 243, 78 Pac. Rep. 1031; McMinnville v. Howenstein, 56 Ore. 451, 109 Pac. Rep. 81.

[4] L. O. L., Sec. 6594.

take and use such water shall be deemed vested in such riparian proprietor: Provided, such works shall be completed and said water devoted to a beneficial use within a reasonable time after the passage of this Act. The board of control, in the manner hereinafter provided, shall have power and authority to determine the time within which such water shall be devoted to a beneficial use. The right to water shall be limited to the quantity actually applied to a beneficial use within the time so fixed by the board of control.[1]

"4. Nor shall anything in this Act contained affect relative priorities to the use of water between or among parties to any decree of the courts rendered in causes determined or pending prior to the taking effect of this Act.

"5. Nor shall the right of any person, association, or corporation to take and use water be impaired or affected by any of the provisions of this Act where appropriations have been initiated prior to the filing of this Act in the office of the Secretary of State, and such appropriators, their heirs, successors, or assigns shall, in good faith, and in compliance with laws existing at the time of filing this Act in the office of the Secretary of State, commence the construction of works for the application of the water so appropriated to a beneficial use, and thereafter prosecute such work diligently and continuously to completion, but all such rights shall be adjudicated in the manner provided in this Act."

6. The board of control is also given the authority, in the cases mentioned in subdivisions 3 and 5, above, to prescribe the time within which the full amount of water shall be applied to a beneficial use, and in so doing shall take into consideration the cost of the appropriation and application of such water to a beneficial purpose, the good faith of the appropriator, the market for the water or power to be supplied, the present demands therefor, and the income or use that may be required to provide fair and reasonable returns upon the investment. Upon making such order the board of control shall direct the State engineer to issue a certificate showing such determination. For good cause shown the board of control may extend the time by granting further certificates.

1 Where the defendants made no appropriation of the water in controversy, and all parties based their rights thereto as riparian owners, the decree will be predicated on that ground, since L. O. L., Sec. 6595, recognizes the doctrine of riparian ownership. Pacific Live Stock Co. v. Davis, —— Ore. ——, 119 Pac. Rep. 147.

"7. And where appropriations of water heretofore attempted have been undertaken in good faith, and the work of construction or improvement thereunder has been in good faith commenced and diligently prosecuted, such appropriations shall not be set aside or avoided in proceedings under this Act because of any irregularity or insufficiency of the notice by law, or in the manner of posting, recording, or publication thereof.

"8. All rights granted or declared by this Act shall be adjudicated and determined in the manner and by the tribunals as provided in this Act. This Act shall not be held to bestow upon any person, association, or corporation any riparian rights where no such rights existed prior to the time this Act takes effect." [2]

**§ 1978. Administrative officers, and duties.**—By the Act of 1909, the State of Oregon was divided into two water divisions, and administrative officers provided and their powers and duties defined. In this respect the statutes of Wyoming were closely followed, which will be fully discussed under the statutes of that State.[1]

The administrative officers and their duties are as follows:

*Board of Control.*—The State engineer and the superintendents of the two water divisions constitute the board of control, which, under the regulations as may be prescribed by law, "have the supervision of the waters of the State and of their appropriation, distribution, and diversion, and of the various officers connected therewith." The decisions of the board are subject to appeal to the circuit and Supreme Courts. The said board has its office at Salem, and shall hold two regular meetings each year, with power of adjournment. The State engineer is *ex officio* president of the board, and has the right to vote on all questions coming before it. A majority of said board constitutes a quorum to do business.[2] The board is given the authority to appoint a secretary and other assistants. The members of the board may administer oaths in the performance of their official duties. The attorney general and the district or prosecuting

2 L. O. L., Sec. 6595.

1 L. O. L., Sec. 6609.

For the administrative officers of the State of Wyoming, see Secs. 2102-2105.

See, also, for the laws of State control, Chap. ——, Secs. ——.

For the adjudication of water rights by boards, see Chap. 80, Secs. 1585-1595.

2 L. O. L., Sec. 6603.

attorney of the county are the legal advisers of the board and of the State engineer.[3]

*State Engineer.*—The State engineer is elected by the voters of the State, to hold office for a term of four years, and draws a salary of $3,000 per annum. He must be technically qualified and experienced as an hydraulic engineer. He is given general supervision of all the measurements and records of appropriation of waters of the State, and of all surveys and engineering work in which the State may be interested. He may employ assistants and purchase supplies necessary. His office is located in the Capitol Building at Salem. On or before November 30, of the year preceding the regular session of the legislature, he must give a full report of the work of his office, with such recommendations for legislation as he may deem advisable. He must, before entering upon the duties of his office, give a bond in the sum of $5000, and take an oath of office. The records of his office are public and are open to inspection. A schedule of fees of his office is also provided.[4]

*Division Superintendents.*—The division superintendents of each water division are elected by the voters of the respective divisions, to hold office for a term of four years at a salary of $2,400 per annum. Each of said superintendents shall have knowledge and experience relative to the irrigation law and its administration, and measurement of flowing water, evaporation, seepage, and common alkalies, drainage, and the hydrographic features of the water division in which he may reside. He shall have the general control of the water masters, execute the laws relative to the distribution of water, and perform such other functions as may be assigned to him. He may also make such reasonable regulations as to the distribution of waters as are not inconsistent with law. An appeal may be had from his decisions to the board of control.[5]

*Water Masters.*—The board of control shall divide each water division into water districts, and over each district appoint a water master. It is made the duty of the water master to divide the waters of the streams among the several ditches and reservoirs entitled to the same. He shall take all necessary steps to prevent waste of the water. He has the power to employ assistants in case of

[3] L. O. L., Secs. 6604-6608.

[4] L. O. L., Secs. 6598-6602. Amended as respects to the salary, Laws, 1911, p. 422.

[5] L. O. L., Secs. 6609-6614.

emergency. He shall not begin his work except upon written notice given him by one or more water users, and his compensation is $5 per day for the actual time employed. He is given the power of arrest.[6]

**§ 1979. Appropriations of water prior to Act of 1909.**—It will be noticed in the preceding section,[1] the rights to the appropriations of water under existing laws prior to the enactment of the Water Code of 1909 [2] were preserved. It therefore follows that there are two sets of laws governing the appropriations of water in the State of Oregon: First, those relating to appropriations made prior to the time that the Water Code went into effect; and, second, those governing appropriations made after it went into effect. As there are many existing rights acquired under the old laws, these laws are still preserved in the statute. It is necessary, therefore, that we give a brief abstract of the same.

By the Act of 1905 [3] it was provided that any person, association, or corporation intending to acquire the right to the beneficial use of any waters for the reclamation of arid lands, shall post in a conspicuous place a notice containing the name of the applicant and the source of water supply, the beneficial use to which the water is to be applied, the exact date of posting, and shall within fifteen days thereafter file in the office of the clerk of the proper county a duplicate of such notice, and shall also file a certified copy of the same with the State engineer, which copy shall be accompanied by such information, maps, field notes, plans, and specifications as may be necessary to show the method of construction.[4] The notice of appropriation must be posted, and a copy of the same filed for record in the office of the county clerk.[5] Such corporation is then given the right to condemn lands for its right of way.[6] It was also provided that the work must begin within six months of the posting of the notice and must be prosecuted without intermission until completed; all existing appropriations must be respected; ditches and

6 L. O. L., Secs. 6615-6623.

1 See Sec. 1978.

2 Laws, 1909, Chap. 216.

3 L. O. L., Sec. 6625; Laws, 1905, Chap. 228, p. 401.

4 L. O. L., Sec. 6625.

It must be noted that the above was superseded as to future appropriations by the Act of 1909, L. O. L., Secs. 6624, 6626.

5 L. O. L., Secs. 6528, 6529; Laws, 1891, as amended.

6 L. O. L., Secs. 6530, 6531; Laws, 1891, as amended.

feeders may be extended; the shortest possible route must be selected; a second corporation may use the same ditch; natural depressions in the earth may be used for a ditch; headgates must be maintained; the owner is liable for all damages for injuries sustained; bridges must be constructed at road crossings; embankments must be maintained; right of way for distributing ditches may be acquired; a lien on crops is given the company for the water furnished for irrigation; ditches are declared to be real property; the right to appropriate the water may be lost by abandonment; wilfully breaking or opening a gate or embankment is made a misdemeanor; all persons interested are to be made parties to any suit to adjudicate water rights; the right of way over State lands was granted, and that the legislature should have the power to fix the water rates, or to provide for commissioners for that purpose.[7]

As to the appropriation of water for mining and electrical power, the right is given to all persons, companies, and corporations, to appropriate waters for those purposes.[8] And, in general, the same rights were given, and subject to the same liabilities, as stated above, where the appropriation was for general purposes and for irrigation.[9]

By the special Act of 1901,[10] the right was given the board of public building commissioners to appropriate water to provide for the supplying of State institutions with water and water power.[11] The right to the use of the water might also be acquired by purchase or by condemnation proceedings. And for this purpose all actions must be brought in the name of the State.[12]

**§ 1980. Appropriation of water in pursuance of Act of 1909.**—According to the Water Code of 1909 [1] water can thereafter be appropriated in the State of Oregon in the following manner: [2]

7 L. O. L., Sec. 6533-6550; Act of 1891, as amended.

8 L. O. L., Sec. 6552.

See, also, Grande Ronde Elec. Co. v. Drake, 46 Ore. 243, 78 Pac. Rep. 1031; McMinnville v. Howenstein, 56 Ore. 451, 109 Pac. Rep. 81.

9 L. O. L., Secs. 6553-6574; Act of 1899, as amended.

10 Laws, 1901, p. 307.

11 L. O. L., Sec. 6581.

See, also, Salem Mills Co. v. Lord, 42 Ore. 82, 69 Pac. Rep. 1033, 70 Pac. Rep. 832.

12 L. O. L., Secs. 6582-6587; Act of 1901, as amended.

1 L. O. L., Secs. 6624-6634; Laws, 1909, Chap. 216, p. 332, Secs. 45-54.

2 For the appropriation of water according to laws existing prior to the Act of 1909, see the preceding section, No. 1979.

"Any person, association, or corporation hereafter intending to acquire the right to the beneficial use of any waters shall, before commencing the construction, enlargement, or extension of any ditch, canal, or other distributing or controlling works, or performing any work in connection with said construction, or proposed appropriation, make an application to the State engineer for a permit to make such appropriation. Any person who shall wilfully divert or use water to the detriment of others without compliance with law, shall be deemed guilty of a misdemeanor. The possession or use of water, except when a right of use is acquired in accordance with law, shall be *prima facie* evidence of the guilt of the person using it." [3]

As to the filing and form of the application the Wyoming statute is largely followed.[4] And it is made the duty of the State engineer to approve all applications made in proper form which contemplate the application of water to a beneficial use, "but when the proposed use conflicts with determined rights, or is a menace to the safety and welfare of the public, the application shall be referred to the board of control for consideration. It shall be the duty of the board to enter an order directing the refusal of such application, if, after full hearing, the public interest demands." [5] If the application is approved, the applicant may proceed with the construction of his works. Work must begin within one year thereafter and be completed within five years. The procedure for a reservoir permit is the same. When the appropriation is perfected the board of control shall issue a certificate. Certificates for power purposes shall be limited to forty years. The right acquired by an appropriation shall date from the filing of the application.[6]

[6] L. O. L., Secs. 6628-6634.

See, also, Cookinham v. Lewis, *supra*.

An applicant may appeal to the board of control from any decisions of the State engineer.[7]

By the Act of 1911 [8] no permit for the appropriation of water shall be denied because of the fact that the point of diversion described in the application may be situated in some other State, but where the place of intended use is in the State of Oregon: Provided, however, that a permit may be denied, where the point of diversion is in the State of Oregon, but the place of beneficial use is in some other State, unless under the laws of such State water may be lawfully diverted within such State for beneficial use in the State of Oregon.

§ 1981. **Rights to waste and seepage water.**—All ditches constructed for the purpose of utilizing waste, spring, or seepage waters of the State shall be governed by the same laws relating to priority of right as those ditches constructed for the purpose of utilizing waters of running streams: Provided, that the person upon whose lands the seepage or spring water first arises shall have the right to the use of such waters.[1]

§ 1982. **The appropriation of water for power purposes—License fees.**—Owing to the many opportunities in the State of Oregon for the development of power, the legislature has enacted special laws governing the appropriation of water for that purpose. And, in addition to the usual conditions, the legislature has wisely provided that the use of the water for this purpose is also conditioned upon the payment to the State of certain graduated fees, according to the amount of power developed.

By the Act of 1909 [1] it is provided that every person, firm, or corporation might appropriate water for the purpose of the development of power, upon the payment annually in advance of certain fees to the State, as therein specified. "For the purpose of this

[8] Laws, 1911, Chap. 224, p. 404.

[1] L. O. L., Sec. 6673; Laws, 1893, p. 150, Sec. 1.

See, also, Brosnan v. Harris, 39 Ore. 148, 65 Pac. Rep. 867, 54 L. R. A. 628, 87 Am. St. Rep. 649; Morrison v. Officer, 48 Ore. 569, 87 Pac. Rep. 896; Cookinham v. Lewis, 58 Ore. 484, 114 Pac. Rep. 88; Borman v. Blackmon, —— Ore. ——, 118 Pac. Rep. 848.

[1] L. O. L., Secs. 6575-6580; Laws, 1909, Chap. 221, p. 370, Secs. 1-6.

Act, a horsepower is hereby defined to be 550 pounds of water per second of time for each foot of available fall."[2]

And by the Act of 1911[3] it was provided that every person, firm, corporation, or association, claiming the right to the use of water for power development, where said water was applied to the development or generation of power, and the power generated thereby prior to the 22d day of May, 1909, shall, on or before the first day of January, 1912, and on or before the first day of January of each year thereafter, pay to the State in advance "an annual license fee" based upon the theoretical water horsepower claimed under each and every separate claim to water, graduated as follows, to wit: Ten cents for each and every theoretical water horsepower up to 100, inclusive; 5 cents for each and every theoretical water horsepower in excess of 100, up to and including 1,000; and 1 cent for each in excess of 1,000. Provided, however, upon filing the statement as herein provided, the United States, or the State, or any municipal corporation, to any extent, or any other claimant to the right to the use of water for the generation of 25 theoretical horsepower, or less, shall be exempted from the payment of all fees herein provided. The fees provided shall be paid to the State engineer, and shall be accompanied by a written statement showing the extent of such claim. The amount of theoretical water horsepower upon which fees shall be paid, shall be computed by multiplying the maximum amount of the water claimed, expressed in cubic feet per second, by the average total fall utilized, expressed in feet, and dividing the product by 8.8. The filing of a claim to water in excess of the amount to which the claimant is legally entitled shall not operate to vest in such claimant any right to the use of such excess water, nor shall the payment of the annual license fees operate to vest in any claimant any right to the use of such water beyond the amount to which the claimant is legally entitled. The filing of such claim to water shall be conclusive evidence as to the abandonment by the claimant of all rights to water in excess of the claim as filed.[4]

Upon the completion of the appropriation, as provided by law, the appropriator for this purpose shall own and enjoy all the uses thereof, so long as he pays the annual license fees therefor, for a term not exceeding forty years from the date of the appropriation,

[2] L. O. L., Sec. 6576.
[3] Laws, 1911, Chap. 236, p. 418.
[4] Laws, 1911, Chap. 236, p. 418, Secs. 1-4.

and shall have a preference right to reappropriate such water, under such conditions as may be prescribed by law at the expiration of such term of years, provided that all fees have been paid.[5]

Should any claimant fail or neglect to file such statement within the time specified, or fail or neglect to pay such fees within the time specified, the fees due and payable shall be the amount specified above, increased by 25 per cent, and the State shall have a preference lien therefor, together with interest at the rate of 10 per cent per annum from the date of delinquency, upon the property of the claimant, and upon notice from the State engineer, the attorney general shall proceed to foreclose the lien and collect the amount due, in the same manner as other liens on real property are foreclosed.[6]

By an Act of 1911 [7] all license fees paid as above provided are created a "survey fund," in the hands of the State treasurer to be used by the State engineer in making surveys and investigations looking to the gathering of data concerning topographic features, stream flow, and water power within the State.

§ 1983. **Corporations and companies.**—Upon the subject of the appropriation of water for general uses and irrigation by corporations, it is provided:

"A corporation organized for the construction and maintenance of a ditch or canal or flume for general irrigation purposes, and other purposes above described,[1] may appropriate and divert water from its natural bed or channel and condemn a right of way for its ditch or canal or flume, and may condemn the rights of riparian proprietors upon the lake or stream upon which the appropriation is made, upon complying with the terms of this Act." [2] Such corporation is given the right to enter private lands and make surveys.[3]

A corporation which is organized merely to facilitate distribution of water among individual proprietors, though they do not surrender their rights to it, is yet in such a privity of estate with them as to enable it to defend in their behalf in litigation affecting their rights to the use of water.[4]

5 L. O. L., Sec. 6578.

6 Laws, 1911, Chap. 236, p. 418, Sec. 2.

7 Laws, 1911, Chap. 237, p. 419.

1 For these purposes, see L. O. L., Sec. 6525.

2 L. O. L., Secs. 6526, 6532; Act of 1891, as subsequently amended.

3 L. O. L., Sec. 6527; Act of 1891, as amended.

4 Caviness v. La Grande Irr. Co., —— Ore. ——, 119 Pac. Rep. 731.

§ 1984. **Water rates.**—By the Act of 1891, it was provided that "this Act may at any time be amended by the legislative assembly and commissioners for the management of water rights and the use of water may be appointed and rates for the use of water may be fixed by the legislative assembly or by such commissioners; but rates shall not be fixed lower than will allow the net profits of any ditch or canal or flume or system thereof to equal the prevailing legal rate of interest on the amount of money actually paid in and employed in the construction and operation of said ditch or canal or flume or system thereof." [1]

By the Act of 1911 [2] the Railroad Commission of Oregon was vested with the power and jurisdiction to supervise and regulate every public utility of the State, and the charges made by any public utility for heat, light, water, or power produced, transmitted, or furnished. It was provided that such charges should be reasonable and just and every unjust or unreasonable charge for such service was prohibited, and declared unlawful.

Every public utility shall file with the commission within a time to be fixed by the commissioner a schedule which shall be open to public inspection, showing rates, tolls, and charges, which it has established, and which are in force at the time, for any service performed by it within the State. All rules and regulations that in any manner affect the rates charged or to be charged for any service must be filed with the schedule.

A copy of so much of said schedule as the commission shall deem necessary for the use of the public shall be printed in plain type and kept on file in every office of such public utility where payments are made by consumers so as to be readily accessible and conveniently inspected. Copies of all new schedules must be filed in the office of the utility where payment is received ten days prior to their taking effect. It is made unlawful to collect any greater rate than provided in the schedule.

Upon complaint made against any public utility by any mercantile, agricultural, or manufacturing system, or by any political or municipal organization, or by three persons, firms, or associations, that any or all rates are in any respect unreasonable or unjustly discriminatory or that any regulations, measurements, practice, or

1 L. O. L., Sec. 6550.

2 Laws, 1911, Chap. 279, p. 483.

act, whatsoever, affecting or relating to the production, transmission, or furnishing of, among other things, water or any service connected therewith in any respect unreasonable, insufficient, or unjustly discriminatory, the commission shall proceed with or without notice to make such investigations as it may deem necessary, but no order affecting the rates shall be entered by the commission without a formal hearing. The hearing and procedure is then provided for upon which the commission must make the order fixing such rates.

§ 1985. **Rights of way and water rights—Condemnation.**—Rights of way are given over all State lands for the purpose of constructing ditches, canals, or other works; and the lands afterward sold over which the same has been previously granted, shall be sold subject to such rights of way.[1]

For the exercise of the right of eminent domain it is also provided:

"The United States, the State, or any person, firm, or corporation, shall have the right of way across and upon public, private, and corporate lands, or other rights of way, for the construction, maintenance, repair, and use of all necessary reservoirs, dams, water gates, canals, ditches, flumes, tunnels, or other means of securing, storing, and conveying water for irrigation and drainage, or any other beneficial purpose, upon payment of just compensation therefor." Rights of way are also granted through works already constructed.[2] Such rights of way may be acquired in the manner provided by law for the taking of private property for public use.

By the right of eminent domain a corporation organized for the purpose of the construction of any ditch or flume for conducting water for domestic or irrigation purposes, or for the selling of the same to the public, or for the manufacture and sale of electricity, may condemn the necessary right of way over private property.[3] Special proceedings are provided therefor.[4]

Relative to the condemnation of water rights, it is provided that whenever it is necessary that the State of Oregon shall require any

[3] L. O. L., Secs. 6838, 6839.

See, also, Bridal Veil Lum. Co. v. Johnson, 30 Ore. 210, 46 Pac. Rep. 790.

[4] L. O. L., Secs. 6838-6873.

real property, water, water courses, and water and riparian rights, or any right or interest therein for any public use, the necessity for such acquisition to be decided and determined in the first instance by the State board of commissioners, trustees, or other State board having direction of the State institution or department for which the same is desired, or by the State Land Board, said board is authorized to institute condemnation proceedings for such property.[5]

**§ 1986. The determination of existing water rights.**—Under the Water Code of Oregon of 1909 [1] the Wyoming procedure is largely followed.[2] There are, however, some changes.

Such a determination must be instituted by a petition to the board of control, signed by one or more water users upon any stream. In case suit is brought in the circuit court for the determination of rights, the case may, in the discretion of the court, be transferred to the board of control.[3] Notice of the intended proceedings must be published and notice to the individual claimants to the water must be mailed to them 30 days before the hearing. A statement of each claimant under oath must be filed with the division superintendent, setting forth his claim to the water and the purpose for which it is used.[4] The division superintendent is to take the testimony, unless

5 L. O. L., Sec 6872.

As to the right of incorporated cities and towns to appropriate land and water rights, see L. O. L., Sec. 6874, as amended by Acts filed Feb. 18 and 21, 1911, Laws, 1911, Chaps. 104, 145.

1 L. O. L., Secs. 6635-6679; Laws, 1909, Chap. 216, p. 321, Secs. 11-35.

2 For the determination of rights in Wyoming, see Secs. 2111-2114.

For the determination of rights by boards, see Chap. 80, Secs. 1585-1595.

3 L. O. L., Sec. 6635.

"The intent of the Act seems to be to place the control of irrigating water under the jurisdiction of the board of control as rapidly as rights are determined by it, and become a matter of record in its office. When the board convenes to determine such rights, prior decrees, made independent of action by the board, are conclusive upon it as between the parties to such decrees, and thereafter the rights established thereby may be enforced by the water master, the same as though they had been originally determined by the board. But, in the absence of such determination in accordance with the water code, such rights must be enforced by the Court making the decree." Wattles v. Baker County, 59 Ore. 255, 117 Pac. Rep. 417.

Decree affects parties only. Carnes v. Dalton, 56 Ore. 596, 110 Pac. Rep. 170, 1 Water and Min. Cas. Ann. 207.

For extent of riparian rights, see State *ex rel.* Olding v. Stampfly, —— Ore. ——, 25 Pac. Rep. 148.

4 L. O. L., Secs. 6636-6639.

he is interested, in which case it may be taken by some other member of the board of control. The fees as specified must be paid by each claimant. Notice must be given by mail to each claimant of the completion of the taking of testimony.[5]

Any one claiming any interest in the stream may institute a contest against the claims of any other claimant or claimants. After notice, a hearing of such contest must be had before the division superintendent.[6]

The evidence in the original hearing, and the evidence taken in all contests, must be transmitted to the board of control. It is then made the duty of the State engineer to make an examination of the stream and ditches, canals, and other works, and of the lands, and to make a map showing the same. As soon as practicable after the compilation of such data, it is made the duty of the board of control to make an order determining and establishing the several rights to the waters of such stream, and to issue certificates for the same.

The Oregon law differs from that of Wyoming, in this: Instead of claimants being given a right of appeal from orders of the board of control to the court, the court in Oregon must in each instance confirm the order of the board or make a new adjudication. Upon the filing of the evidence with the clerk of the circuit court of the proper county, the court must fix a time at which the determination shall be heard in said court. From and after the filing of the evidence and order of determination in the circuit court, the proceedings are as nearly as may be like those in a suit of equity. Within 30 days from such filing, any party may file exceptions to the determination by the board. If no exceptions are filed, the court on the day set shall make a decree affirming the determination of the board. All parties may be heard by counsel upon the considerations of the exceptions. The court may, if necessary, remand the case for such further evidence to be taken by the superintendent as it may direct. After the hearing the court shall enter a decree affirming or modifying the order of the board of control. Appeals may be had to the Supreme Court as in other cases.[7]

It is made the duty of all claimants to present their claims, otherwise they "shall be barred and estopped from subsequently asserting any right theretofore acquired upon the stream or other body

[5] L. O. L., Secs. 6640-6642.
[6] L. O. L., Secs. 6643-6645.
[7] L. O. L., Secs. 6648, 6650.

of water embraced in such proceedings, and shall be held to have forfeited all rights to the use of said water theretofore claimed."[8] The disbursements made in litigating the rights in such actions shall be taxed by the court as in other equity cases.[9]

"Such decree shall in every case declare as to the water right adjudged to each party, whether riparian or by appropriation, the extent, the priority, amount, purpose, place of use, and, as to water used for irrigation, the specific tracts of land to which it shall be appurtenant, together with such other conditions as may be necessary to define the right and its priority." A certified copy of such decree shall be filed in the office of the State engineer.[10]

"The determination of the board of control as confirmed or modified as provided in this Act in proceedings shall be conclusive as to all prior rights and the rights of all existing claimants upon the stream or other body of water lawfully embraced in the determination."[11]

"In suits for injunction affecting the use of water from streams upon which the rights to water have been determined, no restraining order shall be granted before hearing had after at least three days' notice thereof served upon all persons defendant. All suits for injunction involving the use of water shall be heard, either in term time or during vacation, not later than fifteen days after issues joined, unless for good cause shown further time be allowed."[12]

**§ 1987. The protection of highways.**—It is made the duty of all road supervisors to ascertain whether or not there is any water running or flowing in or upon any county road, as overflow or seepage from any irrigation or other ditch. If such is found, he must notify the owner or user of such ditch to, within six hours from the hour of service of such notice, have the water diverted from such road and to keep the water from again flowing or seeping upon such road. If the owners fail to remove such water, it is the duty of the supervisor to remove the same and to take such steps as will prevent the water from coming upon such road. The expense for doing this work is made a lien upon the ditches and lands of the owner,

8 L. O. L., Sec. 6656.

12 L. O. L., Sec. 6667.

prior and superior to all other liens except taxes. This lien may be foreclosed.[1]

Bridges and embankments must also be constructed and maintained by the owners of ditches and canals.[2]

§ 1988. **Mechanics' liens.**—Every person who shall perform any labor upon or furnish any material for the working or development of any mine, and who shall do work or furnish material for any flume, ditch, or pipe line, in connection with the working or development of any mine, or do any freighting therefor, or furnish any provisions, materials, or supplies therefor, is given a lien upon such mine, flume, ditch, or pipe line, and all structures used in connection with said mine. The lien claimed must be filed with the county clerk of the proper county within 60 days after he has ceased to labor thereon or to furnish such material. The lien may be foreclosed as in other cases.[1]

§ 1989. **The distribution of water under the code of 1909.**—The owners of ditches and canals must construct and maintain to the satisfaction of the division superintendent substantial headgates and measuring devices.[1] The State engineer has the authority to inspect all works and order such alterations as he may deem necessary for the security of the work or the safety of any person residing on or owning lands in the vicinity of such works.[2] And the inspection of such works may be required by any such persons.[3]

The use of water from reservoirs is regulated similar to that of Wyoming and Idaho, by the water master closing all headgates on the streams of those not entitled to the water, as will enable those having the right to the water to secure the volume to which they are entitled.[4] All joint owners of works are liable for their proportionate share of the work necessary for the proper maintenance and operation of the same, and the one, who after notice, does such work has a lien against the interest of the person or persons in default

1 L. O. L., Secs. 6427-6431.
2 L. O. L., Secs. 6541, 6542.
1 L. O. L., Secs. 7444, 7445.

4 L. O. L., Sec. 6663.

and may enforce the same by foreclosure.[5] The water master may take charge of partnership ditches in cases of dispute and distribute the water.[6]

Water for irrigation purposes shall be appurtenant to the land upon which it is used, but said right may be severed from said land and simultaneously transferred to and become appurtenant to other land without losing priority, on approval of an application of the owner by the board of control.[7]

Where there is not sufficient water for all, a preference right is given to those using the water for domestic purposes.[8]

"Said water master shall, as near as may be, divide, regulate, and control the use of the water of all streams within his district by such closing or partially closing of the headgates as will prevent the waste of water, or its use in excess of the volume to which the owner of the right is lawfully entitled, and any person who may be injured by the action of any water master shall have the right to appeal to the circuit court for an injunction. Such injunction shall only be issued in case it can be shown at the hearing that the water master has failed to carry into effect the order of the board of control or decrees of the court determining the existing rights to the use of water."[9]

**§ 1990. The location of artesian wells.**—The opportunity of securing artesian wells in the State of Oregon called for the enactment of a special law upon that subject.[1]

Whenever the majority of the owners of real estate representing also the majority of the number of acres of land of any proposed district in any county of the State desire to bore for the purpose of securing artesian water, they shall present a petition to the county court asking the court to create a district for that purpose. The court is then authorized to order an election for that purpose. And if it be found that a majority of the votes cast at such election are in

1 See L. O. L., Secs. 6232-6244.

favor of a tax for boring for artesian water, the county court will then place in the next general levy the number of mills necessary to create such tax upon the assessed value of the property within the district.

After 50 per cent of the special tax has been paid into the county treasury the county court shall call into consultation the State engineer, who, together with the county court and county commissioners, shall proceed to locate the well in the proposed district, which shall be ascertained in the following manner: 1. Centralization of location; 2. Location with reference to altitude and the possibilities of its serving the greatest number of people within the district; 3. Location relative to indications for securing water; 4. After ten days' notice by posting in three conspicuous places within the district, bids from the various property owners as a bonus for location, provided the well be a success; 5. Location with reference to the bids for the well if it is not artesian, provided it furnishes a sufficient supply of water for pumping for the land upon which it is located. With reference to the above, contracts may be let to sink such a well.[2]

Provisions are made for the reservation of water for public use, and for the distribution of the water, which latter must be for the best interests of the whole district.[3]

For the purpose of the Act, an artesian well is defined to be "any artificial hole made in the ground not less than six inches in diameter at the bottom, through which water naturally flows from subterranean sources to the surface of the ground for any length of time."[4]

§ 1991. **The floating of logs and timber.**—Upon the application of any individual, association, or corporation the county court of any county in the State may declare all or any portion of any river or stream within the county, which is not in fact navigable for commercial purposes, to be a public highway for floating and transporting logs, timber, and lumber, and the court may also direct the widening, deepening, straightening, removing obstructions from, building of dams and booms in, and otherwise improving such stream as may be necessary for such purpose.[1]

4 L. O. L., Sec. 6241.

1 L. O. L., Sec. 6453.
See, also, Hood River Lumber Co., 35 Ore. 498, 57 Pac. Rep. 1017.

Rights of way may be acquired over private lands, either by contract or by special condemnation proceedings.[2]

The right to the use of such streams may be leased to parties desiring to use the same for the purposes named, the tolls for the same being fixed by the court.[3]

§ 1992. **The Carey Act in Oregon.**—The provisions of the Carey Act apply to the State of Oregon and were accepted by the legislature of that State. The selection, management, and disposal of the land is vested in the desert land board, consisting of the Governor, Secretary of State, treasurer, attorney general and the State engineer.[1] The usual provisions are made for the application for the withdrawal of lands and for the contracts with the applicants, and for the lien of the contracting company for the reclamation of the land.[2] "If the application is made in proper form, and it is made to appear that the proposed plan is feasible, that the applicant is financially able to complete the work, and that its completion will be to the best interests of the State, then it shall be the duty of the board, at the expense and cost of the applicant, to make proper application for the selection and withdrawal of the lands included in such application."[3]

Upon the subject of the transfer of the control of the irrigation system there is a somewhat unusual provision. It is provided that for such time as specified in the contract and not to exceed ten years from the date thereof the control and management of the reclamation works shall be vested in the person, association, or corporation having contract with the State. At the expiration of such time the clear and unincumbered title to the reclamation works and all franchises thereunto pertaining, also the control and management thereof, shall pass to the purchasers of water rights from the reclamation works in the manner to be prescribed in the contract, the contractor retaining an interest in such works proportional to the amount of water rights unsold.[4]

No land shall be open to entry and no water rights shall be sold

2 L. O. L., Secs. 6454, 6455.
3 L. O. L., Secs. 6455-6457.
1 L. O. L., Secs. 3860-3863.
For full discussion of the Carey Act, see Chap. 67, Secs. 1312-1330.

3 L. O. L., Sec. 3864.
4 L. O. L., Sec. 3867.

until the construction of the works is sufficiently advanced to insure a water supply.[5] Any citizen of the United States over the age of 21 years may make application for land. Each application must be accompanied with a water contract. Each application shall be accompanied by a payment of not less than $1 per acre included in the application, which payment shall be made by the contractor out of the first payment by the applicant. Upon filing with the board a release of the construction lien, accompanied by satisfactory proof of reclamation, cultivation, and settlement, it is made the duty of the board to deed to the applicant, or to his assignee, the land.[6]

All moneys received by the board constitute a "reclamation fund," to be used in securing the reclamation of other lands.[7]

§ 1993. **Irrigation district law in Oregon.**—Oregon has also adopted the irrigation district law, following that of California with the more recent amendments.[1] The proceedings for the organization of such a district is instituted upon the petition of 50, or a majority of the holders of lands susceptible of irrigation from a common source of supply, and do not differ materially from the proceedings for the organization of such districts in other States.[2] The board is also given "the right to acquire, either by lease, purchase, condemnation, or other legal means, all lands and waters and water rights, rights of way, and other property, including works constructed and being constructed by private owners," which may be necessary.[3] The board is authorized to enter into contracts with the United States, for the construction of the necessary works, under the provisions of the National Reclamation Act.[4]

The board is also authorized to borrow money and to issue bonds of the district covering the same. All plans, surveys, and estimates must be submitted to the State engineer, who shall make and file a report upon the same with the board, "which report shall contain

such matters as in the judgment of the State engineer may be reasonably necessary."[5]

Assessments may be levied and collected sufficient to pay all charges and expenses: Provided, "that in no case shall any land be taken for irrigation purposes under this Act which from any natural causes can not be irrigated or which is incapable of cultivation.[6] In no event shall the board of directors incur an indebtedness in excess of $200 per acre in the aggregate of the land situated in the district, and any debt or liability incurred in excess of such express provisions shall be and remain absolutely void," except the sum of $5000, which is allowed for the organization of the district.[7] The boundaries of a district may be changed in the usual manner.[8] The circuit court is given jurisdiction to confirm all proceedings.

The law has been declared to be constitutional by the Supreme Court of the State.[9]

**§ 1994. Provisions in aid of the National Reclamation Act.**—Whenever the proper officers of the United States, as authorized by the National Reclamation Act,[1] shall file in the office of the State engineer a written notice that the United States intends to utilize certain specified waters, such waters shall not be subject to further appropriation under the laws of the State, but shall be deemed appropriated by the United States: Provided, that within three years from the date of such notice final plans of the proposed works by the United States shall be filed in the office of the State engineer, and that within four years from said notice the United States shall authorize the construction of such proposed works. Such water rights may be adjudicated.

The State engineer is authorized to make topographic and hydrographic surveys in co-operation with the officers of the United States Government. No lands belonging to the State within the areas to be irrigated from such works, shall thereafter be sold except

in conformity with the classification of farm units by the United States. The right of way for the above purposes is given over State lands.[2] The right of condemnation of rights of way for the necessary works is granted, as is the case with others.[3]

§ 1995. **The pollution of waters.**—Any person who shall put any sewage, drainage, or refuse, or polluting matter, as either by itself or in connection with other matter which will corrupt or impair the quality of any well, spring, brook, creek, branch, or pond of water, which is used or may be used for domestic purposes or for livestock, shall be deemed guilty of a misdemeanor, and punishable by fine or imprisonment, or both.[1] The pollution of any waters from which any city or municipal corporation of any adjoining State obtains its water supply is made a misdemeanor and punishable by a fine in any sum not exceeding $500.[2] Any person who puts a carcass of any dead animal into any river, creek, or pond is punishable by a fine of not less than $2 nor more than $25.[3] Any one exploding any giant powder, dynamite, or other explosives, or casting any gas, lime, *cocculus indicus,* or any other substance poisonous to fish, is punishable by a fine of not less than $200 or imprisonment in the county jail not less than 30 days nor more than one year.[4] The casting of sawdust, planer shavings, or waste of this nature is punishable by a fine of not less than $50 nor more than $500 for each and every offense.[5]

§ 1996. **Criminal statutes.**—It is made a misdemeanor for any owner of any dam or other obstruction in any stream to fail to pro-

vide a passageway for fish.[1] It is also made a misdemeanor for any owner, or other person in charge of any mill race, irrigating ditch, or canal to fail to place at the intake thereof a wire netting so as to prevent the passage of fish into the same.[2]

Any person wilfully injuring or destroying any water ditch, canal, or other works of this nature is punishable by a fine of not less than $10 nor more than $500.[3]

Any person who shall wilfully divert or use water to the detriment of others, without compliance with law, shall be deemed guilty of a misdemeanor.[4] The willful waste of water to the detriment of another is a misdemeanor. Also the unlawful obstructing of any works of another.[5]

§ 1997. **Riparian rights in Oregon.**—Prior to the decision of the Supreme Court of Oregon in the case of Hough v. Porter, on January 5, 1909,[1] the strict rule of the common law of riparian rights as to the use of the waters of the natural streams was adhered to by the decisions of the courts.[2] By that decision, however, the common law doctrine of the right of a riparian proprietor to the undimin-

ished flow of a stream without use was utterly repudiated, and his rights limited to actual use of the water, sufficient for his domestic demands and to water his stock and to irrigate his garden. Also by the United States Circuit Court for Oregon, it was said in a recent case: "The modern tendency is to make the beneficial use of water the test of the right, and unless it is put to a beneficial use by a riparian proprietor or is of sole substantial benefit to him, he ought not to be allowed to prevent its use by others."[3] But the subject was not allowed to remain at rest here simply by court decisions. By the Water Code of 1909[4] the right to the water of natural streams by riparian proprietors was limited to the quantity actually applied to a beneficial use within the time fixed by the board of control and further that the extent of such right to the use of the water must be adjudicated as provided by the Act.[5] In view of the above it may be said that the State of Oregon has by court decision and by statutory law abrogated the common law of riparian rights as to the use of the waters of natural streams, making the right to use such waters by all dependent upon the actual application of all the water claimed to some beneficial use or purpose.

# CHAPTER 98.

## PHILIPPINE ISLANDS.

§ 1998. Particular features of the islands.
§ 1999. Irrigation on the islands.
§ 2000. Criticism of the Philippine laws.
§ 2001. The right to appropriate waters—Statute of the United States.
§ 2002. The title to waters—Spanish-Philippine law.
§ 2003. The use of public waters—Spanish-Philippine law.
§ 2004. Subterranean waters—Spanish-Philippine law.
§ 2005. Rights of way—United States statute.
§ 2006. Rights of way and condemnation therefor—Spanish-Philippine law.
§ 2007. General provisions—Spanish-Philippine law—Defensive works—Expenses of construction—Eminent domain of waters—Sale.
§ 2008. Easements with regard to waters—Spanish-Philippine law.
§ 2009. Riparian rights in the Philippines.

**§ 1998. Particular features of the islands.**—The Philippine Islands constitute a portion of the most recent acquisition of territory by the United States. As we have seen in a previous portion of this work, these islands were acquired from Spain as the result of the treaty which ended the Spanish-American War.[1]

The Islands consist of an archipelago in the southeast of Asia, extending from 4° 40′ to 20° north latitude, and from 116° 40′ to 126° 30′ east longitude. On the west and northwest they are separated from China and the Indo-Chinese Peninsula by the China Sea; toward the east lies the Pacific; on the north a number of smaller islands stretch out toward Formosa. The number of islands of the archipelago is something in excess of 1400. Before the treaty referred to above, for three centuries, the greater part of the territory had been nominally in Spanish possession, although some of the tribes of the interior had never been conquered. All of the islands may be described in general as mountainous and hilly. Volcanic forces have had a great share in shaping the archipelago, and a large number of mountains bear the stamp of their former activity.

The northern islands lie in the region of typhoons. Three seasons are usually recognized—a cold, a hot, and a wet. The cold extends from November to February or March; the hot lasts from March to

1 See Sec. 398.

June, and the heat becomes very oppressive before the beginning of the southerly monsoon; the wet season is usually ushered in by heavy rains, locally known as "collas." During July, August, September, and October the rain comes down in torrents, and large tracts of the lower country are flooded.

The temperature of the cold season ranges from 72° to 86° F., the hot season from 82° to 88° F., and the wet season from 75° to 87° F.

§ 1999. **Irrigation on the islands.**—For many years irrigation has been practiced in the Philippine Islands under the Spanish systems and laws. When the United States acquired the territory it very soon began an investigation of the subject and many new features, both upon the practical side of the question and the laws, have been adopted. Many irrigation projects have been instituted and consummated by private capitalists and are now in active operation. The laws are still somewhat unsatisfactory. The Philippine Commission seems to be somewhat at variance with the legislative assembly of the Islands, and although the commission has suggested a number of bills tending toward the regulation and control of the waters of the Islands, for irrigation and other useful purposes, as yet no satisfactory law has been enacted.

On the 28th of March, 1910, the Governor General of the Islands submitted to the Philippine legislature the following:

"The last legislature passed a law providing for a continuing annual appropriation of 750,000 pesos for the purposes of irrigation. A division of irrigation has been created in the bureau of public works, a competent engineer placed in charge of this division, and a number of experienced engineers brought to the Islands and set to work making studies on the various projects submitted for consideration. Money has already been allotted for the construction of many of these systems, and the work has begun on more than one.

"It appears, however, that there is no provision of the law providing for the manner of collecting from the people benefited the cost of construction and expense of operation and maintenance of the system as provided under the terms of the law, so that the Islands are being deprived of the benefits of early construction pending the completion of the agreements with property owners to take water and pay for it at the rate fixed by the Government. . . .

"The study of experts on the Islands has also revealed the fact that there is an urgent necessity for a law fixing the terms upon which parties may use the water of rivers passing through or near their estates, and enable the Government to assure property owners who have established irrigation systems, of legal and indisputable rights to the continued use of water, fixing a method by which prior claims shall be recognized and new claims established." [1]

At that assembly a bill was proposed, entitled "An Act to provide a system for the regulation, control, distribution, use, and right of the public waters and for the determination of existing rights thereto within the Philippine Islands and to provide for surveys and for the construction, maintenance, and operation of irrigation projects by the Government of the Philippine Islands and for repayment of the money expended therein."

The bill was based somewhat upon the laws of State control, discussed in a previous chapter.[2] The bill failed of passage for the reason that the assembly could not agree to some of the amendments proposed by the Philippine Commission.

§ 2000. **Criticism of the Philippine laws.**—The laws governing the right to the use of water in the Philippine Islands are based largely upon the civil law, except as the same is modified by the Philippine Civil Code, discussed in subsequent sections of this chapter.[1] Upon the acquisition of jurisdiction by the United States over the Islands, the right to water was made conditional upon its application to some beneficial use. In the meantime the Spanish-Philippine laws are still in full force and effect, except where modified by the Statutes of the United States and by the new Philippine Assembly.[2]

§ 2001. **The right to appropriate waters—Statute of the United States.**—Although there are no provisions as to how waters may be appropriated, the right of appropriation is given by the statutes of the United States applicable to the Philippine Islands.

1 Philippine Legislative Journal, 1910, p. 17.

2 For the laws of State control, see Chap. 68, Secs. 1337-1367.

1 See Secs. 2001-2004.

2 See Secs. 2001-2004.

By the Act of Congress of July 1, 1902, the same being an Act temporarily to provide for the administration of the affairs of civil government in the Philippine Islands,[1] Section 19, it was provided: "That the beneficial use shall be the basis, the measure, and the limit of all rights to water in said Islands, and the Government of said Islands is hereby authorized to make such rules and regulations for the use of water, and to make such reservations of public lands for the protection of the water supply, and for other public purposes not in conflict with the provisions of this Act, as it may deem best for the public good."

By Sections 50 and 51 of the above Act it was also provided:

"Sec. 50. That whenever by priority of possession, rights to the use of water for mining, agricultural, manufacturing, or other purposes have vested and accrued and the same are recognized and acknowledged by the local customs, laws, and the decisions of the courts, the possessors and owners of such vested rights shall be maintained and protected in the same, and the right of way for the construction of ditches and canals for the purposes herein specified is acknowledged and confirmed, but whenever any person, in the construction of any ditch or canal, injures or damages the possession of any settler on the public domain, the party committing such injury or damage shall be liable to the party injured for such injury or damage.

"Sec. 51. That all patents granted shall be subject to any vested and accrued water rights, or rights to ditches and reservoirs used in connection with such water rights as may have been acquired under or recognized by the preceding section."

It will be noticed that the last two sections are but a re-enactment of Sections 2339 and 2340 of the Revised Statutes of the United States, heretofore discussed in previous sections.[2]

§ 2002. **The title to waters—Spanish-Philippine law.**—By the old Spanish laws in force in Cuba, Porto Rico, and the Philippines, governing the subject of waters on those islands, up to the time of

[1] 5 Fed. Stats. Ann., 1905, pp. 718-742; 32 Stat. L. 691-712.

[2] See Revised Statutes of the United States, 1878, Secs. 2339, 2340; 7 Fed. Stats. Ann., 1905, pp. 1090-1096; 14 Stat. L. 253.

the Treaty with Spain after the Spanish-American War, it was provided, upon the subject of the ownership of waters as follows:[1]

"Art. 407. The following are of public ownership:

"1. Rivers and their natural beds.

"2. Continuous or intermittent waters from springs or brooks running in their beds and the said beds.

"3. Waters rising continuously or intermittently in lands of said public ownership.

"4. Lakes and ponds formed by Nature on public lands and their beds.

"5. Rain waters running through ravines or sandy beaches, the beds of which shall also be public property.

"6. Subterranean waters on public lands.

"7. Waters found within the zone of operation of public works, even when they are made by a concessionaire.

"8. Waters flowing continuously or intermittently on estates belonging to private parties, to the State, to Provinces, or to towns, from the moment they leave said estates.

"9. The overflow of fountains, sewers, and public institutions.

"Art. 408. The following are of private ownership:

"1. Waters, either continuous or intermittent, rising on private estates as far as they run through them.

"2. Lakes and ponds and their beds when formed by Nature on said estates.

"3. Subterranean waters found on the same.

"4. Rain waters falling thereon as long as they remain within their boundaries.

"5. The beds of flowing waters, continuous or intermittent, formed by rain water, and those of brooks crossing estates which are not public property.

"In every drain or aqueduct the water, the bed, the sloping bank, and the sideways are considered as an integral part of the estate or building to which the waters are destined. The owners of estate through or along the boundaries of which the aqueduct passes can allege no ownership over it, nor any right to make use of its bed or sideways, unless they base their claim on title deeds specifying the right or the ownership claimed."

[1] Articles 407, 408, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899, as translated.

**§ 2003. The use of public waters—Spanish-Philippine law.**—That the use to public waters may be acquired by individuals is declared in the following language:[1]

"Art. 409. The use of public waters is acquired:

"1. By administrative concession.

"2. By prescription of twenty years.

"The limits of the rights and obligations of these uses shall be those appearing, in the first case, from the terms of the concession; and, in the second, from the manner and form in which the waters have been used.

"Art. 410. Every concession of use of waters is understood without prejudice to third parties.

"Art. 411. The right to make use of public waters is extinguished by the forfeiture of the concession, and by non-user for twenty years."

The regulations as to the use of private waters are in the following terms:[2]

"Art. 412. The owner of an estate containing a spring or source of a brook, continuous or intermittent, may use its waters as far as they run through the estate; but the overflow is public and the use thereof is governed by the special law of waters.

"Art. 413. Private ownership of beds of rain waters does not give a right to make works and constructions which may divert their course to the prejudice of a third party, nor those the destruction of which by the force of floods, may cause such deviation.

"Art. 414. No one may enter private property in search of waters or make use of them without permission from their owners.

"Art. 415. The ownership which the proprietor of an estate has in the waters rising on the same can not prejudice the rights which owners of lower estates may have legally acquired to their use.

"Art. 416. Every owner of an estate has a right to construct on his property receptacles for rain water, provided he does not prejudice the public or a third party thereby."

1 Articles 409-411, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899, as translated.

2 Articles 412-416, Civil Code, *supra*.

§ 2004. **Subterranean waters — Spanish-Philippine law.**—The rights in and to subterranean waters in the Philippine Islands are declared to be as follows:[1]

"Art. 417. Only the owner of an estate or another person with his permission may search for subterranean waters thereon.

"The search for subterranean water on lands of public ownership can only be made with the permission of an administrative authority.

"Art. 418. Artesian waters, according to the special law of waters, belong to the persons who discover the same.

"Art. 419. When the owner of artesian waters abandons the same to their natural course, they become public property."

§ 2005. **Rights of way—United States statute.**—Under Sections 50 and 51 of the Act of Congress of July 1, 1902,[1] it is provided that the right of way for the construction of ditches and canals for the purposes of the use of water as specified by the Act is acknowledged and confirmed, but that whenever any person, in the construction of such works, injures or damages the possession of any settler, the party committing such injury or damage shall be liable to the party injured for such injury or damage, and that all patents thereafter granted shall be subject to the rights to ditches and reservoirs as may have been theretofore acquired or recognized.

In Section 74 of the above Act it is provided that the government of the Philippine Islands may grant franchises, privileges, and concessions, "including the authority to exercise the right of eminent domain for the construction and operation of works of public utility and service, and may authorize said works to be constructed and maintained over and across the public property of the United States, . . . Provided, that no private property shall be taken for any purpose under this section without just compensation paid or tendered therefor, and that such authority to take and occupy land shall not authorize the taking, use, or occupation of any land except such as is required for actual necessary purposes for which the franchise is granted. . . ."

1 Articles 417-419, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899.

1 5 Fed. Stats. Ann., 1905, pp. 718-742; 32 Stat. L. 704.

§ 2006. **Rights of way and condemnation therefor—Spanish-Philippine law.**—Under the Spanish-Philippine law, under which many of the existing rights were acquired, relative to the acquisition of rights of way for ditches and canals, it was provided:[1]

"Art. 557. Whosoever wishes to make use of water, of which he may dispose for an estate belonging to him, has the right to cause it to pass through the intermediate estates, with the obligation of indemnifying their owners, as well as those of the lower estates, upon which the water may filter or descend.

"Art. 558. A person desiring to make use of the right granted in the foregoing article is obliged:

"1. To prove that he has the right to dispose of the water, and that it is sufficient for the use to which it is destined.

"2. To show that the right of way he requests is the most convenient and least onerous to a third person.

"3. To indemnify the owner of the servient estate in the manner prescribed by the laws and regulations.

"Art. 559. The easement of an aqueduct for an object of private interest can not be imposed on buildings nor their yards or dependencies, nor on gardens or orchards already in existence.

"Art. 560. The easement of an aqueduct does not prevent the owner of the servient estate from closing and fencing it, nor from building over the aqueduct in such manner that the latter suffers no damage nor renders impossible necessary repairs and cleanings.

"Art. 561. The easement of an aqueduct for its legal effects shall be considered as continuous and apparent, even though the passage of the water is not continuous, or even if its use depends on the requirements of the dominant estate, or periods consisting of days and hours.

"Art. 562. A person who for the purpose of irrigating his estate or improving it has to construct a stop lock or a sluice gate in a millrace through which it is to receive the water, may demand that the owners of the margins allow their construction, after paying all loss and damage, including those caused by the new easement to the said owners and to the other irrigators.

"Art. 563. The establishment, extent, form, and conditions of the easements of waters to which this section refers shall be gov-

[1] Articles 557-563, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899.

erned by the special laws relating thereto in everything not provided for in this code."

§ 2007. **General provisions—Spanish-Philippine law—Defensive works—Expenses of construction—Eminent domain of waters—Sale.**—Upon the subject of defensive works, the Spanish-Philippine Code provides: [1]

"Art. 420. The owner of an estate on which there are defensive works to check waters, or on which, by reason of the variation of their course, it should be necessary to reconstruct them, is bound, at his option, to make the necessary repairs or constructions or to permit that, without injury to him, they be made by the owners of the estates who suffer or are clearly exposed to suffer damages.

"Art. 421. The provisions contained in the preceding article are applicable to the cases in which it may be necessary to clear an estate from the material, the accumulation, or fall of which may obstruct the course of waters with injury or danger to a third party."

Upon the subject of the contribution by joint owner of the expenses of construction and maintenance of works the following terse clause is provided: [2]

"Art. 422. All owners who participate in the benefits arising from the works, referred to in the two foregoing articles, are obliged to contribute to the cost of their construction in proportion to their interest. Those who by their own fault have caused damage shall be liable for the expenses."

The condemnation of water rights is allowed in the following language: [3]

"Art. 423. The ownership and use of waters belonging to corporations or private parties are subject to the law of eminent domain."

The sale and exchange of water rights is also provided for: [4]

"Art. 424. The provisions of this title shall not prejudice the rights previously acquired nor the private ownership which the owners of waters, drains, fountains, or springs have to use, sell, or exchange them as private property."

1 Articles 420, 421, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899.

2 Art. 422, *supra.*

3 Art. 423, *supra.*

4 Art. 424, *supra.*

§ 2008. **Easements with regard to waters.—Spanish-Philippine law.**—There are certain easements in regard to waters that are provided for in the Spanish-Philippine Code, as follows: [1]

"Art. 552. Lower estates must receive the waters which naturally and without intervention of man descend from the higher estates, as well as the stone and earth which they carry with them.

"Neither may the owner of the lower estate construct works preventing this easement, nor the one of the higher estate works increasing the burden.

"Art. 553. The banks of the rivers, even when they are of private ownership, are subject in their entire length and in their margins for a zone of three meters to the easement of the public use in the general interest of navigation, floatage, fishing, and salvage.

"The estates of adjoining banks of navigable or floatable rivers are furthermore subject to the easement of a towpath for the exclusive service of river navigation and floatage.

"Should it be necessary to occupy, for such purpose, lands of private ownership, the proper indemnity must first be paid.

"Art. 554. If for the diversion or taking of waters from a river or brook or for the use of other continuous or intermittent streams it should be necessary to construct a dam, and the person who is to do so is not the owner of the banks or land upon which to support it, he may establish the easement for abutment of the dam by previously paying proper indemnity.

"Art. 555. Obligatory easement for drawing water and for watering animals may be imposed only for a cause of public utility in favor of a town or village after the proper indemnity.

"Art. 556. The easements for drawing water and for watering animals carry with them the obligation on the servient estates of giving the right of way to the persons and animals to the point where it can be utilized, and the indemnity must include this service." [2]

§ 2009. **Riparian rights in the Philippines.**—The common law of riparian rights never did exist in the Philippine Islands. The law governing the right of those who owned lands upon the banks

1 Articles 552-563, Civil Code in force in Cuba, Porto Rico, and the Philippines, Washington, 1899.

2 See, also, for rights of way and condemnation therefor, Sec. 2006.

of streams or bodies of water was the civil law as modified by the Philippine Civil Code.[1] These lands were subject to certain easements which never were allowed under the common law of England governing riparian rights.

Again, after the acquisition of jurisdiction over the islands by the United States it was provided by the Act of Congress of July 1, 1902:[2] Section 19. "That the beneficial use shall be the basis, the measure, and the limit of all rights to water in said islands." This in effect abrogates the common law right of riparian owners and grants the rights in waters to those actually applying the water to some beneficial use or purpose, regardless of the ownership upon the banks of streams.

§ 2021. Decree of April 28, 1886—Duties of the administration.
§ 2022. Decree of April 28, 1886—Jurisdiction of courts in questions relating to waters.
§ 2023. Riparian rights in Porto Rico.

§ 2010. **Particular features of the island.**—Part of the territory acquired through the treaty ending the Spanish-American War was that of the Island of Porto Rico, formerly one of the Spanish West India Islands, and lying 70 miles east of Hayti, between 17° 50′ and 18° 30′ north latitude, and 65° 35′ and 67° 10′ west longitude. The island forms an irregular parallelogram 108 miles long and 37 miles broad, and has an area of 3,530 square miles. From west to east it is traversed by a range of hills or mountains, so situated that the streams flowing northward are longer than those flowing south. The soil of the island is rich, fertile, and enduring, the climate mild, although the precipitation at some periods is heavy. The island is well watered, many streams being enumerated, of which 47 are considered rivers.

§ 2011. **Irrigation on the island.**—As the hills crossing the island from east to west intercept the northeast trade winds, with their rain clouds and draw the moisture therefrom, there is sometimes a superabundance of precipitation in the northern lowlands,

while during the same period on the southern portion of the island severe droughts may occur. Therefore, on the southern portion particularly the only surety of maturing crops is by means of irrigation, which, under Spanish rule, was carried on with too little co-operation and system. Since the island was acquired by the United States better systems have been and are being adopted, and the work is rapidly progressing along these lines.

§ 2012. **Criticism of the Porto Rican laws.**—The right to the use of water in the Island of Porto Rico is based upon the civil law, which, by Act of Congress of April 12, 1900,[1] was continued in full force and effect.[2]

Since the island has been owned by the United States the Spanish laws have been continued in full force and effect under the provisions of the statute quoted below.

By the Act of Congress of April 12, 1900,[3] Section 8, it was provided: "That the laws and ordinances of Porto Rico now in force shall continue in full force and effect, except as altered, amended, or modified hereafter, or as altered or modified by military orders and decrees in force when this Act shall take effect, and so far as the same are not consistent or in conflict with the statutory laws of the United States not locally inapplicable, or the provisions hereof, until altered, amended, or repealed by the legislative authority hereinafter provided for Porto Rico or by Act of Congress of the United States," etc. By this Act the laws governing waters on the island were continued in force.

§ 2013. **The Spanish-Porto Rican laws.**—Under the chapter upon the Philippine laws [1] we devoted certain sections to the abstracting of the old Spanish-Philippine laws, under which many of the existing water rights and rights of way were acquired in the Philippine Islands. These old Spanish laws were made equally applicable to Porto Rico and Cuba while those islands belonged to Spain, and under which laws certain rights to the use of water and

1 5 Fed. Stats. Ann., p. 762; 31 Stat. L. 77.

2 For a discussion of the Civil Law upon the subject of waters, see Secs. 552-584.

3 5 Fed. Stats. Ann., 1905, p. 762; 31 Stat. L. 77.

1 See Chap. 98, Secc. 1998-2009.

rights of way for ditches and canals were also acquired and are now existing as vested rights. The statutes in which these laws are found were originally enacted in the Spanish language, and in that language are identical to all of the islands named above. But the translations of these statutes from the Spanish language to the English language differs somewhat in the Philippine Civil Code of 1899, from that of the Porto Rican Revised Statutes and Civil Code of 1902, but the meaning is the same. The numbering of the articles of the two codes is also different. These statutes have been sufficiently set out in the chapter upon the Philippine Islands;[2] therefore, in our footnote we will simply give a comparative table of reference to the subject matter covered by the two codes.[3]

§ 2014. **Decree of April 28, 1886—Ownership of waters.**—By the decree promulgated by the Spanish Crown on April 28, 1886, the laws governing the waters of Porto Rico were amended to a considerable extent.[1]

This decree provides for the ownership of terrestrial waters.[2] Pluvial waters are defined and their ownership set forth.[3] The ownership of running waters, springs, and streams is also defined.[4]

And after so defining, the following are public or of public ownership: (1) Waters which rise continuously or intermittently on

1 See translation of the Law of Waters in force in the Island of Porto Rico, adapted from translation of the Law of Waters in force in the Island of Cuba by Division of Customs and Insular Affairs, War Department, Washington, D. C., with annotations of amendments made thereto by Acts of March 12, 1903, and March 9, 1905, Bureau of Printing and Supplies, San Juan, Porto Rico.

2 Title 1, Chaps, 1-4, Arts. 1-27.

3 Title 1, Chap. 1, Arts. 1-3.

4 Title 1, Chap. 2, Arts. 4-16.

lands of public ownership;( 2) continuous and intermittent waters of springs and creeks which flow through their natural beds; (3) rivers.

"Art. 5. Waters which rise continuously or intermittently on estates of private ownership, as well as on the property of the State, provinces, or towns, belong to the respective owners for their use and benefit while they flow through said property.

"As soon as water not utilized leaves the estate where it originated it shall be considered public for the purposes of this law. But if after leaving the estate in which it originated it naturally flows through another private estate, either before reaching public channels or after flowing through the same, the owner of said estate may temporarily utilize it, and afterward the owner of the estate situated immediately below, should there be one, and thus successively."

Provisions are made for the temporary utilization of the waters of springs and creeks, and the order of the preference for such use given.

"Art. 8. The right to utilize indefinitely the waters of springs and brooks is acquired by the owners of lower estates, and, in a proper case, by those of the adjacent estates, when they have been utilized without interruption for a term of twenty years."

The ownership of dead or stagnant waters is provided for as follows:

"Art. 17. Lakes and ponds formed by Nature, occupying public lands, are of public ownership.

"Lakes, ponds, and pools on lands belonging to private individuals, municipalities, the provinces, and to the State, are of their respective ownership. Those situated on communal property belong to the respective towns." [5]

The ownership of subterranean waters is also provided for as follows: [6]

"Art. 18. The subterranean waters obtained on an estate by means of ordinary wells are the full property of the owner of said estate."

"Art. 22. When it is desired to bring to the surface subterranean waters by means of artesian wells, tunnels, or galleries, the person finding the same and causing them to rise to the surface shall be the owner thereof in perpetuity, without losing his right thereto, even

[5] Title 1, Chap. 3, Art. 17.

[6] Title 1, Chap. 4, Arts. 18-27.

though they leave the estate in which they rose, whatever be the diversion which the discoverer may give to such waters as long as he retains the ownership of same.

"If the owner of the waters brought to the surface should not construct an aqueduct to carry the same through the lower estates which they cross, but leaves them to take their natural course, the owners of the latter shall enjoy the temporary right granted them."

**§ 2015. Decree of April 28, 1886—Beds or channels of waters—Banks, margins, accretions, protective works, and drainage of lands.**—The law provides for the control and ownership of beds or channels of streams, banks, margins, and accretions as follows:[1]

"Art. 28. The natural bed or channel of intermittent streams formed by pluvial waters is the ground which they cover during ordinary flows in the ravines or hollows which receive the same.

"Art. 29. The channels referred to in the foregoing article which cross private estates are private property.

"Art. 30. Channels which are not private property are of public ownership.

"Art. 31. The private ownership of channels of pluvial waters does not grant authority to perform labor or construct works which might divert the natural course thereof, to the prejudice of a third person, or whose destruction by reason of the force of the flow might injure estates, factories, or establishments, bridges, roads, or towns situated lower down."

The natural channel or bed of a river is defined as the ground covered by its waters during the greatest ordinary swells. The beds of all brooks belong to the owners of the estates they cross.

"Art. 34. The following are of public ownership:

"1. The beds or channels of the brooks which are not included in the foregoing article.

"2. The land covered by the natural beds or channels of rivers during the greatest ordinary swells.

"Art. 35. By banks are understood the lateral banks of the beds of rivers included between the low-water line and the line reached by the greatest ordinary swells, and by margins, the lateral zones which adjoin the banks."

[1] Title 1, Chap. 5, Arts. 28-51.

The banks of all rivers, even though they be of private ownership, are subject for their entire length and margins, for a zone of three meters, to the easement of public use in the general interest of navigation, flotation, fishing, and salvage.

It is also provided that the beds and edges of lakes, ponds, and pools are those which are covered by waters during their greatest ordinary height. These may belong to the State, to the provinces, or to municipalities, or other riparian owners.

Accretions, debris, and sediment of waters are also provided for and regulated;[2] also protective works along public waters,[3] and the drainage of lakes and swamp land.[4]

§ 2016. **Decree of April 28, 1886—Easements with regard to waters.**—Natural easements are provided for as follows:

"Art. 69. The lower lands must receive the waters which naturally, and without the work of man, flow from the higher estates, as well as the stones or earth carried by them in their course. But if the waters are brought to the surface by artificial works, or are the overflow from irrigating ditches, or emanate from industrial establishments which have not acquired this easement, the owner of the lower estate shall be entitled to recover losses and damages.

"The owners of lower estates or establishments may refuse to receive the overflow from industrial establishments which contain or carry with them in solution noxious substances introduced by the owners of the latter."[1]

The legal easements are divided into sections, and provide:

*Section 1. The Aqueduct Easement.*

"Art. 75. The compulsory easement for aqueducts may be imposed for carrying waters destined to some public service not requiring the condemnation of lands. It is the duty of the Minister of the Colonies to impose such easement for works in charge of the State, and the Governor of the province for provincial and municipal works, in accordance with the proceedings prescribed in the regulations."

"Art. 77. A compulsory easement for an aqueduct may also be imposed for private purposes in the following cases:

"1. Establishment or increase of irrigation.

[2] Title 2, Chap. 5, Arts. 40-51.
[3] Title 2, Chap. 6, Arts. 52-59.
[4] Title 2, Chap. 7, Arts. 60-68.
[1] Title 3, Chap. 8, Arts. 69-74.

"2. Bathing establishments and factories.

"3. Drainage of lakes and marsh lands.

"4. The vent or outlet of waters from artificial wells.

"5. Outlet of stagnant waters or drainage works.

"In the first three cases the easement may be imposed not only for the purpose of taking the necessary waters, but also for the outlet of the surplus."

*Section 2. The Easement of Dam Abutments, Stop Locks, or Sluice Gates.*

"Art. 102. A compulsory easement for dam abutments may be imposed when the person who intends to build a dam is not the owner of the banks or soil where they are to be placed, and the water to be taken is destined to a public service or a private purpose."

*Section 3. The Easement of Watering Troughs and of Drawing Water.*

"Art. 107. Obligatory easement of watering troughs and of drawing water may be imposed only for causes of public utility, in favor of some town or hamlet after the proper indemnity."

*Section 4. Easements of Towing Paths and Others Inherent to Riparian Estates* are provided for.

**§ 2017. Decree of April 28, 1886—Common utilizations of public waters.**—*Section 1. Utilization of Public Waters for Domestic, Agricultural, and Manufacturing Purposes.*

While waters run along their natural and public channels any person may make use thereof for drinking, washing clothes, vessels, and other objects, bathing, and watering or bathing horses or cattle, subject to the regulations and municipal police ordinances.

*Section 2. Utilization of Public Waters for Fishing.*

It is provided that any person may fish in public channels, subject to the law and police regulations relating especially to fishing, provided that navigation or flotation is not thereby obstructed.

*Section 3. Utilization of Waters for Flotation and Navigation.*

"Art. 134. The Government, by means of proceedings, shall declare, through royal decrees, the rivers which are to be considered navigable and floatable in whole or in part." [1]

[1] See, also, Arts. 135-146.

The special utilization of public waters is also provided for as follows:

*Section 1. Concessions of Utilizations.*

"Art. 147. Authority is necessary for the utilization of public waters specially destined to enterprises of public or private interest, excepting," etc.

"Art. 153. The waters granted for a given utilization shall never be applied to a different purpose without the proceedings corresponding to the granting of a new franchise: Provided, that the waters granted for irrigating purposes may also be used for industrial preparation of the products of the land to be irrigated: Provided, that the original volume of water granted shall not be altered and the waters granted to produce power which subsequently must be returned to the stream, may also be used for any other industrial purposes which will not render them unfit to be returned to the stream."

*Section 2. Utilization of Public Waters for the Supply of Towns* is provided for.

*Section 3. Utilization of Public Waters for Supply of Railroads* is provided for.

"Art. 172. Railroad companies may utilize, after competent authorization, such public waters as they may require. Authorization shall be granted by the Governor of the province when the consumption of water does not exceed 100 cubic meters per day; if above this amount, the Minister of the Colonies shall decide."

§ 2018. **Decree of April 28, 1886—Utilization of public waters for irrigation.**—Title IV, Chapter 10, Section 4, of the decree of April 28, 1886, provides for the utilization of public waters for irrigation as follows:

The owners of estates adjoining public roads may collect pluvial waters coursing along the same, and make use thereof in irrigation of their estates; the owners of estates adjoining public channels having an intermittent supply may utilize in their irrigation the pluvial waters coursing through the same, and construct for such purposes dikes and movable dams. Such dams must be removed when they are liable to cause inundations or any other damage to the public. Any person who shall have made use for a term of twenty years of pluvial waters may object to the owners of the up-

per estates depriving him of said use. When it is desired to build permanent dikes or dams for factories in order to use in irrigation pluvial waters or intermittent springs which course through public channels, the authorization of the Governor of the province shall be required. An authorization is also required to construct reservoirs. In navigable rivers the riparian owners may without restriction establish on their respective margins pumps or any other apparatus for the extraction of the water required for the irrigation of their estates, provided that they do not hinder navigation.

"Art. 185. Authorization from the Minister of the Colonies is necessary for the use of public waters for irrigation purposes which are to be taken or secured by means of dams, dikes, or other permanent works constructed in rivers, hollows, brooks, or in any other kind of permanent natural currents, provided more than 200 liters of water per second are to be taken therefrom.

"Art. 186. If the amount of water to be secured or diverted from its natural course does not exceed 200 liters per second, the Governor of the province shall grant the concession after the proper proceedings, but the petitioner may appeal to the Minister of the Colonies.

"The Governor shall also authorize the rebuilding of old dams for irrigation or other purposes. When the works to be executed in the dams consist of repairs or works for the maintenance thereof, and do not change the conditions of the grant, they may be made without previous authorization, but a report of the same shall be made to the Governor of the province.

"Art. 187. The Governor-General can not grant more than one concession for the same intake, of which the dam forms a part."

Applications for concessions referred to above must be made in accordance with the provisions of the decree.

§ 2019. **Decree of April 28, 1886—Communities of irrigators and their syndicates.**—"Art. 228. In collective rights to public waters for irrigation a community of irrigators shall necessarily be organized, subject to the provisions of its ordinances:

"1. When the number of irrigators is not less than ten and when the irrigable land is not less than 200 hectares.

"2. When in the judgment of the Governor of the province the local interests of agriculture shall require it.

"With the exception of those cases the organization of a community shall be at the will of a majority of the irrigators.

"Art. 229. Irrigators whose estates take the water either before or after a community, and are contiguous to one another, or make payment without interruption, are under no obligation to belong to the community, and may withdraw therefrom or organize another, as the case may be, notwithstanding the provisions of the preceding article.

"Art. 230. Every community shall have a syndicate elected by the same and entrusted with the execution of the rules and regulations of the respective community."

It is also provided that the communities of irrigators shall draft rules for irrigation in accordance with the basis established in the law, submitting them for the approval of the Government. All expenses incurred by the communities in the building of dams or channels, or for their repair, preservation, or cleaning, shall be defrayed by the irrigators in equitable proportion.

"Art. 237. The community shall make the regulations for the syndicate. The following shall be the duties of the syndicate:

"1. To watch over the interests of the community, promote its development, and defend its rights.

"2. To make proper provision for the best distribution of the waters, respecting acquired rights and local customs.

"3. To appoint and remove its employees in the manner established in the regulations.

"4. To prepare the budgets and assessments and audit the accounts, submitting both for the approval of the community at the general meeting.

"5. To recommend to the meeting the rules and regulations or any changes which they may consider advisable to introduce into those in force.

"6. To establish strict terms for receiving water, conciliating the interests of different cultivations among the irrigators, and taking care that in years of drought the water be distributed in the most convenient manner for said interests.

"7. All the duties and powers granted by the rules of the community, or by the especial regulations of the syndicate themselves.

"The decisions rendered by the irrigation syndicates within their rules, when they act as delegates of the administration, may be ap-

pealed from to the municipal councils or to the Governor-General, as the case may be."

Every syndicate shall elect from among its members a president and vice-president, with such powers as may be fixed by rules and regulations. The community irrigators shall hold general stated meetings at fixed periods. These meetings may be attended by all the irrigators of the community and all industrials interested. When there are several communities and syndicates in the course of a river one or more central or common syndicates may be established by mutual consent for the protection of all rights.[1]

§ 2020. **Decree of April 28, 1886—Irrigation boards of arbitrators.**—"Art. 242. In addition to the syndicate there shall be one or more boards of arbitrators in every community, according to the amount of irrigation.

"Art. 243. Every board shall be composed of a president, who shall be a member of the syndicate, designated by the latter, and of the number of members and alternates fixed by the regulations of the syndicate, all of whom shall be appointed by the community.

"Art. 244. It is the duty of the board of arbitrators:

"1. To take cognizance of questions of fact which arise on irrigation between the persons interested therein.

"2. To impose upon the violators of the irrigation ordinances such penalties as may be proper in accordance therewith.

"Art. 245. The proceedings of the board shall be public and oral, in the manner prescribed in the regulations. Its decisions, which shall be final, shall be entered in a book, with a statement of facts and of the provision of the ordinances on which the decision is based.

"Art. 246. The penalties which may be established in irrigation ordinances by reason of infractions or abuses in the utilization of waters, obstruction of channels or sluices, or other violations shall be pecuniary, and shall accrue to the person injured and the funds of the community, in the manner and proportion established in said regulations.

"Should the act constitute a crime, the culprit may be complained against by the irrigator or industrial injured or by the syndicate.

1 See Title 5, Chap. 13, Sec. 1, Arts. 228-241.

"Art. 247. Where boards of arbitrators of irrigation exist since former times they shall continue under their present organization until the respective communities decide to recommend the reorganization thereof to the Minister of the Colonies."

**§ 2021. Decree of April 28, 1886—Duties of the administration.**—"Art. 248. It is the duty of the Minister of the Colonies, as the person intrusted with the execution and enforcement of this law:

"1. To issue such rules and regulations as may be necessary therefor.

"2. To make concessions of such water rights as are the object of this law, either by himself or through the authorities under him, provided that the granting of same is not a function of other authorities or of the legislative power under the expressed provisions of this Act.

"3. To definitely pass upon all questions which may arise in the application of this law, when the decisions of his delegates are not final, with the exception of such remedies as may be proper in accordance with the same.

"4. To order and execute the demarcation and survey of all property belonging to the public domain under the provisions of this law, without prejudice to the jurisdiction of the courts as to questions of ownership and possession."

The approval of plans, for which authority is vested in the Governor-General, and the granting of concessions for which he is empowered, shall be completed within a period of six months.

"Art. 252. The courts of justice shall not permit any injunctions in the decisions rendered by the central administration within its powers with regard to waters. The courts may only take cognizance at the instance of a party when in the cases of condemnation prescribed in this law, the proper indemnity has not been paid before the dispossession."

**§ 2022. Decree of April 28, 1886—Jurisdiction of courts in questions relating to waters.**—"Art. 253. In appeals from the decisions rendered by the administration in matters relating to waters contentious administrative jurisdiction shall lie in the following cases:

"1. When a concession granted to individuals or companies in the terms prescribed in the general laws of public works is declared forfeited.

"2. When rights acquired under the decisions of the administration are impaired by orders emanating therefrom.

"3. When a compulsory easement or any limitation or encumbrance is imposed on private property in the cases provided by this law.

"4. In questions which arise with regard to the payment of damages and losses in consequence of the limitations and encumbrances referred to in the foregoing paragraph.

"Art. 254. Civil courts are of competent jurisdiction in matters relating to:

"1. The ownership of public waters and the ownership of private waters and their possession.

"2. The ownership of shores, channels, or beds of rivers, and the ownership or possession of the banks, without prejudice to the powers of the administration to survey and fix the boundaries of public property.

"3. The assessment of waters and rights of way over margins, based on title of civil law.

"4. The right to fish.

"Art. 255. Questions arising between private individuals with regard to a preferred right of utilization according to this law are also within the jurisdiction of the courts as to

"1. Pluvial waters.

"2. Other waters out of their natural channels, where such preference is based on titles of civil law.

"Art. 256. The courts shall also have jurisdiction of questions relating to losses and damages occasioned to a third person with regard to his rights of private ownership, the alienation of which is not compulsory.

"1. By digging of ordinary wells.

"2. By the boring of artesian wells and by the execution of subterranean works.

"3. By any kind of utilizations in favor of individuals."

§ 2023. **Riparian rights in Porto Rico.**—As is the case with the Philippine Islands, the common law of riparian rights never existed in Porto Rico. The basis of the law governing waters is the civil law as modified by Spanish legislation.[1]

[1] For riparian rights in the Philippines, see Sec. 2009.

# CHAPTER 100.

## SOUTH DAKOTA.

§ 2024. Particular features of the State.

§ 2037. Provisions in aid of the National Reclamation Act.
§ 2038. Criminal statutes—The pollution of water.
§ 2039. Riparian rights in the State.

**§ 2024. Particular features of the State.**—In general what has been said about the particular features of North Dakota will also apply to the State of South Dakota.[1] The greater portion of the State lies within the Great Plains and semi-arid regions of the United States. The supply of surface water in rivers, streams and lakes is large, and there are enormous tracts of irrigable lands. One of the features of the State is the great supply of subterranean waters, which, when tapped by artesian wells, also furnishes a large supply of water which can be utilized for all purposes.[2]

The precipitation in the State is considerable, but varies in different portions. At Aberdeen the annual precipitation for the last twenty years is 27.54 inches, while at Ashcroft it is only 13.68 inches. As in North Dakota, in many portions of the State it is more a question of drainage than of the application of the water to

1 See Secs. 1942-1957.

2 See Geology and Underground Waters of South Dakota, by N. H. Darton, 1909, Water-Supply Paper No. 227, U. S. Geological Survey; Small Reservoirs in Wyoming, Montana, and South Dakota, by F. C. Herrmann, 1907, Office Experiment Stations, Bulletin No. 179, U. S. Dept. of Agriculture.

the land for irrigation. The climate is warm in the summer and there is a sufficient period to mature all crops of grain, hay, and fruits. In the winter time there is considerable severe cold weather. In general it may be said that the State is one of the most prosperous of the semi-arid region.

§ 2025. **Irrigation in the State.**—While the State of South Dakota can not be classed strictly as an irrigation State, in the sense that irrigation is an absolute necessity, as is the case in the more arid States, but as an adjunct to the rainfall and as a safeguard to the production of crops, there are many irrigation enterprises within the State. The situation in the State is peculiar because of the great variation of the local requirements in different portions of the State. In the eastern portion of the State there is great need for the reclamation of lands by drainage, while in the western portion, especially in the region adjacent to the Black Hills, irrigation is extensively practiced. In this section of the State irrigation was first practiced on a commercial scale. According to the last report of the State engineer 72,901 acres were actually supplied with water for irrigation in the State in the year 1910, while 142,173 acres would be reclaimed under works under the process of construction, thus making a total of 215,074.[1] The most of the water used for irrigation is taken directly out of the streams, very little being used from reservoirs. Apparently the State has not yet entered upon the period of storage of waters to any great extent. There are, however, many smaller dams constructed on the so-called dry draws, for the purpose of storing small quantities of flood water, and by the means of which many gardens and fields of alfalfa are kept in a flourishing condition.

Under the National Reclamation Act the General Government has constructed the Belle Fourche project, in Butte and Meade Counties. The irrigable area of the whole project is 100,000 acres. Other projects have been surveyed.

By the Act of the legislature of 1909 the provisions of the Carey Act were accepted by the State and measures taken for its operation. But nothing appears to have been accomplished in this respect. The State engineer in his last report says: "On account of the enor-

[1] See the Report of the State Engineer, 1909-1910, Samuel H. Lea, State Engineer, pp. 69-85.

mous influx of settlers during the past two years, it appears that it is almost impossible to find any tract of land of suitable extent for reclamation as provided by the Carey Act. Numerous inquiries have been received concerning the matter of settlement and colonization of a tract of land under the Carey Act law, but up to the present time nothing has been done in the matter."[2] But, under date of September 6, 1911, the State engineer writes the author: "This law has been inoperative, however, for the reason that there are no areas of public land in this State of sufficient size to warrant the reclamation of same under the provisions of the Carey Act."

The State never adopted the irrigation district law, as the same is known in California and other States, so nothing has been done in that respect.

Throughout the western and middle portions of the State there are many private projects of small capacity, as compared with those of other States, operated by individuals and corporations.[3]

According to the United States census for 1910 the total number of farms irrigated in 1909 was 500, against 606 irrigated in 1899, a decrease of 106, or 17.5 per cent.

The total acreage irrigated in 1909 was 63,248 acres, against 43,676 acres in 1899, an increase of 19,572 acres, or 44.8 per cent. The total acreage which all enterprises were capable of irrigating in 1910 was 128,481 acres. The acreage included in projects now completed or under construction is 201,685 acres.

The acreage irrigated in 1909, classified by the type of enterprises, is given as follows: Under the United States Reclamation Service, 5,613 acres; under the United States Indian Service, 50 acres; under co-operative enterprises, 13,601 acres, under commercial enterprises, 6,300, and under individual and partnership enterprises, 37,684 acres.

2 Third Biennial Report of the State Engineer, 1909-1910, p. 154.

3 For information upon the subject, see Irrigation in South Dakota, Bulletin No. 210, Office of Experiment Stations, U. S. Dept. of Agriculture; Third Biennial Report of the State Engineer of South Dakota, 1909-1910; Geology and Underground Waters of South Dakota, by N. H. Darton, 1909, Water-Supply Paper No. 227, U. S. Geological Survey; Small Reservoirs in Wyoming, Montana, and South Dakota, by F. C. Herrmann, 1907, Office of Experiment Stations, Bulletin No. 179, U. S. Dept. of Agriculture.

See, also, the various reports of the Reclamation Service, subject, South Dakota.

**§ 2026. Criticism of the South Dakota laws.**—There is very little adverse criticism that can be made of the statutes of South Dakota governing the waters within the State. The State legislature seems to have met every condition, and to have provided laws governing the same, except, possibly, the enactment of a general irrigation district law following that of California. As it seems to us, the conditions are favorable and the time ripe for the enactment of such a law. The legislature of 1911 enacted an irrigation district law, but it was vetoed by the Governor on the grounds of unconstitutionality.[1] The citizens of the State seem satisfied with the present laws governing the control and distribution of waters within the State, based as the laws are primarily upon those of State control. The State engineer in his last report says: "The experience of the past four years of the administration of the Water Code has demonstrated that in the main the present laws relating to water appropriations are satisfactory."[2] In the main this Water Code and that of North Dakota are similar,[3] and although not as extensive as the codes of some of the States, it is very effective. The adjudication of water rights is left, in the first instance, to the courts, where it properly belongs.[4] The laws are liberal and the conditions of the State favorable for a more rapid development of the water resources of the State during the next ten years than there has been during the past twenty.

**§ 2027. Water rights defined—The water code.**—There are no constitutional provisions relative to the subject of waters in the State of South Dakota.

By statute, relative to the ownership of waters within the State and the right to the use thereof, it is declared:

"All the waters within the limits of the State from all sources of

1 The State engineer, under date of Sept. 6, 1911, writes the author: "It is a matter of regret that we have no adequate irrigation district law in this State, for the reason that such a law could be made use of to advantage at the present time. It is probable that an effort will be made to formulate an adequate law of this nature for submission to the legislature of 1913."

2 Third Biennial Report of the State Engineer of South Dakota, 1909-1910, p. 185.

3 For Code of North Dakota, see Secs. 1946-1952.

4 See Sec. 2030.

water supply belong to the public, and except as to navigable waters, are subject to appropriation for beneficial use." [1]

Relative to water rights based upon the appropriation of waters and the abandonment of the same, the statutes of South Dakota are identical with those of North Dakota, heretofore discussed.[2]

The Water Code in which the above provisions are found was first adopted by the legislature of South Dakota in 1905.[3] Owing to the fact that it was found defective in some portions, two years after, by the Act of 1907 a new code was adopted, and for a time there were two Water Codes upon the statutes.[4] It being found that in the two codes there was considerable conflict, by the Act approved March 9, 1909, the first code of 1905 was repealed,[5] so that now the later code of 1907, with its subsequent amendments, is in full force and effect, and in many respects is identical with the provisions of the Irrigation Code of North Dakota, heretofore discussed.[6]

"The owner of the lands owns the waters standing thereon or flowing over or under its surface, but not flowing in a definite stream. Water running in definite streams formed by Nature over or under the surface may be used by him as long as it remains there, but he may not prevent the natural flow of the stream or of the natural springs from which it commences its definite course, nor pursue nor pollute the stream." [7]

"Any person or persons, corporation or company, who may have or hold a title or possessory right to any mineral or agricultural lands within the limits of this State shall be entitled to the usual enjoyment of the waters of the streams or creeks in said State for mining, milling, agricultural, or domestic purposes: Provided that the right to such use shall not interfere with any prior right or claim

1 Laws South Dakota, 1907, p. 373, Sec. 1.

The above section is identical with the Rev. Codes of North Dakota, 1905, Sec. 7604. See Sec. 1946.

2 Laws S. D., 1907, p. 373, Secs. 2, 46.

For law of North Dakota on same subject, see Sec. 1948; Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402; Edgemont Co. v. N. S. Tubbs Co., 22 S. D. 142, 115 N. W. Rep. 1130.

3 Laws, 1905, pp. 201-215.

4 See Laws, 1907, pp. 373-389.

5 Laws, 1909, p. 262.

6 For the irrigation code of North Dakota, see Secs. 1946-1951; Lone Tree Ditch Co. v. Cyclone Ditch Co., 15 S. D. 519, 91 N. W. Rep. 352.

7 Revised Code of 1903, Sec. 278.

to such waters when the law has been complied with in doing the necessary work."[8]

§ 2028. **Division of the State and administrative officers.**—For administrative purposes the State of South Dakota is divided into three water divisions, the boundaries of which are defined by the statute. These divisions, in turn, are divided into water districts by the State engineer.[1]

*Board of Water Commissioners.*—The water commissioners of the three water divisions, together with the State engineer, form this board. The powers and duties of the board are identical with those of the board in North Dakota.[2]

*State Engineer.*—The office of the State engineer is provided for. The engineer to receive a salary of $2000. The powers and duties are identical with those of the State engineer of North Dakota.[3]

*Water Commissioners.*—Water commissioners shall be appointed by the Governor for each water division for a term of six years, and shall be subject to removal by the Governor. The pay is $5 per day for each day serving. Their powers and duties are similar to those of North Dakota.[4]

*Water Masters.*—Although the law provides that the State engineer may divide each division into water districts, no provisions are made for water masters or other official to supervise these districts, as is the case in North Dakota, this work being left to the water commissioners.[5]

§ 2029. **The appropriation of water.**—The procedure for the appropriation of water is almost identical with that in the State of North Dakota, which, in turn, follows that of Wyoming.[1] The State engineer may, in his discretion, approve any application for a

less amount of water than that applied for, or may vary the periods of annual use. The usual appeal to the District Court is allowed.

The right is also given to appropriate flood waters, and for that purpose to construct dams across any dry draw or water course. A notice of such appropriation must be filed with the register of deeds, and posted at or near the head of the ditch or flume. The words "dry draws" and "water courses" are defined to mean any ravine or water course not having a flow of at least twenty miner's inches of water during a greater part of the year. Work must begin within sixty days after the posting of the notice, and be completed with diligence. Should a certificate of appropriation be desired, a petition for the same must be filed with the State engineer, setting forth the full facts of such appropriation. If the petition complies with the notice and the law, it is the duty of the State engineer to issue the certificate to the owner. "Said certificate, signed by the State engineer under the seal of his office, is hereby declared to be a water right under the laws of this State, and shall be accepted as *prima facie* evidence in all the courts of this State that the petitioner therein named, or the lawful holder thereof, has complied with the laws of this State in obtaining the same."[2] Both permits and licenses may be assigned.[3]

§ 2030. **The adjudication of existing rights.**—All adjudications and determinations of existing rights are made by the courts. And for this purpose the State engineer shall make hydrographic surveys and shall co-operate with the agencies of the United States engaged in similar surveys and investigations. The proceedings are somewhat similar to those in North Dakota, although they differ in certain particulars.[1] Whenever a suit is brought for this purpose a copy of all pleadings must be mailed to the State engineer immediately after service thereof on the opposite party; and if in his judgment the public interest requires action adverse thereto, then he may call upon the Attorney-General of the State to intervene in such action; and no adjudication can be had until proof of the service of the pleading at least thirty days prior to the final adjudication upon the State engineer is made. It is also made the duty

[2] Laws, 1907, p. 382, Sec. 31, as amended by Laws, 1911, Chap. 263, p. 468, Subds. a-f.

[3] Laws, 1907, p. 383, Sec. 32.

[1] For the adjudication of rights in North Dakota, see Sec. 1949.

of the Attorney-General to enter original suit on behalf of the State for the purpose of determining such rights when in the judgment of the State engineer the public interests require such action. All persons interested must be made parties, and the costs of such actions charged against the respective parties thereto in proportion to the amount of the water allotted. The Court in which any action is properly brought is given exclusive jurisdiction to determine all questions necessary for the adjudication of such rights within the stream system involved. The final decree must be the same as that in North Dakota, and duplicate copies filed with the State engineer and the water commissioner.[2]

**§ 2031. Water rates—Standard of measurement—Distribution.**—As is the case in North Dakota, the owner of works may be compelled to deliver any surplus water to applicants "at reasonable rates as determined by the State engineer."[1]

The standard of measurement is also the same: For flow, the cubic foot per second of time; for volume, the acre-foot. The miner's inch, one-fiftieth of a cubic foot per second.[2] The amount allowed for irrigation shall not exceed one cubic foot per second for each seventy acres.[3]

The water right is made appurtenant to the land, but its use may be transferred to other lands, or the place of use or point of diversion may be changed by application to the State engineer.[4]

**§ 2032. Ditches and canals—Rights of way and condemnation proceedings therefor.**—Rights of way are granted over all State lands.[1] The right of condemnation is granted for rights of way over private lands in the following language:

"The United States, the State, or any person or any private or public corporation, or any association of persons may exercise the right of eminent domain to acquire as a public use any property or rights now or hereafter existing when found necessary for the application of water to beneficial uses, including the right to enlarge existing structures and to use the same in common with the former

owner. Any canal right of way so acquired shall be so located as to do the least damage to private or public property, consistent with proper and economical engineering construction. Such property or rights may be acquired in the manner provided by law for the taking of private property for public use."[2] The natural or artificial water courses may be used for the conducting of the water of any party.[3] All works are subject to the inspection of the State engineer.[4] Measuring devices and bridges must be constructed by the owners of works.[5]

**§ 2033. Corporations and companies—Duty to furnish water.**—Corporations are also given the power to appropriate water, condemn lands and other powers relative to the control and use of waters within the State. It is also provided that they must sell or lease water or water rights at a reasonable figure, and must also deliver to parties entitled to the use of water such quantity as they may need and which is still within the capacity of their works.

By the Act of 1907 [1] among other things it is provided: "The owner of works proposing to store or carry water in excess of their needs for beneficial use may make application for such excess and shall be held as trustees of such right for the parties applying the water to a beneficial use, and shall be required to sell water rights for a reasonable price and to furnish the water for such parties at reasonable rates for storage, or carriage, or both, as the case may be.

"The owner or owners of any works for the storage, diversion, or carriage of water, which contain water in excess of their needs for irrigation or other beneficial use for which it has been appropriated, shall be required to deliver such surplus at reasonable rates for storage, or carriage, or both, as the case may be, to the parties entitled to the use of the water for beneficial purposes. In the case of the refusal of such owner or owners to deliver any such surplus water at reasonable rates as determined by the State engineer, they may be compelled to do so by the Circuit Court for the county in which the surplus water is to be used."

2 Laws, 1907, Chap. 180, Sec. 3.
3 Laws, 1907, p. 373, Sec. 4.
4 Laws, 1907, p. 381, Secs. 27, 28.
5 Laws, 1907, p. 386, Sec. 52, p. 387, Sec. 53.
1 Laws, 1907, Chap. 180, Secs. 1935, 1936.

**§ 2034. The construction of reservoirs.**—Provisions are also made for the construction of reservoirs by private parties or corporations, or by civil townships, for the storage of surface or flood waters.[1]

**§ 2035. Artesian wells.**—Owing to the great possibilities in the State of South Dakota for obtaining artesian wells,[1] as early as 1890 there was approved an Act to encourage the sinking of such wells.[2]

*Corporations for Sinking Artesian Wells.*—The Act provides: "It shall be lawful for any person or persons, corporation, or corporations, company, or companies to construct artesian wells upon any lands owned or leased by such person, company, or corporation for the purpose of power and the irrigation of land for agricultural purposes, and for any and all purposes for which said water from said well may be utilized."

The Act provides that a right of way may be obtained for ditch purposes, but that improved lands shall not be crossed by more than one ditch where one can be made to serve the purpose. It also provides for disposing of the surplus water; penalties are prescribed for interfering with or injuring any of the works; the owners must keep all ditches and waterways in good repair; and when the ditch crosses the lands of a person, such person may apply to the owner of the ditch for a right to use the surplus water flowing therein to irrigate his lands, and such owner shall allow him to do so on payment of a just rental. Water rates are to be fixed by the county commissioners.[3]

*Sinking Artesian Wells by Counties.*—By an Act approved March 6, 1893,[4] it is provided that the sinking of artesian wells may be done by counties, upon taking proper proceedings therefor, upon a petition signed by not less than fifty resident freeholders of any county, of whom fifteen shall each be the owner of not less than eighty acres of land, located on any water course on which an artesian well is sought to be located. A vote upon the proposition

1 See Rev. Codes S. D., 1903, Secs. 2735-2754.

1 See Third Biennial Report of the State Engineer, 1909-1910, pp. 96-149.

For artesian wells, see Secs. 1166-1184.

2 Laws, 1890, p. 245.

3 Rev. Codes S. D., 1903, Secs. 2628-2647.

4 Rev. Codes, 1903, Secs. 2648-2679, 2755-2760.

must be taken, and, if carried, contracts may be let for the sinking of such wells, assessments levied and collected for the payment of the expenses thereof. And it is further provided that: "All artesian wells constructed under the provisions of this article shall be owned by the county and controlled by the board of county commissioners."

*Sinking of Artesian Wells by Civil Townships.*—By the Act of 1891 it is also provided that artesian wells may be sunk by civil townships.[5]

General provisions are also made for the distribution of the water from artesian wells, for the prevention of waste, and the interference with the same.

§ 2036. **The Carey Act in South Dakota.**—It was not until 1909 that the State of South Dakota accepted the provisions of the Carey Act. By the Act of February 24 of that year [1] the provisions of the Carey Act were accepted and measures taken for its operation. But, as reported by the State engineer, these operations as yet have not been very extensive.[2] By the Act a board was created, consisting of three members, the State engineer, State Auditor, and the Commissioner of Schools and Public Lands; the board to be known as the Carey Land Act Board, said board to serve without compensation, and of which the State engineer is *ex officio* chairman. The usual powers are granted the board to request the withdrawal of the lands from entry and to make contracts for the construction of the reclamation works. The contracting company may sell water rights and maintain and operate the works until 90 per cent of the lands for which such works are constructed have been sold and paid for, when such works shall be turned over to the settlers, who shall have the right thereafter to maintain and operate them. The contractor is given the right, so long as he maintains and operates the works, to charge not to exceed $1 per annum per acre for the cost of maintenance, operation, and delivery of the water.

It is also made the duty of the board to aid co-operative projects. To this end parties desiring to incorporate as a co-operative irrigation association for the purpose of reclamation of arid lands by their

5 Rev. Codes, 1903, Secs. 2680-2730.

1 Laws, 1909, Chap. 79, p. 135.

For the full discussion of the Carey Act, see Secs. 1312-1336.

2 See Sec. 2025.

own labor may organize for that purpose. Each member shall subscribe to one share of stock for each forty-acre tract of land to be filed upon and reclaimed by him, and the total number of shares shall be limited to one share for each forty acres. The works may then be constructed by such association, and the usual reclamation proceeded with by the settler, upon proof of which the patents issue direct to each stockholder.

"Water rights for said lands shall be appurtenant to and inseparable from the legal subdivisions for which it is appropriated."

The feasibility of all projects must be passed upon by the State engineer and by the board before the same will be ratified and the selection made.

Any citizen of the United States over the age of 21 years may make application. The application must be accompanied with 25 cents per acre for the land entered; the balance must be paid upon final proof. The price fixed for the land is not less than 50 cents nor more than $2.50 per acre, except to mutual associations, when the additional payment shall not exceed $1 per acre. The application must also be accompanied with a water right contract with the contracting company, which is given the usual lien for the payment thereof.

**§ 2037. Provisions in aid of the National Reclamation Act.**—The right is also given the United States to appropriate the waters in the State under the provisions of the National Reclamation Act.[1] And the sale of all State lands under such projects must conform to the farm units as specified by the Reclamation Service.[2] Also, the Act approved February 26, 1909,[3] provides for the organization of water users' associations under the laws of the State and in conformity with the requirements of the United States under the Reclamation Act.[4]

**§ 2038. Criminal statutes—The pollution of water.**—The criminal statutes of the State are almost identical with those of the State of North Dakota upon the subject.[1]

1 Laws, 1907, p. 384, Sec. 37.
2 Laws, 1907, p. 389, Sec. 59.
3 Laws, 1909, p. 155.
4 For water users' associations, see Secs. 1281-1286.
1 Laws, 1907, Secs. 51, 52, 54, 55. For North Dakota, see Sec. 1956.

Upon the subject of the pollution of water it is provided that the throwing of any gas, tar, or refuse of any gas house or factory, or the placing or causing to be placed any manure, offal, carcasses of animals, or other deleterious substances into any river, stream, or lake in the State, or upon the banks thereof, is a misdemeanor and punishable by a fine of not less than $10 nor more than $100, or by imprisonment in the county jail.

It is further provided: "This Act shall not be construed as to interfere with or prevent any necessary or legitimate mining operations or sewage system."[2]

§ 2039. **Riparian rights in the State.**—What has been said relative to riparian rights in North Dakota apply with equal force to those rights in South Dakota.[1] The old common law as to the right of a riparian owner to the undiminished flow of a stream running by his lands, without the actual use thereof, may be deemed as abrogated by the Water Code of 1907, with the exception of such rights as had vested prior to that date. That section of the Water Code which declares: "Any person, association, or company who may have or hold any possession, right, or title to any agricultural lands within the limits of this State shall be entitled to the usual enjoyment of the waters of the streams or creeks in said State," etc., should be construed with previous sections of the same code, wherein it is declared that all waters within the State belong to the public, and are subject to appropriation for beneficial use, and that such use shall be the basis, the measure, and the limit of the right.[2] Even two years before the Water Code was adopted it was held by the Supreme Court of the State that the right of a riparian owner to appropriate the water of a stream for irrigation purposes was limited to the amount actually used by him for proper irrigation purposes within a reasonable time after his settlement on the land.[3]

[2] Rev. Codes S. D., 1903; Penal Code, Secs. 445-448.

[1] For riparian rights in North Dakota, see Sec. 1957.

[2] See Laws, 1907, p. 382, Sec. 31, as amended by Laws, 1911, p. 468, in connection with Laws, 1907, p. 373, Secs. 1, 2.

[3] Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402.

See, also, Lone Tree D. Co. v. Cyclone D. Co., 15 S. D. 519, 91 N. W. Rep. 352; Metcalf v. Nelson, 8 S. D. 87, 65 N. W. Rep. 911, 59 Am. St. Rep. 746; Lone Tree D. Co. v. Rapid City etc. Co., 16 S. D. 451, 93 N. W.

This decision was in itself a repudiation of the common law doctrine that a riparian owner was entitled to the undiminished flow of the stream that flowed by his land, as a part and parcel thereof, and that regardless of the question of use.

Rep. 650; Stenger v. Tharp, 17 S. D. 13, 94 N. W. Rep. 402; Redwater etc. Co. v. Reed, 26 S. D. 466, 128 N. W. Rep. 702; Redwater etc. Co. v. Jones Co., —— S. D. ——, 130 N. W. Rep. 85; Driscoll v. Rebb, 22 S. D. 242, 117 N. W. Rep. 135.

But see Sturr v. Beck, 133 U. S. 541, 33 L. Ed. 761, 10 Sup. Ct. Rep. 350, decided before the adoption of the water code.

§ 2045. Corporations and companies.
§ 2046. Ditches and canals and rights of way therefor.
§ 2047. Adjudication of existing rights.
§ 2048. Regulating the mode of irrigation in commissioners' court.
§ 2049. Irrigation district law.
§ 2050. Drainage and drainage districts.
§ 2051. Acts in aid of the National Reclamation Act.
§ 2052. Duties of the commissioners of agriculture relative to irrigation.
§ 2053. Riparian rights in Texas.

**§ 2040. Particular features of the State.**—Strictly speaking, the western part of Texas is included within the arid region, but since the greater portion of that State is semi-arid, the State is properly placed in that class. The State, with its vast area and greatly diversified topography and climate, contains lands well adapted to the cultivation of a wide variety of agricultural products. The arid portion of the State may be described as belonging to the drainage basins of the Rio Grande and Pecos Rivers. The elevation of this portion of the State varies from two to six thousand feet, and the annual precipitation ranges from eight to seventeen inches. The soil, particularly in the valley of the Rio Grande, is of exceeding fertility, and when sufficiently watered is adapted to the cultivation of almost all the agricultural products of the temperate and sub-tropical climate. The water of this territory can not be said to be distributed with any degree of equality, and in many localities there is practically no water for the vast tracts of arid lands.[1]

[1] See Report of Progress on Stream Measurements for the Calendar Year 1902, by F. H. Newell, 1903, Part III, Western Mississippi and Western Gulf Drainage, Water Supply and Irrigation Paper No. 84, U. S. Geological Survey; Surface Water Supply of the Western Gulf of Mexico and Rio Grande Drainages, by T. U. Taylor and W. A. Lamb, District Hydrographers, 1907, Water Supply and Irrigation Paper No. 210, U. S. Geolog-

§ 2041. **Irrigation in the State.**—Irrigation along the Rio Grande Valley, as is the case in Arizona and New Mexico, is of ancient origin.[1] On many of the canals now in use the methods of irrigating have undergone little change in the last two centuries. In some portions of Texas irrigation is indispensable, while in others it is found to be a very useful adjunct to the rainfall for the cultivation of crops of all kinds, including those of cotton and rice. The soil in general is fertile, and where there is water it is easily accessible. The science of irrigation being absolutely essential in the arid portion of the State, is more appreciated there, but in the semi-arid region of Central Texas, where the land has considerable value without irrigation, the value of the waters of the natural streams, while none the less great, is not so fully appreciated, although irrigation would double the already munificent productiveness of the soil.[2]

According to the census of 1910 the total number of farms irrigated in 1909 within the State was 4,907, as against 1,325 in 1899, an increase of 3,582, or 270.3 per cent. The total acreage irrigated in 1909 was 450,971 acres, against 49,652 in 1899, an increase of 401,319 acres, or 808.3 per cent. The total acreage which all enterprises were capable of supplying with water in 1910 was 693,496 acres. The area included in projects either completed or under construction in 1910 was 1,252,935 acres. The above figures include acreage in the cultivation of rice.

The acreage irrigated has been classified according to the character of enterprise by which it was controlled as follows: Co-operative enterprises, 41,186 acres; rice irrigation enterprises, other

For irrigation in New Mexico, see Secs. 83, 1925.

2 See Irrigation of Rice in United States, by Frank Bond and George H. Keeney, 1902, Office of Experiment Stations, Bulletin No. 113, U. S. Dept. of Agriculture; Irrigation in South Texas, by Aug. J. Bowie, Jr., Separate No. 6, Reprint from Office of Experiment Stations, Bulletin No. 158, U. S. Dept. of Agriculture.

than private and partnership, 198,622 acres; other commercial enterprises, 73,440 acres; private and individual rice enterprises, 88,065 acres; private and partnership enterprises, 49,658 acres. By this classification 286,687 acres, or 63.6 per cent of the total irrigated area in 1909, is shown to have been in the rice belt. No lands were reported irrigated in Texas in 1909 by the United States Reclamation Service, United States Indian Service, Carey Act, or irrigation district enterprises.

There is nothing upon the subject of waters and water rights in the constitution of Texas.

§ 2042. **Criticism of the Texas laws.**—The State of Texas, although in the forefront as to most subjects, has not kept pace with her sister States upon the subjects of irrigation and water rights. This may be from the fact, as stated before, that the cultivation of crops by irrigation is not as necessary in Texas as in some of the other States. Although some of the laws upon the subject are admirable, others are inadequate and out of date, and then, again, there is a great deficiency of laws which should have been passed, but which do not appear in the statutes of the State. A State with the natural resources and the many streams as has Texas, should have years ago adopted the law of State control or the State administration of the waters flowing within its boundaries. There should be a State engineer, and a State board of irrigation or control.

The State has adopted the irrigation district law, but in the census of 1910 no acreage is reported as having been irrigated by that mode of enterprise.

The regulating of irrigation by the Commissioners' Court is peculiar to the laws of the State. However, this law seems to be giving satisfaction, especially as to regulating the distribution of the waters among consumers thereof.[1]

§ 2043. **Title to waters and right of appropriation and use of waters.**—There are no constitutional provisions of the State of Texas governing or regulating waters or water rights. By the Act of 1895 [1] the following was provided:

1 For regulating the mode of irrigation in commissioners' court, see Sec. 2048.

1 Laws, 1895, p. 25.

"The unappropriated waters of the ordinary flow or underflow of every running or flowing river or natural stream, and the storm or rain waters of every river or natural stream, canyon, ravine, depression, or watershed within those portions of the State of Texas in which, by reason of the insufficient rainfall or by reason of the irregularity of the rainfall, irrigation is beneficial for agricultural purposes, are hereby declared to be the property of the public, and may be acquired by appropriation for the uses and purposes and in the manner as hereinafter provided." [2]

By the Irrigation District Act of 1905 it is also provided:

"The use of all water required for the irrigation of the land of any district formed under the provisions of this law, together with the rights of way for canals and ditches, sites for reservoirs, and all other property required in fully carrying out the provisions of this law, is hereby declared to be a public use, subject to the regulation and control of the State in the manner as may be prescribed by law." [3]

"The storm or rain waters, as described in the preceding article, may be held or stored in dams, lakes, or reservoirs built and constructed by a person, corporation, or association of persons for irrigation, mining, milling, the construction of water works for cities and towns or stockraising, within those portions of Texas described in the foregoing article; and all such waters may be diverted by the person, corporation, or association of persons owning or controlling such dam, reservoir, or lake for irrigation, mining, milling, the construction of water works for cities and towns, and stockraising.[4]

"The ordinary flow or underflow of running water of every natural river or stream within those portions of Texas described in Article 4991 may be diverted from its natural channel for irrigation, mining, milling, the construction of water works for cities and towns, or stockraising: Provided, that such flow or underflow shall

Hudson, 85 Tex. 587, 22 S. W. Rep. 389; rev'd *Id.*, 22 S. W. Rep. 967; Hall v. Carter, 33 Tex. Civ. App. 230, 77 S. W. Rep. 19; Biggs v. Leffingwell, —— Tex. Civ. App. ——, 132 S. W. Rep. 902.

[3] Rev. Civil Stats. Tex., 1911, Art. 5088.

[4] Rev. Civil Stats. Tex., 1911, Art. 4992.

not be diverted to the prejudice of the rights of the riparian owner without his consent, except after the condemnation thereof in the manner as hereinafter provided.[5]

"The appropriation of water must be either for irrigation, mining, milling, the construction of water works for cities and towns, or stockraising.[6]

"As between appropriators, the first in time is the first in right."[7]

It is also provided that the owner whose land abuts on a running stream may use such water therefrom as may be necessary for domestic purposes. The remainder of the waters of rivers and streams can only be appropriated by the lawful appropriator.[8]

"All surplus water of a running stream not used or disposed of as provided in the preceding articles shall be conducted back to the stream from which it was taken through a ditch or canal constructed under the provisions of this chapter, or through a natural channel leading back to the stream."[9]

**§ 2044. The appropriation of water.**—"Any person, firm, association of persons, or corporation may acquire the right to and appropriate for irrigation purposes the unappropriated waters of the ordinary flow or underflow of every running or flowing river or natural stream, and the storm or rain water of every river or natural stream, canyon, ravine, depression, or watershed within those portions of the State referred to in Article 4991, by filing a sworn statement in writing, to be recorded as provided in Article 4996, declaring his or its intention of appropriation of such water." Said statement shall also show approximately the number of acres of land proposed to be irrigated; the name of such ditch or canal, the point at which the headgate will be situated; the size of the ditch in width and depth, and carrying capacity thereof in cubic feet per second of time; the name of the appropriator; the name of the stream, and other facts set forth by the statute.[1]

6 Rev. Civil Stats. Tex., 1911, Art. 4994.

7 Rev. Civil Stats. Tex., 1911, Art. 4995.

8 Rev. Civil Stats. Tex., 1911, Art. 5001.

9 Rev. Civil Stats. Tex., 1911, Art. 5005.

1 Rev. Civil Stats. Tex., 1911, Art. 4998.

"Within ninety days next after filing of said statement referred to in the foregoing articles the party or corporation claiming the right to appropriate the water shall begin actual construction of the proposed ditch, canal, dam, lake, or reservoir, and shall prosecute the work thereon diligently and continuously to completion.

" 'Completion,' as used in Article 4998, is hereby defined to be the conducting of the water in the main canal to the place of intended use." [2]

§ 2045. **Corporations and companies.**—"Corporations may be formed and chartered under the provisions of this chapter and of the general corporation laws of the State of Texas for the purpose of constructing, maintaining, and operating canals, ditches, flumes, feeders, laterals, reservoirs, dams, lakes, and wells, and of conducting and transferring water to all persons entitled to the same for irrigation, mining, milling, to cities and towns for water works, and for stockraising, and for the purpose of building storage reservoirs for the collection and storage water for the purposes before mentioned." All such corporations are given full power and authority to make contracts for the sale of permanent water rights and to have the same secured by liens on the land or otherwise, and to lease, rent, or otherwise dispose of the water controlled by such corporation for such time as may be agreed upon. "All persons who own or hold a possessory right or title to land adjoining or contiguous to any canal, ditch, flume, or lateral constructed and maintained under the provisions of this chapter, and who shall have secured a right to the use of water in said canal, ditch, flume, lateral, reservoir, dam, or lake, shall be entitled to be supplied from such canal, ditch, flume, lateral, dam, or lake with water for irrigation of such land, and for mining, milling, and stockraising, in accordance with the terms of his or their contract." [1]

It is further provided that the sale of a permanent water right shall be an easement to the land and pass with the title thereof.[2]

"Every canal corporation, for the purpose of irrigation, shall have power to cause such examination and survey for its proposed

2 Rev. Civil Stats. Tex., 1911, Arts. 4999, 5000.

1 Raywood etc. Co. v. Erp, —— Tex. ——, 146 S. W. Rep. 155.

2 Rev. Civil Stats. Tex., 1911, Art. 5002.

canal to be made as may be necessary to the selection of the most advantageous route, and for such purpose, by its officers, agents, or servants, to enter upon the land or waters of any person."[3]

"Every person, corporation, or association of persons which has heretofore constructed, or which may hereafter construct, any ditch, canal, dam, lake, or reservoir for the purpose of irrigation, and who shall lease or rent the water from said ditch, canal, dam, lake, or reservoir to any person or association of persons or corporation owning any lands subject to irrigation from any such ditch, canal, lake, dam, or reservoir, such person, corporation, or association of persons owning such ditch, canal, lake, dam, or reservoir shall have a preference lien, superior to every other lien, upon the crop or crops raised upon the land thus irrigated under such lease or contract."[4]

Any corporation organized under the above provisions for the purpose of irrigation shall have the power to acquire lands by voluntary donation or purchase or in payment of stock or water rights and to dispose of all such land and other property and to borrow money, issue bonds, and to mortgage all its property for the payment of any debts contracted for the same.[5]

§ 2046. **Ditches and canals and rights of way therefor.**—"Every person, corporation, or association of persons who have constructed, or may hereafter construct, any ditch, canal, reservoir, dam, or lake for the purposes named in this chapter, and taking the water from any natural stream, storage reservoir, dam, or lake, within ninety days after commencement of such construction, must file and cause to be recorded in the office of the county clerk of the county where the headgate of such ditch or canal may be situated, or to which said county may be attached for judicial purposes, in a well-bound book to be kept by said clerk for that purpose, a sworn statement in writing," showing approximately the number of acres of land that will be irrigated, the name of such ditch or canal, the point at which the headgate thereof is situated, the size of the ditch or canal, and carrying capacity thereof in cubic feet per second of time, the name

[3] Rev. Civil Stats. Tex., 1911, Art. 5003.

[4] Rev. Civil Stats. Tex., 1911, Art. 5009.

[5] Rev. Civil Stats. Tex., 1911, Art. 5010.

of the stream from which said water is taken, and other essential facts prescribed by the statute.[1]

"By compliance with preceding articles the claimant's right to the use of water relates back to the time when the work of excavation or construction was commenced on said ditch, canal, reservoir, dam, or lake; provided, that a failure to file such statement shall in nowise work a forfeiture of such heretofore acquired rights, nor prevent such claimants of such heretofore acquired rights from establishing such rights in the courts."[2]

All corporations and associations formed for the purpose of irrigation and other useful purposes involving the right to the use of water are given the right of way over the public lands of the State for the construction of the necessary works.[3]

Rights of way are also given across highways, "provided, that if any public road or highway or public bridges should be upon the ground necessary for the damsite, reservoir, or lake, it shall be the duty of the commissioners' court to change said road and to remove such bridges that the same may not interfere with the construction of the proposed dam, reservoir, or lake; provided, further, that the expense of making such change shall be paid by the person, firm, or corporation owning such damsite, lake, reservoir, or canal.[4]

"Unless such person, association of persons, or corporation shall fence their said ditch, canal, reservoir, dam, or lake and keep the same securely fenced, then there shall accrue in their favor no cause of action against owners of live stock for any trespass thereon.

"Such canal corporation, for the purpose of irrigation, shall have power to construct its canal across, along, or upon any stream of water."[5]

**§ 2047. Adjudication of existing rights.**—Under the law of Texas the adjudication of existing water rights between claimants under the doctrine of appropriation and between such claimants and those claiming the water by virtue of riparian ownership is entirely left to the courts under the equity procedure.

1 Rev. Civil Stats. Tex., 1911, Art. 4996.

2 Rev. Civil Stats. Tex., 1911, Art. 4997.

3 Rev. Civil Stats. Tex., 1911, Art. 5004.

4 Rev. Civil Stats. Tex., 1911, Art. 5006.

5 Rev. Civil Stats. Tex., 1911, Arts. 5007, 5008.

**§ 2048. Regulating the mode of irrigation in commissioners' courts.**—Texas has a law peculiar to itself, regulating the mode of the distribution of waters for irrigation, through the means of the "commissioners' court." This court consists of four commissioners of each county, together with the County Judge.[1]

Relative to the regulating of the mode of irrigation, it is provided:

"The commissioners' courts are authorized to order, regulate, and control the time, mode, and manner of erecting, repairing, cleaning, guarding, and protecting the dams, ditches, roads, and bridges belonging to any irrigation farms and property, and the fences or other like protection in and around such farms; provided, that such farms, dams, ditches, and fences be owned conjointly by two or more different persons; and, further provided, that the same be situated outside of a corporation having jurisdiction thereof.

"Said courts shall have power to establish all needful police regulations for the government and control of irrigation farms and property; and said courts may assess and collect fines for breaches of any regulations established by them or by the joint owners of such farms and property, or recognized by said court as consistent with ancient usage and the law of the State; said courts may order meetings of joint owners for the election of commissioners and other officers, and for the consideration of any of their other interests, and the said court may proceed and elect said officers, and may regulate the right of way, the stoppage and passage of the water, and the right distribution of the shares of said water; they may forbid the running of stock at large on the common farm; they may fine for taking water out of turn and for carelessness and wantonness in overflowing roads and neighboring lands, and generally they may do, or cause to be done, what they may consider just and needful or beneficial to the joint owners.

"If any owner of a suerte or subdivision lot in said farm shall fail or refuse to do or pay his proportion of labor and expense in and on any dam, ditches, fences, bridges, or other needful appurtenances to such irrigation farms, the commissioners' court may lease said suerte; provided, that such leasing shall be at public outcry, after ten or more days of due public notice, and to the persons

[1] For the organization, powers, and duties of said court, see Rev. Civil Stats. Tex., 1911, Arts. 2236-2282.

bidding the shortest term, not to exceed four years, who shall give good security to discharge faithfully all such charge and work.

"Upon the application of the owners of any suitable lands and water, and the assurance and proper security given to the county, if required by said court, that no injury will result to the public health, the commissioners' courts are authorized by decree to license and permit any such owners to proceed and dam the water, and to ditch, fence, and irrigate their lands; provided, that joint owners of all irrigation farms shall be liable for damages done to the public, or to any person, by reason of the overflow of such irrigation water; suit to be brought against the person occasioning the injury, or in such other way as may be sanctioned by said court."[2]

The right of eminent domain is granted under the provisions of the Act and the court given the power to proceed and assess the damages.

Where the health of the community may be injured by irrigation or the damming up of water, the commissioners' courts, after due and mature hearing and consideration, may decree the discontinuance, "and they shall proceed and break up and discontinue all such dams, ditches, and irrigation whether the same have been heretofore ever so long in existence or may hereafter be started."

In counties where the commissioners' courts may decree and adjudge that fences around immigration farms may be dispensed with, they may make all fair, equal, and proper regulations for the keeping up or herding of cattle and other stock for the security and protection of the crops and farms.[3]

**§ 2049. Irrigation district law.**—Texas has also adopted the irrigation district law, based largely upon the Wright Law of California, although according to the reports of the last census, there was no area irrigated under these districts.[1]

Relative to the organization of such districts it is provided:

"A majority in numbers of the holders of title, or evidence of title, to lands susceptible of irrigation from a common source and by the same system of works, such holders of title, or evidence of

[2] Rev. Civil Stats. Tex., 1911, Arts. 4984-4987.

[3] Rev. Civil Stats. Tex., 1911, Arts. 4988-4990.

[1] For the irrigation district Act, see Rev. Civil Stats. Tex., 1911, Arts. 5012-5107.

title, representing a majority in value of said land, according to the county assessment roll or rolls for the year last preceding, may propose the organization of an irrigation district under the provisions of this law."

A petition must be presented to the commissioners' court of the county [2] in which the lands within the proposed district or the greater portion thereof are situated, signed by the required number of holders of title, and representing the requisite majority in value of said lands, which petition shall set forth the facts in general as prescribed by the California law.[3] The commissioners' court must upon notice, hear said petition and grant or refuse the same. If granted, an election must be called and held in the usual manner. The other provisions of the Act relative to officers, general elections, the issue and sale of bonds, and taxation and assessments are largely the same as the California law.

It is provided that assessments must be made on all property in the district, in the following language: "The assessor must, between the first Monday in March and the first Monday in June in each year, assess all property in the district, to the persons who own, claim, have the possession or control thereof, at its full value. Any property which may have escaped the payment of assessment for any year shall, in addition to the assessment for the then current year, be assessed for such year with the same effect and with the same penalties as are provided for such current year." [4]

It is also provided that the boundaries of the district may be changed by including or excluding certain territory.[5]

Relative to the regulation and use of water it is provided:

"The use of all water required for the irrigation of the land of any district formed under the provisions of this law, together with the rights of way for canals and ditches, sites for reservoirs, and all other property required in fully carrying out the provisions of this law, is hereby declared to be a public use, subject to the regulation and control of the State, in the manner as may be prescribed by law." [6]

2 For commissioners' courts, see Sec. 2048.

3 For California irrigation district laws, see Sec. 1755.

For a full discussion upon irrigation districts, see Chap. 70, Secs. 1386-1432.

4 Rev. Civil Stats. Tex., 1911, Art. 5054.

5 Rev. Civil Stats. Tex., 1911, Arts. 5065-5087.

6 Rev. Civil Stats. Tex., 1911, Art. 5088.

It is also provided that the water shall be apportioned ratably to each land owner upon the basis of the ratio which the last assessment of such owner for district purposes within said district bears to the whole sum assessed upon said district. In times of scarcity water must be apportioned according to the amounts necessary to the different localities as the water commissioners may in their judgment think best. Navigation must not be impaired through any of the projects under the Act. The remaining provisions of the Act are practically the same as those of California.[7]

**§ 2050. Drainage and drainage districts.**—Under the proper proceedings had, the commissioners' court is authorized to construct drains for the drainage of the lands within their respective counties.[1]

There are also provisions for the organization of drainage districts included in one or more counties, and also one or more of such districts in each county.[2] These Acts largely follow the California Reclamation District Act.[3]

**§ 2051. Acts in aid of the National Reclamation Act.**—In aid of the National Reclamation Act it is provided:

"Where, in the examination, survey, or construction of any irrigation or reclamation project under the provisions of the Act of Congress, approved June 17, 1902, thirty-second statutes, 388, known as the Reclamation Act, it shall be found advisable or necessary to irrigate or reclaim lands within limits of the State of Texas, the Secretary of the Interior is authorized to make all necessary examinations and surveys for, and to locate and construct irrigation or reclamation works within said State, and to perform any and all acts necessary to carry into effect the provisions of the Reclamation Act as to such lands, subject to all the provisions, limitations, charges, terms, and conditions of the said Reclamation Act."[1]

7 Rev. Civil Stats. Tex., 1911, Arts. 5089-5107.

1 Rev. Civil Stats. Tex., 1911, Arts. 2477-2541.

2 Rev. Civil Stats. Tex., 1911, Arts. 2542-2625.

3 See Sec. 1757; Wharton Drainage Dist. v. Higbee, —— Tex. Civ. App. ——, 149 S. W. Rep. 381; Parker v. Harris, —— Tex. Civ. App. ——, 148 S. W. Rep. 351; Spalding v. Haley, —— Tex. Civ. App. ——, 142 S. W. Rep. 172.

1 Rev. Civil Stats. Tex., 1911, Art. 5011.

**§ 2052. Duties of the commissioner of agriculture relative to irrigation.**—By the Act of 1909,[1] it is provided: "It shall be the duty of the commissioner of agriculture to prepare and make public reports on the present system of irrigation now in operation in this State, the cost of maintenance and operation of the same, the character and kind of irrigation plants which result in the greater saving to the users of water, the class and character of water contracts entered into by the various canal companies; he shall also inquire into the reasonableness and fairness of rates being charged for water by the various canal companies in this State, and, from time to time, shall make public the result of his inquiries; he shall collect and publish statistics and other information regarding the irrigation of rice and other crops as may be of benefit in developing and collaborating a more efficient system of laws safeguarding and defining the rights of users and sellers of water for irrigating purposes; and he shall make up and file an annual report on same with such recommendations as he may deem beneficial to the industry, which report shall be filed with the Governor and transmitted to the legislature.

"The commissioner of agriculture is hereby empowered and authorized to employ a competent engineer and expert, possessing a practical knowledge of the application of irrigation to the raising of rice and other crops, for the purpose of assisting him in performing the duties required of him in the preceding article."

**§ 2053. Riparian rights in Texas.**—Riparian rights are recognized and protected to a certain extent in the State of Texas, although in the arid portion of the State, these rights are not as strictly enforced against appropriators for irrigation as they are enforced in the eastern and more humid portions of the State. There is a different rule governing the arid and humid portions of the State.[1]

1 Rev. Civil Stats. Tex., 1911, Arts. 4448, 4449.

1 See Barrett v. Metcalf, 12 Tex. Civ. App. 247, 33 S. W. Rep. 758; Watkins L. Co. v. Clements, 98 Tex. 578, 86 S. W. Rep. 733, 70 L. R. A. 964, 107 Am. St. Rep. 673; Santa Rosa v. Pecos etc. Co., —— Tex. Civ. App. ——, 92 S. W. Rep. 1014; Cape v. Thompson, 21 Tex. Civ. App. 681, 53 S. W. Rep. 368; Baker v. Brown, 55 Tex. 377; Mud Creek Irr. Dist. v. Vivian, 74 Tex. 170, 11 S. W. Rep. 1078; Rhodes v. Whitehead, 27 Tex.

It will also be noticed that the laws of Texas under the authorities cited, give the upper riparian proprietor a sort of preference right to the use of water, especially if the inception of his right was prior in time.

304, 84 Am. Dec. 631; Fulton v. Frandolig, 63 Tex. 330; McGhee etc. Co. v. Hudson, 85 Tex. 587, 22 S. W. Rep. 398; Haas v. Chusard, 17 Tex. 588.

# CHAPTER 102.

## UTAH.

§ 2054. Particular features of the State.
§ 2055. Irrigation in the State.
§ 2056. Criticism of the Utah laws.

§ 2072. Provisions in aid of the National Reclamation Act.
§ 2073. Pollution of waters.
§ 2074. Criminal statutes.
§ 2075. Riparian rights in Utah.

**§ 2054. Particular features of the State.**—We must take into consideration in this connection the fact that Utah in its natural state and condition was considered but little less than a desert. Its streams capable of being utilized are in general small; and its valleys, hemmed in as they are by lofty ranges of the Rocky Mountains which draw the moisture from the clouds, are naturally most arid. The northern and western parts of the State lie within the Great Basin of the continent from which no water escapes except by evaporation. In general, the Great Basin has an elevation of over 4200 to 6000 feet above the sea level and is surrounded by mountains attaining altitudes of over 8000 to 13,000 feet. It is a broad area of arid surface, containing many independent drainage districts. Within its territories are a number of mountain ridges of no great length, having a general northerly direction. Between these ranges are smooth valleys, the floors of which are built of the debris washed down from the surrounding mountains.

The eastern portion of the State is, in general, better watered, its principal streams being Green River and its tributaries. This is a portion of the drainage basin of the Colorado River and is usually distinguished by lofty plateaus and deep canyons, with the water itself many hundred feet below the surrounding country. The Wasatch Range of mountains runs in a general north and south direction through the center of the northern half of the State, wringing from the clouds the moisture, thus preventing any great precipitation in the valleys. But in the winter, the moisture in the shape of snow, being stored up in the mountains until needed, renders the farming communities in the valleys very prosperous. The small streams issuing from this great range have cut through the mountains and as a general rule pour their waters toward the west, ultimately flowing into the Great Salt Lake. This lake is but the remnant of a great body of fresh water which occupied all the valleys of western Utah, and from whence came the rich sediment which renders the broad bottom lands so fertile. The valleys situated at the base of this range of mountains, although exceedingly arid in climate, receive many streams which carry a large part of the precipitation which has fallen upon the highest summits, and are thus most favorably situated for cheap and effective irrigation. The valleys farther to the west, however, though equally fertile, do not receive streams as large or permanent from the fact that the mountains bounding them are of less altitude.[1]

§ 2055. **Irrigation in the State.**—A peculiar interest attaches to the Great Basin in Utah from the fact that it is the location of the first irrigation enterprise in this country, by English speaking peo-

[1] See Seepage Water in Northern Utah, by Samuel Fortier, Water Supply and Irrigation Paper No. 7, U. S. Geological Survey; Surface Water Supply of the Great Basin Drainage, by E. C. La Rue, Thomas Grieve, Jr., and Henry Thurtell, District Hydrographers, 1908, Water Supply Paper No. 212, U. S. Geological Survey; The Colorado River Basin, by W. B. Freeman and R. H. Bolster, 1910-1911, Water Supply Papers Nos. 249 and 269, U. S. Geological Survey; The Great Basin, by E. C. La Rue and F. F. Henshaw, 1910-1911, Water Supply Papers Nos. 250 and 270, 1910-1911, U. S. Geological Survey; Ground Water in Juab, Millard, and Iron Counties, Utah, by Oscar Meinzer, 1911, Water Supply Paper No. 277, U. S. Geological Survey; Underground Water in Sanpete and Central Sevier Counties, Utah, by G. B. Richardson, Water Supply Paper No. 199, U. S. Geological Survey.

ple. In 1847, the Mormon pioneers turned the waters of City Creek over the arid soil upon what is now Salt Lake City. In an earlier portion of this work, we have related something of the history of irrigation by the Mormon settlers.[1]

Utah also occupies the central position in the arid region and, therefore, the details of irrigation therein possess more than ordinary interest, from the fact that they represent conditions intermediate between those of the north and south, the east and the west. Besides this, the irrigation methods and systems were developed by men who, unaided by capital or previous experience, introduced methods of their own, and, taught by repeated failures, finally achieved success. The country being arid in the highest degree, the value of the land is dependent wholly upon the amount of water to which it is entitled, the most fertile areas being almost valueless without water. In the early days, Utah offered a striking contrast to the rest of the arid region in the details of the customs of the distribution of waters according to priority of rights and also in the regulation and control by the irrigator. Prior to the year 1900, with few exceptions, the canals and systems of ditches had been built by farmers and were controlled by them in every minute detail. The majority of the water disputes between the Mormons were settled in an arbitrary manner by the bishops' courts.

The point has long since been reached in the State, when all the easily available water has been appropriated and the increase of the cultivated area has been due to the storage of the flood waters and a more careful utilization of the available supply. In nearly every valley in Utah there is now more land under cultivation than there is water to mature the crops in all years. The principle was early established among the farmers of the then Territory, that those who first made use of the water should ever afterward be entitled to a sufficient amount to irrigate the area of land originally cultivated by them; and the later comer, whenever scarcity occurred, could not take the water until those enjoying prior rights had satisfied their needs, the later comer being the first to be deprived and those settling before him losing their water supply in succession in the converse order of their acquisition as the flow of the stream became less and less.[2]

1 See Secs. 243-246.

2 See Duty of Water on Big Cottonwood Creek, Utah, by Special Agent R. C. Gemmell, State Engineer, Office

According to the Census Report for 1910 the total number of farms irrigated in the State of Utah in 1909 was 19,709, against 17,924 in 1899, an increase of 1,785, or 10 per cent.

The total area irrigated in 1909 was 999,410 acres, against 629,293 acres in 1899, an increase of 370,117 acres, or 58.8 per cent. The total acreage which all enterprises were capable of supplying with water in 1910 was 1,250,240 acres. The acreage included in projects either completed or under construction in 1910 was 1,947,625 acres. This indicates the area which will be available within the next few years for the extension of irrigation, and shows that the area irrigated can be almost doubled without the construction of additional works.

The acreage irrigated in 1909, classified by the type of enterprises, is reported as follows: Under United States Indian Service, 11,520 acres; under the Carey Act, 5000 acres; under co-operative enterprises, 681,760 acres; under commercial enterprises, 70,227 acres, and under individual and partnership enterprises, 222,448 acres.

§ 2056. **Criticism of the Utah laws.**—The strong feature of the Utah statutory law governing the appropriation and use of the waters within the State is that of State administrative control. This law is based somewhat upon the Wyoming and somewhat upon the Colorado statutes. The board of control, or State irrigation board, and State divisions are entirely dispensed with, and correspondingly greater powers are conferred upon the State engineer. The State engineer of Utah has greater powers in these matters than has the State engineer of any other State outside of that of Nevada. Whether or not the concentration of such powers in any one man, involving as it does the greatest industry of the State, is a wise provision still remains a serious question. In the hands of a wise, competent, honest, and skillful engineer upon whom these powers have been conferred it may work to the best interests of all

of Experiment Stations, Bulletin No. 86, U. S. Dept. of Agriculture; Water Right Problems of Bear River, by Clarence T. Johnson and Joseph A. Breckons, 1899, Office of Experiment Stations, Bulletin No. 70, U. S. Dept. of Agriculture; Irrigation Under Canals from the Logan River, by George L. Swendsen, Professor of Irrigation Engineering, Utah Agricultural College. See, also, Water Administration in Utah, by R. C. Gemmell, State Engineer, Office of Experiment Stations, Bulletin No. 104, U. S. Dept. of Agriculture.

concerned; but, upon the other hand, where the situation is to the contrary in any one particular, all sorts of havoc and complications may be the result. The State of Utah has been especially fortunate in securing the right kind of men for this important position, but there has been trouble in some of the other States in this respect.[1]

The matter of the adjudication of existing rights in the State is properly left to the courts. But to date practically all adjudications have been by actions in equity brought for that purpose. The provisions relative to the statutory adjudication of rights has been practically inoperative from the fact of the failure of the legislature to provide the necessary expenses for these actions. But by the Act of January 31, 1911,[2] providing for the "adjudication of water rights fund," it is expected that hereafter the statutory procedure will be largely followed.[3]

The provision of the statute relative to the appropriation of water that in case the State engineer is convinced that an application to appropriate water for a designated purpose is not for the most beneficial use, he shall file such application with his findings with the District Court, and on the filing of such statement such court shall have the exclusive jurisdiction to determine the merits of the question and instruct the engineer to approve or reject the application, is decidedly unique to the Utah statute.[4] As to how this provision will work, it is too early as yet to determine.

The legislature has been derelict in its duty in the failure to enact an artesian well law, especially as relating to the suppression of the wasting of water from such wells. In the meantime there are many of such wells running continually day and night, summer and winter, and no attempt made to suppress their flow during times when their waters are not needed.

**§ 2057. State constitutional provisions.**—Upon the subject of the sale of water rights and water works the constitution of the State, by Article XI, Section 6, provides:

"No municipal corporation shall, directly or indirectly, lease, sell,

1 See Secs. 1343, 1344.

2 Laws, 1911, p. 3.

3 For this procedure, see Sec. 2062.

4 See Comp. Laws, 1907, Sec. 1288x10, as amended, Laws, 1909, p. 86, and Laws, 1911, p. 143. See, also, Sec. 2061.

alien, or dispose of any water works, water rights, or sources of water supply now or hereafter to be owned or controlled by it; but all such water works, water rights, and sources of water supply now owned or hereafter to be acquired by any municipal corporation shall be preserved, maintained, and operated by it for supplying its inhabitants with water at reasonable charges: Provided, that nothing herein contained shall be construed to prevent any such municipal corporation from exchanging water rights or sources of water supply for other water rights or sources of water supply of equal value, and to be devoted in like manner to the public supply of its inhabitants." [1]

By Article XVII, Section I, existing rights to the use of water was confirmed in the following language:

"All existing rights to the use of any of the waters in this State for any useful or beneficial purpose are hereby recognized and confirmed." [2]

In the declaration of rights, Article I, Section 22, it is provided: "Private property shall not be taken or damaged for public use without just compensation." [3]

[1] A conditional exchange of water rights by a city is held not to be a violation of this section. State *ex rel.* Ellerbeck v. Salt Lake City, 29 Utah 361, 81 Pac. Rep. 273.

It was held that, although a city was forbidden to lease or sell its waterworks, yet, where a so-called lease was made and acted upon for a number of years by both parties, at a great expenditure by the lessee, the contract would not be set aside by the court. Ogden City v. Bear Lake etc. Co., 28 Utah 25, 76 Pac. Rep. 1069; but see same case, 16 Utah 440, 52 Pac. Rep. 697.

The above provision of the constitution does not prohibit the acquisition of a secondary water right against a municipality. Salt Lake City v. Salt Lake City etc. Co., 25 Utah 441, 71 Pac. Rep. 1069, 61 L. R. A. 648.

Neither does the section forbid the acquisition by a power company of the right to connect its flume with the water canal of a city for the purpose of discharging water into the same. Salt Lake City etc. Co. v. Salt Lake City, 25 Utah 441, 71 Pac. Rep. 1069, 61 L. R. A. 648.

[2] "It will be thus observed that the organic law of this State has put it beyond the power of any party to lawfully go upon a stream of water in which he has acquired no right, and interfere with existing rights, or destroy or cut off the source of supply of such stream because it happens to be a pond or lake." Cole v. Richards Irr. Co., 27 Utah 205, 75 Pac. Rep. 376, 101 Am. St. Rep. 962.

[3] For a municipality to assume control of a private water system and to levy taxes on land of owners thereof, to maintain it, is to deprive them of property without due process of law. Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520; Bartholomew v.

Upon the subject of taxation of irrigation works, the Utah constitution provides in Article 13, Section 3, as follows: "Ditches, canals, reservoirs, pipes, and flumes owned by such individuals or corporations, or the individual members thereof, shall not be separately taxed as long as they shall be owned and used exclusively for such purpose."

§ 2058. **Title to water.**—Upon the subject of the title to waters within the State of Utah, the statutes provide:

"The water of all streams and other sources in this State, whether flowing above or under the ground, in known or defined channels, is hereby declared to be the property of the public, subject to all existing rights to the use thereof." [1]

§ 2059. **The right to appropriate waters—Abandonment.**—By express statute the right to appropriate water within the State of Utah is given in the following language:

"Rights to the use of the unappropriated water in the State may be acquired by appropriation in the manner hereinafter provided and not otherwise. The appropriation must be for some beneficial or useful purpose, and as between appropriators, the one first in time shall be first in right; provided, that when a use designated

Fayette Irr. Co., 31 Utah 1, 86 Pac. Rep. 481.

Section 3597, providing that plaintiff may enter into possession of property in condemnation proceedings upon filing sufficient bond is not in conflict with the provisions of the above section. Salt Lake City etc. Co. v. Salt Lake City, 24 Utah 249, 67 Pac. Rep. 672.

Property is taken for a public use within the provision of the constitution declaring that private property shall not be taken for public use without just compensation, when the taking is for a use that will promote the public interest, and will tend to develop the resources of the State, as is the case of a right of way through an irrigation ditch of another claim by a single individual, for the purpose of conducting water to irrigate his own land. Nash v. Clark, 27 Utah 158, 75 Pac. Rep. 371, 1 L. R. A., N. S., 208, 101 Am. St. Rep. 953; affirmed, 198 U. S. 361, 49 L. Ed. 1085, 25 Sup. Ct. Rep. 676.

For a city to repudiate a contract of leasing its water system after lessee had expended large sums of money thereon, would be the taking of private property for a public use without just compensation. Ogden City v. Bear Lake etc. Co., 28 Utah 25, 76 Pac. Rep. 1069.

1 Compiled Laws of Utah, 1907, Sec. 1288x18.

The future references in this chapter will be to the above unless otherwise indicated.

by an application to appropriate any of the unappropriated waters of the State would materially interfere with a more beneficial use of such water, then the application shall be dealt with as provided in Section 1288x10."[1]

The right of the appropriation of waters for all beneficial uses has always been given since the first settlement of the territory now included in the State by the Mormon pioneers in 1847. The right was first acquired by custom, afterward by the many statutes passed by the legislatures of the Territory and State which preceded the above Act, and the right has always been upheld by the courts.[2]

1 Comp. Laws, 1907, Sec. 1288x5, as amended, Laws, 1911, p. 143.

Under the statutory appropriation it is provided that the priority shall be determined by the date of receiving the application in the State engineer's office. Comp. Law, 1907, except as provided in Sec. 1288x16; Sec. 1288x17, as amended, Laws, 1909, p. 90.

2 See Stowell v. Johnson, 7 Utah 215, 26 Pac. Rep. 290; Cole v. Richards etc. Co., 27 Utah 205, 75 Pac. Rep. 376, 101 Am. St. Rep. 962.

For the rights as between prior and subsequent appropriators, see Salt Lake City v. Salt Lake City etc. Co., 24 Utah 249, 67 Pac. Rep. 672, 25 Utah 441, 71 Pac. Rep. 1069, 61 L. R. A. 648; Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634; Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520; Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111; Crane v. Winsor, 2 Utah 248; Nephi Irr. Co. v. Vickers, 29 Utah 315, 81 Pac. Rep. 144; Howcroft v. Union Irr. Co., 25 Utah 311, 71 Pac. Rep. 487.

It was held that, under Section 2339, Revised Statutes of the United States, a vested right to any of the unappropriated waters might be acquired by the appropriation of the same, for the operation of machinery, irrigation, or other useful purposes, and to construct reasonable dams and reservoirs, so far as necessary for the utilization of the same, but that the defendant was not authorized to oust the plaintiff, who had first appropriated and taken possession of the land in dispute for its right of way. Rio Grande W. R. Co. v. Telluride etc. Co., 16 Utah 125, 51 Pac. Rep. 146; appeal dismissed, 175 U. S. 639, 44 L. Ed. 305, 20 Sup. Ct. Rep. 245; see *Id.*, 187 U. S. 569, 47 L. Ed. 307, 23 Sup. Ct. Rep. 338.

Known underground waters of a stream, flowing in well defined channels, are subject to appropriation, and can not thereafter be diverted by the wrongful act of another. Whitmore v. Utah Fuel Co., 26 Utah 488, 73 Pac. Rep. 764.

Springs belong to the owner of the land, where no prior adverse rights have been acquired. Willow Creek Irr. Co. v. Michaelson, 21 Utah 248, 60 Pac. Rep. 943, 51 L. R. A. 280, 81 Am. St. Rep. 687; Orient M. Co. v. Freckleton, 27 Utah 125, 74 Pac. Rep. 652.

As to rights in percolating waters, see Sullivan v. Northern Spy M. Co., 11 Utah 438, 40 Pac. Rep. 709, 30 L. R. A. 186; Crescent M. Co. v. Silver King M. Co., 17 Utah 444, 54 Pac. Rep. 244, 70 Am. St. Rep. 810; Her-

The extent of the right is defined by statute in the following language: "Beneficial use shall be the basis, the measure, and the limit of all rights to the use of water in this State."[3]

Also, by the Act approved March 20, 1911,[4] it was provided that: "Rights to the use of water shall be limited and restricted to so much thereof as may be necessarily used for irrigation or other beneficial purposes, irrespective of the carrying capacity of the ditch, and all the balance of the water not so appropriated shall be allowed to run in the natural stream from which such ditch draws its supply of water, and shall not be considered as having been appropriated thereby."

The loss of the right to the use of water by abandonment is prescribed as follows: "When the appropriator or his successor in interest abandons or ceases to use water for a period of seven years, the right ceases, and thereupon such water reverts to the public, and may be again appropriated as provided in this title; but questions of abandonment shall be questions of fact, and shall be determined as are other questions of fact."[5] And the same period of

riman Irr. Co. v. Butterfield M. Co., 19 Utah 453, 57 Pac. Rep. 537, 51 L. R. A. 930; Herriman Irr. Co. v. Keel, 25 Utah 96, 69 Pac. Rep. 719; Willow Creek Irr. Co. v. Michaelson, 21 Utah 248, 60 Pac. Rep. 943, 51 L. R. A. 280, 81 Am. St. Rep. 687; Howcroft v. Union Irr. Co., 25 Utah 311, 71 Pac. Rep. 487. But, see Garnes v. Rollins, —— Utah ——, 125 Pac. Rep. 867.

[3] Comp. Laws, 1907, Sec. 1288x20.

That the right of a prior appropriator is fixed by the extent of his actual application of the water to a beneficial use, see Becker v. Marble Creek Irr. Co., 15 Utah 225, 49 Pac. Rep. 892, 1119; Munroe v. Ivie, 2 Utah 535; Manning v. Fife, 17 Utah 232, 54 Pac. Rep. 111; Elliot v. Whitmore, 23 Utah 342, 65 Pac. Rep. 70, 90 Am. St. Rep. 700; Stowell v. Johnson, 7 Utah 215, 26 Pac. Rep. 290; Hague v. Nephi Irr. Co., 16 Utah 421, 52 Pac. Rep. 765, 41 L. R. A. 311, 67 Am. St. Rep. 634; Salina Creek Irr. Co. v. Salina Stock Co., 7 Utah 456, 27 Pac. Rep. 578; Nephi Irr. Co. v. Vickers, 29 Utah 315, 81 Pac. Rep. 144; Sowards v. Meagher, 37 Utah 212, 108 Pac. Rep. 1112.

A party, to acquire a right to the use of unappropriated waters for irrigation, is required to take, divert, and use the waters. Coray v. Holbrook, —— Utah ——, 121 Pac. Rep. 572.

[4] Laws, 1911, p. 149.

[5] Comp. Laws, 1907, Sec. 1288x23.

Upon questions of abandonment of water rights, see Promotory Ranch Co. v. Argile, 28 Utah 398, 79 Pac. Rep. 47; Becker v. Marble Creek Irr. Co., 15 Utah 225, 49 Pac. Rep. 892, 1119; Herriman v. Keel, 25 Utah 96, 69 Pac. Rep. 719; Gill v. Malan, 29 Utah 431, 82 Pac. Rep. 471.

Upon the question of abandonment of ditches, see Lehi Irr. Co. v. Moyle, 4 Utah 327, 9 Pac. Rep. 867; Morrison v. Winn, 17 Utah 484, 54 Pac. Rep. 761; Stalling v. Ferrin, 7 Utah 477, 27 Pac. Rep. 686.

the adverse user of seven years is required in order to acquire a right by prescription.[6] But the adverse use of the water must have been accompanied with all of the essential elements to make out an adverse possession.[7]

§ 2060. **Administrative officers.**—Following a sort of a combination of the laws of Colorado and Wyoming, the legislature of the State of Utah has adopted the system of State control or State administration for the purpose of governing and controlling the waters within its boundaries, divided the State into water districts, and provided for water commissioners having jurisdiction over the same, and at the head of which system is the State engineer.[1]

*The State Engineer.*—The statute provides for the appointment of the State engineer by the Governor, to be confirmed by the senate. He shall hold his office for a term of four years, and draws a salary of $3000. "He shall have the general supervision of the waters of the State and of their measurement, apportionment, and appropriation," and over the district commissioners. He is also given the power to make and publish such rules and regulations as he may deem necessary from time to time to fully carry out the provisions of the law, and to secure an equitable and fair apportionment of the water according to the respective rights of the ap-

6 That the right to the use of water may be acquired by an adverse user of the same for seven years or more, see Springville City v. Fullmer, 7 Utah 450, 27 Pac. Rep. 577; Lehi Irr. Co. v. Moyle, 4 Utah 327, 9 Pac. Rep. 867; Holman v. Pleasant Grove, 8 Utah 78, 30 Pac. Rep. 72.

7 Smith v. North Canyon W. Co., 16 Utah 194, 52 Pac. Rep. 283; Center Creek Irr. v. Lindsay, 21 Utah 192, 60 Pac. Rep. 559; Minnie Maud Res. Co. v. Grames, 29 Utah 225, 81 Pac. Rep. 693; Fisher v. Bountiful City, 21 Utah 29, 59 Pac. Rep. 520; Wasatch Irr. Co. v. Fulton, 23 Utah 466, 65 Pac. Rep. 205; Monroe v. Ivie, 2 Utah 535; Bartholomew v. Fayette Irr. Co., 31 Utah 1, 86 Pac. Rep. 481, 120 Am. St. Rep. 912.

The use of land for a ditch does not become adverse without a claim of right. Yeager v. Woodruff, 17 Utah 361, 53 Pac. Rep. 1045.

1 It will be noted that at first the State was divided into water divisions and these divisions into districts, over which there were provided superintendents and supervisors. But by the Act of March 20, 1911, these provisions were repealed and authority given to the State engineer to divide the State into water districts only, over which there may be appointed a water commissioner. See Act of March 20, 1911, Laws, 1911, p. 145, repealing Secs. 1286-1288x4, Comp. Laws, 1907.

propriators. "No person shall be appointed to the office of State engineer who has not such theoretical knowledge and practical experience and skill as shall fit him for the position." He shall keep his office at the State Capitol. He shall take an oath of office and give a bond in the penal sum of $5000. He must make a biennial report to the Governor on or before the 31st day of December preceding the regular session of the legislature, and in such reports he shall make such suggestions as to the amendment of existing laws or the enactment of new laws as his information and experience shall suggest. He shall keep on file in his office full and proper records of his work, which shall be the property of the State, and which shall be opened to the public for inspection. He shall make a complete hydrographic survey of each river system and water source in the State. He shall have the general supervision of the appropriation of water. He may co-operate with the agencies of the National Government engaged in similar work within the State for the purpose of interchanging information and avoiding the unnecessary duplication of work.[2]

Before commencing the hydrographic survey of any river system the State engineer must give notice by publication. He is given the authority to inspect all dams exceeding five feet in height, and must approve the plans of the same before construction may be commenced on new dams, and order repairs on those constructed, if found defective. He may also inspect ditches and canals and order the parties to make any alteration which he considers necessary for the security of such works, the safety of persons, or the protection of property. He is also given the power to bring actions to adjudicate existing rights.

In addition to the duties above prescribed by the Act of March 20, 1911,[3] it was also provided that the State engineer shall divide the State into water districts, said districts to be so constituted as to secure the best protection to the claimants for water, and the most economical supervision on the part of the State; said districts not to be created until a necessity therefor shall arise.[4]

[2] Comp. Laws, 1907, Secs. 1261-1266.

[3] Laws, 1911, p. 145, Sec. 1.

[4] For fees of the State engineer, see Comp. Laws, 1907, Sec. 970x, as amended, Laws, 1911, p. 5.

*Water Commissioners.*—The Act of March 20, 1911,[5] provides that there shall be appointed by the Governor one water commissioner for each water district, who shall be selected from persons recommended by the State engineer, each commissioner to hold office until his successor is appointed and qualified. He must give a bond in the sum of $1000. "Water commissioners provided for shall receive such compensation as shall be fixed by the State engineer, and the same shall be determined with reference to the extent and character of the service performed by each, to be paid by the county in the interest of which the work is performed."

The water commissioners are made *ex officio* officers of the court, and they are given the powers and duties to divide the water according to decrees, or according to priority; they may employ assistants when necessary; they may make arrests for the violation of the water laws; they have superintendency of headgates and measuring devices; and they must make their reports to the State engineer.[6]

§ 2061. **The appropriation of water.**—Although the majority of the existing water rights in the State of Utah were acquired by the old methods of appropriation by a notice, and by the application of the water to some beneficial use or purpose,[1] since the Act of 1903 [2] appropriations must be made by application to the State engineer, and in accordance with the usual procedure for that purpose as adopted by those States wherein the law of State control or State administration is in force.[3]

The application for this purpose must be in the usual form,[4] and if it is for irrigation it must show, in addition, the total area and description of the land proposed to be irrigated; if it is for the

2 Laws, 1903, p. 98.

3 For the appropriation of water under the laws of State control, see Secs. 1349-1353.

See, also, Comp. Laws, 1907, Secs. 1288x6-1288x17, as amended by Laws, 1909, p. 84, and by Laws, 1911, pp. 3, 143.

4 For all forms for this and other purposes in connection with the appropriation and use of waters in Utah, send to the State engineer, Salt Lake City, Utah.

development of power, it must also show the number, size, and kind of wheels to be employed, the head, the extent of power to be produced, and the purposes for which and the places where it is to be used, and where the water is to be returned to the natural stream; if the proposed use is for mining, it must also show the name of the mine and where situated, the nature of the material mined, and where the water is to be returned to the natural stream. The storage of water by means of a reservoir shall be regarded as a diversion, and the points of diversion in such case shall be deemed to include the point where the water is taken from the stream and the center of the impounding dam or reservoir. In this case the lands to be inundated by the reservoir must also be described.[5] The application must be filed by the State engineer, but if found to be incorrect an opportunity is given for correction; if, however, this is not done, no further proceedings shall be had thereon. Notice of the application must then be published.[6] Any one interested may, at any time within thirty days after the completion of the publication of the notice, file with the State engineer a written protest against the granting of the application, stating the reasons therefor, which shall be duly considered by said engineer, who shall approve or reject said application.[7] It is made the duty of the State engineer "to approve all applications where the proposed use will not impair the value of existing rights, or will not interfere with the more beneficial use of said water"; provided, however, that an application made by a homesteader or other entryman, such water to be exclusively used upon the land of such person, may be approved without reference to prior conflict; "but the State engineer, upon information furnished by the State conservation commission,[8] or upon his own investigations, or by information in his possession to the effect that there is reason to believe that applications to appropriate water from any stream or other source of supply within the State will interfere with its more beneficial use for irrigation, domestic, culinary, stock, power, mining, or other purposes, it shall be the duty to withhold the approval or rejection of such application until he shall have investigated the matter."

[5] Comp. Laws, 1907, Sec. 1288x6, as amended, Laws, 1909, p. 84.

[6] Comp. Laws, 1907, Secs. 1288x7, 1288x8, as amended by Laws, 1909, pp. 85, 86.

[7] Comp. Laws, 1907, Sec. 1288x9.

[8] See Sec. 2069.

The cost of such inquiry shall be paid by the applicant. "When the State engineer is convinced that an application to appropriate water for a designated purpose is not for the most beneficial use, he shall file the application, together with a statement of his findings, in the District Court in the county where the proposed appropriation is to be made." On the filing of such statement such court shall have exclusive jurisdiction to determine the merits of the case and instruct the engineer to approve or reject such application. But where there is no unappropriated water in the proposed source of supply, or where the proposed use will conflict with prior applications or existing rights, it shall be the duty of the State engineer to reject such application.[9]

The approval or rejection of an application shall be endorsed thereon, and the application so endorsed shall be returned to the applicant. If it is approved, the applicant may proceed with the construction of his works to perfect the proposed appropriation; if it is rejected, no further steps must be taken so long as such rejection shall continue in force. Before the approval or rejection the State engineer may require further information as to the financial ability of the applicant to carry out the proposed work.[10]

In his endorsement of approval on any application the State engineer shall require that actual construction work must begin within six months from the date of the approval, and shall state the time within which it must be completed, not exceeding five years from said date; [11] and in case the application is for irrigation, shall state the time within which water shall be applied to a beneficial use, not exceeding four years in addition thereto. An appeal from the decision of the engineer may be had to the district Court.[12]

The construction of the works shall be diligently prosecuted to completion, and if one-fifth of the work is not completed within one-half the time allowed, as determined by the State engineer, he

[9] Comp. Laws, 1907, Sec. 1288x10, as amended, Laws, 1909, p. 86, and as further amended, Laws, 1911, p. 143.

[10] Comp. Laws, 1911, Secs. 1288x11, 1288x12.

[11] Pool v. Utah etc. Co., 36 Utah 508, 105 Pac. Rep. 289, where it was held that the time might be extended by the State engineer, although the application was made after the time first fixed by him had expired, as long as the time was kept within the limit fixed by the statute of five years.

[12] Comp. Laws, 1907, Sec. 1288x13, as amended, Laws, 1909, p. 86, and Laws, 1911, p. 3.

may accept and approve an application of the use of all or any of the waters included in said prior application, and upon notice the right to use such water under such application shall thereupon be forfeited. "Provided, that the State engineer shall have the power for good cause shown to extend the time for completion of construction or for application to beneficial use, but in no case shall extensions of time be made that would place the date of proof of completion of construction and proof of beneficial use more than fourteen years from the date of approval, except that the State engineer shall allow extensions of time during which work was prevented by the operation of law beyond the power of said applicant to avoid." [13]

Any applicant or protestant who is dissatisfied with the action of the State engineer may bring an action in the District Court; or in case "a decision of the State engineer is involved," shall have sixty days to appeal therefrom to the said court. In either case no further action must be taken by the engineer until said action is finally decided.[14]

Proof of the completion of the works must be made to the satisfaction of the State engineer, and maps and plats filed of the same, upon which the engineer shall issue his certificate of completion, after which proof of the application of the water to a beneficial use must be made and the certificate of the appropriation issued, which certificate must contain a full description of the right.[15]

"The priority number of an appropriation shall be determined by the date of receiving the written application in the State engineer's office." Rights claimed under applications may be transferred or assigned.[16]

§ 2062. **The adjudication of existing rights.**—The adjudication of existing water rights in the State of Utah is left entirely to the courts, where the power properly belongs. This adjudication may

13 Comp. Laws, 1907, Sec. 1288x13, as amended by Laws, 1909, p. 86, and Laws, 1911, p. 4.

14 Comp. Laws, 1907, Sec. 1288x14, as amended by Laws, 1909, p. 87, and Laws, 1911, p. 4.

16 Comp. Laws, 1907, Sec. 1288x17, as amended, Laws, 1909, p. 90.

be by the regular proceedings in equity [1] or it may be by the procedure prescribed by the statute.[2]

The statutory proceedings are as follows: When the State engineer has completed the hydrographic survey of any stream system or water source, he shall file a statement with the clerk of the District Court of the county in which the same is situated, or if the system extends into more than one county, the statement shall be filed in any county which embraces any part of such system "that the State engineer shall select as most convenient for the water users of the system or source." The said statement shall set forth the fact of the completion of such survey, the names and addresses of all persons, corporations, and associations using water of said system, so far as known, and shall contain such other facts and information as the State engineer may deem necessary. "On the filing of such statement the District Court in the county where the same is filed shall have exclusive jurisdiction to determine all water rights on the river system or water source, in accordance with the provisions of this title." [3] Within thirty days after the filing of such statement the clerk of the court must give public notice that all persons claiming the right to the use of any of the water of such river system must file a written statement of their claims, which notice shall be published as prescribed; and the clerk must also mail by registered letter to each of the persons, corporations, or associations whose names and addresses are given by the State engineer a copy of such notice, and a blank form on which said claimant shall present in writing all particulars relating to the appropriation of the water of said river system to which he lays claim.

Each claimant shall, within six months after the first publication as above, file in the office of the clerk his verified statement, setting forth the full particulars of his claim, as in the statute prescribed. If the water claimed to have been appropriated is used for irrigation, in addition he must set forth the area of land irrigated the first and each subsequent year; the total area at present irrigated, and its full description and the kind of crops raised. If the water claimed is for the development of power, in addition he must show

1 For the adjudication of rights in equity, see Chap. 78, Secs. 1530-1566.

2 For the statutory adjudication of rights, see Chap. 79, Secs. 1567-1584. See, also, Comp. Laws, 1907, Secs. 1271-1285, as the latter section was amended by Laws, 1911, p. 2.

3 Comp. Laws, 1907, Sec. 1271.

the number, size, and kind of water wheels employed; the head under which each wheel is operated; the extent of power produced, and the purposes for which and the places where it is used, and the point where the water is returned to the stream. If the water claimed to have been appropriated is used for mining, the statement shall show, in addition, the name of the mine and the mining district in which it is situated, the nature of the material mined, and the place where the water is returned to the natural channel of the stream. Within sixty days after the expiration of the six months allowed for filing statements the State engineer shall tabulate the facts contained in the different statements filed; a copy of such tabulation shall be filed with the clerk of the court, and also with the county recorder of each county which embraces any part of such river system.[4] The failure of any claimant to make a statement of his claim forever bars and estops him from thereafter asserting any claim to the water; provided, that any claimant upon whom no other service of notice was had other than by publication in the newspaper may apply to the Court for the permission to file his statement after the time therefor has expired, and the Court or Judge thereof may extend the time for filing, not exceeding one year from the first publication of said notice; but the applicant must also give notice by publication to the other claimants.[5] The statements filed by the claimants shall stand in the place of pleadings, and issue be made thereon.[6]

At the expiration of six months after the first publication the Court may appoint a referee or referees, not exceeding three, to take testimony and determine the rights of the respective parties, or the judge may hear the case himself. "The referee or referees, before proceeding to hear any testimony, must be sworn well and truly to hear and determine the facts and issues referred to them, and true findings render according to the evidence."[7] After a reference the referee has the power to allow amendments to any statements or pleadings, as the Court might do.[8]

After at least fifteen days' notice the Court, referee, or referees must take all the testimony presented in the case, and the maps

[4] Comp. Laws, 1907, Secs. 1272, 1273.

[6] Comp. Laws, 1907, Sec. 1277.

[7] Comp. Laws, 1907, Secs. 1275, 1276.

[8] Comp. Laws, 1907, Sec. 1278.

and record in the State engineer's office are admissible as evidence. If the referee is a claimant, all testimony pertaining to his claim shall be taken by the Court; and if the district judge is a claimant, he shall file his statement in the District Court of the adjoining district, and a copy of the statement in the District Court of his own county. In such case the Court of the adjoining district shall receive and act upon the referee's report and enter decree in the matter.[9]

Any parties interested may contest the rights of any other party. "On the completion of the evidence, the referee or referees shall state in writing the facts found by him or them as to each claim submitted and the conclusions of law in relation thereto, separately, and shall report the same, with a form of decree, to the Court, and said Court may review said report and enter decree thereon or set aside, alter, or modify the same and enter decree thereon so altered or modified." The effect of the decree in such an action is that it shall determine and establish the rights of the several claimants to the use of the water of said river system, and it must give full details relative thereto. The decree may be appealed from to the District Court.[10]

Upon the final determination of the case a certificate must be issued to each claimant, setting forth the substance of the decree, which certificate must be recorded in the office of the county recorder of the proper county, and a copy thereof filed in the office of the State engineer.[11]

Although the above Act was originally passed in 1903, it has not proven effective for the reason that no allowance for the expenses of the district judges, referees, or stenographers was provided. But by the Act of January 31, 1911,[12] a fund known as "adjudication of water rights fund" was provided which shall be a permanent fund and which shall be used only for the payment of expenses in the enforcement of the Act. It was also provided that the Court, at the time of the entry of final judgment, shall adjudge and determine the proportionate amount of such costs of adjudication, to be paid by each of the parties to said action, and that the respective

9 Comp. Laws, 1907, Sec. 1285, as amended by Laws, 1911, p. 2.

sums so apportioned are declared to be a lien upon the lands and water rights of said parties, to be assessed and collected as taxes, and the sums so collected to be remitted to the State Treasurer, and to be placed by him in the "adjudication of water rights fund."

Upon the question of the protection of water rights and for damages for injuries, it is provided:

"In any action hereafter commenced for the protection of rights acquired to water under the laws of this State, the plaintiff may make any or all persons who have diverted water from the same stream or source parties to such action, and the Court may in one judgment settle the relative priorities and rights of all the parties to such action. When damages are claimed for the wrongful diversion of water in any such action, the same may be assessed and apportioned by the jury in their verdict, or by the Court, if the case is tried without a jury, and judgment thereon entered for or against one or more of several plaintiffs, or for or against one or more of several defendants, and may determine the ultimate rights of the parties between themselves. In any action concerning joint water rights or joint rights in water ditches, unless partition of the same is asked by the parties to the action, the Court shall hear and determine such controversy as if the same were several as well as joint." [13]

**§ 2063. Ditches and canals, and condemnation of rights of way therefor.**—Substantial headgates and measuring devices must be constructed by the owners of ditches and canals, and of such pattern as the State engineer or water commissioner shall approve.[1] The ditches and canals must also be kept in repair, so as to prevent the waste of water or damage to the property of others.[2] Bridges must also be constructed and kept in repair by the owners of the works.[3] Each person, association, or corporation is liable for the proportion-

[3] Comp. Laws, 1907, Sec. 1288x29.

ate expense of maintaining, operating, and controlling their works where used in common.[4]

The place of diversion of water may be changed, provided it does not impair vested rights, upon application and a permit by the State engineer.[5]

"Any appropriated water may be turned into the channel of any natural stream, or into a reservoir constructed across the bed of any natural stream, and commingled with its waters and then be taken out, either above or below the point where emptied into the channel, but in so doing the original water in such stream or reservoir must not be diminished in quantity or deteriorated in quality."[6]

Upon the subject of the exercise of the right of eminent domain for ditches and canals, the State of Utah has taken an advanced position. The statute provides, by the Act of 1903,[7] as follows: "The use of water for beneficial purposes, as provided in this title, is hereby declared to be a public use. Any person, corporation, or association shall have the right of way across and upon public, private, and corporate lands, or other right of way, for the construction, maintenance, repair, and use of all necessary reservoirs, dams, water gates, canals, ditches, flumes, tunnels, or other means of securing, storing, and conveying water for irrigation or for any necessary public use, or for drainage, upon payment of just compensation therefor, but such right of way shall in all cases be exercised in a manner not to unnecessarily impair the practical use of any other right of way, highway, or public or private road, nor to unnecessarily injure any public or private property. Such right may be acquired in the manner provided by law for the taking of private property for public use.

"When any person, corporation, or association desires to convey water for irrigation or for any other beneficial purpose, and there is a canal or ditch already constructed that can be enlarged to con-

7 Laws, 1905, p. 103.

vey the required quantity of water, then such person, corporation, or association, or the owner or owners of the land through which a new canal or ditch would have to be constructed to convey the quantity of water necessary, shall have the right to enlarge said ditch or canal or ditch already constructed, by compensating the owner of the canal or ditch to be enlarged for the damage, if any, caused by said enlargement; provided, that said enlargement shall be done at any time from the first day of October to the first day of March, or at any time that may be agreed upon with the owner of said ditch or canal." [8]

In an action brought by a single individual to condemn a right of way for the purpose of conducting water to his own land, the above statute was upheld, both by the Supreme Court of the State and also by the Supreme Court of the United States.[9]

**§ 2064. Distribution of water.**—Upon the subject of the distribution of water, it is provided: That appropriators shall have priority among themselves according to the dates of their respective appropriations, so that each appropriator shall be entitled to receive the whole supply to which his certificate entitles him before any subsequent appropriator shall have any right; "provided, that whenever the natural flow of any stream shall have receded in volume in the annual low-water stage, then the rights of all users to such flow at such stage shall be deemed equal as to priority, and the water, when at or below such stage, shall be apportioned *pro rata* among such users. But in times of scarcity, while priority of appropriation shall give the better rights as between those using water for the same purpose, the use for domestic purposes shall have pref-

There is no title against the Government in a person taking possession of public land for the purpose of procuring water or digging ditches for canals, without the performance of any work thereon. Bear Lake Irr. Co. v. Garland, 164 U. S. 1, 41 L. Ed. 327, 17 Sup. Ct. Rep. 7; affirming *Id.*, 9 Utah 350, 34 Pac. Rep. 363.

erence over use for all other purposes, and use for agricultural purposes shall have preference over use for any other purpose except domestic use."[1]

It is made the duty of the water commissioners of their respective water districts to regulate the distribution of the water among the various ditches and the users thereunder according to the rights of the respective parties, as the same are established by decrees or otherwise.[2]

§ 2065. **Reservoir land grant—Reservoir rights.**—By the enabling Act there was granted to the State of Utah, by the United States, "for the establishment of permanent water reservoirs for irrigating purposes, five hundred thousand acres" of the public lands.[1] To take advantage of the benefits of the grant it was provided by the State legislature, and there was thereby created a fund to be known as the reservoir land grant fund, said fund to consist of all moneys received from the sale of land selected under the grant for the establishment of permanent water reservoirs for irrigation purposes.[2] The State board of land commissioners is authorized and directed to select suitable sites for reservoirs and to cause the same to be constructed for the purpose of storing water to be supplied to the State and other lands.[3]

The right of eminent domain is granted for the purpose of constructing reservoirs.[4] Reservoirs constructed by private parties are subject to inspection by the State engineer, and if defective must be repaired by the owners.[5]

§ 2066. **Corporations and companies—Taxation of property.**—Corporations may be organized under the laws of Utah for the express purpose of irrigating the lands of its stockholders or for the purpose of selling or otherwise disposing of water rights to consumers.

Ditches, canals, and other works owned by such corporations, or

5 Comp. Laws, Secs. 1268, 1269.

by individuals, for the irrigation of the lands of such corporations or individuals shall not be separately taxed so long as they shall be owned and used exclusively for such purposes.[1] "And all private water corporations organized for culinary purposes, and furnishing water exclusively to members of such corporations, and all canal and irrigation corporations engaged exclusively in furnishing water to or for lands owned by the members thereof, all water users' associations organized to comply with the rules of the United States Reclamation Service," are exempted from the payment of the annual license tax.[2] Another notable exception is made in favor of irrigation corporations, and that is that they may purchase or subscribe for the capital stock of any other similar corporation when the same is permitted by the articles of incorporation.[3]

§ 2067. **General provisions—Standard of measurement—Transfer of rights.**—"The standard unit of measurement of the flow of water shall be the discharge of one cubic foot per second of time, which shall be known as the second foot; and the standard unit of measurement of volume of water shall be the acre-foot, being the amount of water upon an acre covered one foot deep, equivalent to 43,560 cubic feet."[1]

"A right to the use of water appurtenant to the land shall pass to the grantee of such land, and in cases where such right has been exercised in irrigating different parcels of land at different times, such right shall pass to the grantee of any parcel of land on which such right was exercised next preceding the time of the execution of any conveyance thereof, subject, however, in all cases to payment by the grantee of any such conveyance of all amounts unpaid on any assessment then due upon any such right; provided, that any such right to the use of water, or any part thereof, may be reserved by the grantor in any such conveyance by making such

Water rights represented by shares of stock in a water company are personal property, and may be sold and transferred independent of any land. George v. Robison, 23 Utah 79, 63 Pac. Rep. 819; Snyder v. Murdock, 20 Utah 419, 59 Pac. Rep. 91.

[1] Comp. Laws, 1907, Sec. 1288x19.

reservation in express terms inserted in such conveyance, or may be separately conveyed.[2]

"Water rights shall be transferred by deeds in substantially the same manner as real estate, except when they are represented by shares of stock in a corporation, and such deeds shall be recorded in the office of the recorder of the county where the place of diversion of the water from its natural channel is situated. Every deed of water right so recorded shall, from the time of filing the same with the recorder for record, impart notice to all persons of the contents thereof, and subsequent purchasers, mortgagees, and lien holders shall be deemed to purchase and take with notice.[3]

"Every deed of water right within this State hereafter made, which shall not be recorded as provided in this title, shall be void as against any subsequent purchaser in good faith, and for a valuable consideration of the same water right or any portion thereof where his own deed shall be first duly recorded."[4]

All water appropriated for irrigation from works constructed or controlled by the United States shall be appurtenant to specified lands; provided, that if for any reason it should at any time become impracticable to use water beneficially or economically for the irrigation of any land, the said right may be severed from the land and simultaneously transferred, and become appurtenant to another tract.[5]

§ 2068. **Artesian wells.**—By the Act approved March 11, 1911,[1] the State board of land commissioners was authorized and directed to conduct experiments in sinking wells for the purpose of obtaining subterranean waters for culinary, domestic, and irrigation purposes on arid lands within the State. Such wells shall be located in locali-

ties where the surrounding land is adapted for "dry farming," and not more than two wells shall be located in any one county. Such wells may be driven on State or private land, and if on private land a right of way must be granted to the well by the owner. Whenever it is necessary to install machinery for lifting the water from such wells, the board is authorized and empowered to make such installation, and to make all rules necessary to lease said wells to the responsible bidder who will agree to furnish the water to the users thereof at the lowest price per gallon for a period not to exceed five years.

It must be noted that the State of Utah has no law for the prevention of the waste of water from artesian wells.

§ 2069. **State conservation commission.**—By the Act approved March 22, 1909,[1] a commission to be known as the Utah State Conservation Commission was created, to consist of not less than three members, citizens of the State, over the age of 21 years, to serve without pay, and of which commission the Governor shall be chairman. It is made the duty of said commission, among other things, "to inquire whether the waters of any stream or other source of water supply situated within the State can be wholly utilized for irrigation on lands lying under that source of supply, and if not, whether such waters can be used for purposes other than irrigation which are more beneficial to the public good."[2] It is also made the duty to place before the legislative and executive departments of the United States, including the National Reclamation Service, data and facts showing the great value of the arid lands in Utah when subjected to irrigation, and facts and information for the guidance of the legislative and executive departments of the United States in establishing dams, reservoirs, and irrigation systems for the reclamation of arid lands in the State.

§ 2070. **Irrigation district law.**—As we stated in a previous section, the early Territory of Utah adopted a crude irrigation district law, but this law not proving satisfactory, it was afterward repealed. However, the Territory of Utah had the honor of having adopted the first irrigation district law many years before the district

1 Laws, 1909, Chap. 103, p. 224, Secs. 1-6, as amended, Laws, 1911, p. 270.

2 Laws, 1909, p. 224, Sec. 3, as amended, Laws, 1911, p. 270.

law of California or the "Wright Act" was enacted by the legislature of that State.[1] It was not until the Act approved March 22, 1909,[2] that the legislature of Utah enacted an irrigation district law, the principal features of which are based upon the "Wright Act," as the same was afterward amended and adjudicated by the legislature and court of California.[3]

The Act provides that whenever a majority of the land owners in any district desire to provide for the irrigation of the same, upon petition to the board of county commissioners setting forth the complete facts, and "signed by a majority of the land owners within said proposed district, and who shall also be the owners in the aggregate of a majority of the whole number of acres belonging to the land owners within the said proposed district, and accompanied by a bond in double the probable cost for organization, it is made the duty of the board of commissioners to define the boundaries of the said proposed district, not including therein any land which will not be benefited by the proposed system. The commissioners by a further order shall call an election to determine whether such district shall be organized, and for the election of its board of directors.[4] At such election and all elections held under the provisions of the Act, all persons shall be entitled to vote who are land owners of agricultural lands within said district, and corporations so owning lands shall be considered persons.[5] The board of directors, after organization, is given the usual powers to acquire property, to make contracts, to sue and be sued.[6] The board is also authorized to call an election for the issuance of bonds.[7] It is also made the duty of the board of directors, on or before the first day of September of each year, to determine the amount of money required to

meet the maintenance, operating, and current expenses for the ensuing year, and to certify the same to the county commissioners. The assessment, levy and collection of this amount is made the duty of the regular county officers; "provided, that in no case shall any land be taxed for irrigation purposes under this Act which from any natural cause can not be irrigated or is incapable of cultivation.[8]

For the construction of the works bids may be taken by the board and contracts let and claims paid by warrant therefor. "The work shall be done under the direction and to the satisfaction of the engineer in charge, and be approved by the board."[9] Rights of way are granted over all State lands, and the right of condemnation for the same for rights of way over private lands.[10] Tolls and charges may be made for the purpose of defraying expenses in addition to the assessments provided for as above.[11]

In the diversion of water vested rights must not be interfered with;[12] and in its distribution, in times of scarcity, it is made the duty of the board to distribute all the available water upon certain or alternate days to different localities, as they may in their judgment think best for the interests of all parties concerned.[13] Provisions are made for the changing of boundaries of districts, the exclusion of land, division, and dissolution of the districts;[14] also for the confirmation of all proceedings by the Court.[15]

**§ 2071. The Carey Act in Utah.**—Utah is one of the States to which the provisions of the Carey Act apply, and by Act of the legislature it has provided for the acceptance of the provisions thereof and for operations thereunder.[1]

By the Act of Congress of April 4, 1910,[2] the provisions of the Act were extended to the Uinta Indian Reservation, the payment of $1.25 per acre to be paid to the Government for the lands so pat-

For the general discussion of the Carey Act, see Chap. 66, Secs. 1312-1336.

2 Public 114, Stats. of the U. S., 1909-1910, p. 285.

ented, for the benefit of the Indians. These provisions were also accepted by the State.[3]

The provisions of the Utah statute relative to the operation of the Act do not differ materially from the provisions of other States for the same purpose. The selection, management, and disposal of the land is vested in the State board of land commissioners.[4] In order to take advantage of the Act the usual application must be made by the contracting party to the board, and the same, after examination, must be accepted or rejected by the board.[5] In the contract with the constructing company, in the discretion of the board, it may provide that the sale to a settler of a tract of land with a permanent water right shall include a *pro rata* interest in the reservoir and irrigation works equal to the proportion of the tract of land purchased by him bears to the entire tract to be reclaimed by said system, and that upon full payment of the purchase price of the said land and water right, capital stock of the corporation representing such interest shall be transferred to such settler, if the said irrigation system shall be constructed by a corporation, or if by a person or company then such interest shall be conveyed to the settler.[6] All contracts must also state that the construction of the works shall begin within six months and shall be prosecuted diligently and continuously to completion, and that the cessation of work under a contract for a period of six months shall forfeit to the State all rights under said contract and the penal sum named in the bond, provided that no property or right which has vested in the contractor at the date of the contract shall be forfeited.[7]

Any citizen of the United States or a person having declared his intention, over the age of 21 years, may make application for the land. A contract for a water right must accompany the application, and also the sum of 25 cents per acre. The price fixed for the land is not to exceed $1 per acre, except where the same is located within the Uinta Indian Reservation, in which case it shall not exceed $2.25 per acre, and of which the board must pay the sum of $1.25 to the Government.[8] All money received by the board from

[8] Comp. Laws, 1907, Sec. 2382, as amended, Laws, 1911, p. 141.

the sale of such lands shall be deposited with the State Treasurer to the credit of the reclamation fund, and shall be available for the payment of the expenses of the board in carrying out the provisions of the Act.[9]

It is provided that the water rights to all lands acquired under the provisions of the Act shall attach to and become appurtenant to the land. The usual lien in favor of the contractor is provided for.[10]

**§ 2072. Provisions in aid of the National Reclamation Act.**—A right of way is granted for all ditches, tunnels, and telephone transmission lines constructed by the authority of the United States.[1] All lands belonging to the State under National reclamation projects must be sold in conformity to the farm units established by the Government; provided, that the area to be so irrigated shall be determined by due notice by the United States to the State board of land commissioners. After the withdrawal of lands by the United States no application for the purchase of State lands within the limits of such withdrawal shall be accepted, except under the conditions prescribed in the section. Any State lands needed by the United States for irrigation works shall be sold to the United States at the appraised value of such lands.[2]

It is made the duty of county recorders of counties in which water users' associations are organized in conformity with the requirements of the United States, under the Reclamation Act,[3] to provide record books of the articles of incorporation and stock subscriptions, and to use such books for recording the same; and the charges for the recording thereof shall be the actual cost of the labor performed, and not for the printed forms or records.[4]

**§ 2073. Pollution of waters.**—Upon the subject of public nuisances for the pollution of waters it is declared by the statute of Utah that: "Any person who shall either:

"1. Construct or maintain any corral, sheep-pen, stable, pig-pen, chicken-coop, or other offensive yard or outhouse where waste or

9 Comp. Laws, 1907, Sec. 2383, as amended, Laws, 1911, p. 142.

4 Comp. Laws, 1907, Sec. 632x3.

drainage therefrom shall flow directly into the waters of any stream, well, or spring of water used for domestic purposes; or,

"2. Deposit, pile, unload, or leave any manure heap, offensive rubbish, or carcass of any dead animal where waste or drainage therefrom will flow directly into any waters of any stream, well, or spring of water used for domestic purposes; or,

"3. Dip or wash any sheep in a stream in close proximity to any stream used by the inhabitants of any municipality; or,

"4. Construct or maintain any corral, yard, or vat to be used for the purpose of shearing or dipping sheep, within twelve miles of any municipality, where the refuse would naturally find its way into any stream used by the inhabitants of the municipality for domestic purposes; or,

"5. Establish and maintain any corral, camp, or bedding place for the purpose of keeping cattle, horses, sheep, or hogs within seven miles of any municipality, where the refuse or filth will naturally find its way into any stream used by the inhabitants, shall be guilty of a misdemeanor." [1]

The befouling of the waters of a canal from which a number of persons obtain water for irrigation, domestic and other purposes, so as to render it unfit for use, creates a public nuisance, and the right to maintain it can not be gained by prescription.[2]

**§ 2074. Criminal statutes.**—It is made a misdemeanor to in any way interfere with, injure, destroy, or remove any dam, headgate, weir, or other applicance; [1] so, also, the obstruction of any right of way for canals; [2] so, the failure to construct headgates and measuring devices; [3] so, the beginning of the construction of any dam over five feet in height before the plans shall have been submitted to and approved by the State engineer; [4] so, also, the refusal or neglect to comply with the requirements of the State engineer.[5]

Every person who wilfully and maliciously cuts, breaks, or de-

stroys any dam, canal, flume, aqueduct, levee, embankment, reservoir, or other structure erected to create hydraulic power, or to drain or reclaim swamp or marsh land, or to conduct water for mining, manufacturing, reclamation, or agricultural purposes, or for the supply of municipalities; or makes or causes to be made any aperture in such works, is punishable by a fine not exceeding $500, or by imprisonment in the State prison not exceeding two years, or both.[6]

The larceny of water is made a misdemeanor.[7]

§ 2075. **Riparian rights in Utah.**—The common law of riparian rights as to the use and flow of the waters of the natural streams has been abrogated in the State of Utah, both by statute and the decisions of the courts. By statute it is provided that: "Beneficial use shall be the basis, the measure, and the limit of all rights to the use of water in this State."[1] By Court decision in an early Territorial case it was held that: "Riparian rights have never been recognized in this Territory."[2]

§ 2096. Riparian rights in Washington.

**§ 2076. Particular features of the State.**—The State of Washington is somewhat similar to Oregon in climate and topography. The Cascade Range of mountains, which trends in a direction nearly north and south at a distance of about one hundred and fifty miles from the ocean, forms the most conspicuous feature of surface relief. This range divides the State into two great parts, differing greatly in climate, soil, rainfall, and, therefore, in agricultural possibilities. On the western side of the range the annual precipitation is heavy, and a dense forest covers the mountains and smaller hills, while upon the eastern side the rainfall is much less, the lands arid, and the natural vegetation comparatively scanty. The great plains of the Columbia form naturally a most striking feature of arid lands. These extend from the foothills of the Cascade Range eastward to the mountains of Idaho, and from the border of British Columbia southward across the State. The supply of water is large, and

found in the Columbia River and its numerous tributaries, the largest of which are the Snake and the Yakima Rivers. Here is found the famous Yakima Basin, a region that has attracted so much attention of late.

The climate of the State differs greatly in the different portions, depending upon the proximity to the sea and the altitude. In the Columbia River Basin the characteristics are dry, hot summers and moderately cold winters, with a snowfall varying from a few inches to several feet. At times both extremes of heat and cold are experienced. In the Yakima Valley, however, the temperature seldom ever goes to zero. The cropping season is long, and seldom disturbed by either late frosts in the spring or early frosts in the fall.

In addition to the supply of surface water in the State of Washington, there are many artesian basins in the State, from which a large quantity of water is supplied for all beneficial purposes.[1]

§ 2077. **Irrigation in the State.**—In many portions of the State of Washington crops can be raised without irrigation. In other portions of the State the climate is decidedly arid, and here, unless it may be by the scientific methods of dry farming, crops can not be raised without irrigation. Since the first edition of this work was published in 1894, there has been great development in the State of Washington in the reclamation of arid lands. It was somewhat late in coming, but since it started the progress has been wonderful. The first recorded claim to water in the Yakima Valley was dated February 21, and filed February 23, 1876. "In fact, the beginnings of the larger canal systems in operation today and the real awakening to the importance and possibilities of irrigation in this State date back only about fifteen or sixteen years."[1] One of the causes of this delay was the fact that it required a large amount of capital

1 See Reconnoissance in Southeastern Washington, by I. C. Russell, Water-Supply Paper No. 4, U. S. Geological Survey; Surface Water Supply of the North Pacific Coast Drainage, by J. C. Stevens, Robert Follansbee, and E. C. La Rue, district hydrographers, 1907, Water-Supply and Irrigation Paper No. 214, U. S. Geological Survey; Surface Water Supply of the United States, Part 12, North Pacific Coast, by J. C. Stevens, E. C. La Rue, and F. F. Henshaw, 1911, Water-Supply Paper No. 272, U. S. Geological Survey.

1 Irrigation in the Yakima Valley, Washington, by S. O. Jayne, 1907, Office of Experiment Stations, Bulletin No. 188, U. S. Dept. of Agriculture.

to construct the irrigation works of any considerable capacity. To accomplish the watering of the higher lands it has been necessary to build immense reservoirs for the impounding of the waters, to tunnel mountains in the construction of canals in order to obtain the proper grade, and to overcome many other obstacles requiring great engineering skill. Owing to these conditions the settlers naturally passed by these lands, and sought others where the water could be diverted at less expense. But during the last ten years, according to the last census report, there has been no dearth of settlers in that State, the increase of population for the last decade being 120 per cent.

According to the last report of the Bureau of Statistics and Immigration of the State of Washington, of 1910, it is said: "It is quite within the range of possibilities that the products of the irrigated lands of Washington will in time exceed in annual value the present output from our combined timber and cereal-producing areas. Inasmuch as the forest and grain products aggregate not less than $100,000,000 in value each year, this statement might, at first thought, be viewed as one born of undue enthusiasm. Regarded in the light of facts, however, it would appear conservative. Careful authorities have estimated that the total irrigable lands of the State exceed 2,000,000 acres in area, of which not more than 25 per cent have thus far been reclaimed. With this entire area productive, to secure a yield of $100,000,000 in value annually would require only an average of $50 per acre—an amount far below the returns from lands now irrigated, which have reached the producing stage."[2]

[2] For authorities upon the subject in the State of Washington, see Report of the Bureau of Statistics and Immigration of the State of Washington, 1910; Irrigation in the Yakima Valley, by S. O. Jayne, 1907, Office of Experiment Stations, Bulletin No. 188, U. S. Dept. of Agriculture; Irrigation Investigations in the Yakima Valley, under the direction of Elwood Mead, 1905, by O. L. Waller, *Id.*, Bulletin No. 158, Separate No. 4; Use of Water in Irrigation in Washington, by O. L. Waller, *Id.*, Bulletin No. 119, Separate No. 4; Use of Water in Irrigation in Yakima Valley, by O. L. Waller, 1900, *Id.*, Bulletin No. 104, Separate No. 4; A Reconnoissance in Southeastern Washington, by I. C. Russell, 1897, Water-Supply Paper No. 4, U. S. Geological Survey; Surface Water Supply of the North Pacific Coast Drainage, by J. C. Stevens, Robert Follansbee, and E. C. La Rue, 1907, Water-Supply Paper No. 214, U. S. Geological Survey.

According to the Census Report of 1910 the total number of farms irrigated in the State of Washington in 1909 was 7,405, against 3,513 in 1899, an increase of 3,892, or 110.8 per cent.

The total acreage in 1909 was 334,378 acres, against 135,470 acres in 1899, an increase of 198,908 acres, or 146.8 per cent. The total acreage which all enterprises were capable of supplying with water in 1910 amounted to 470,514 acres. The total acreage included in enterprises completed or under construction in 1910 was 817,032 acres.

The acreage irrigated in 1909, classified by type of enterprises, is given as follows: Under the United States Reclamation Service, 55,690 acres; under the United States Indian Service, 35,000 acres; under co-operative enterprises, 81,122 acres; under commercial enterprises, 66,911 acres, and under individual and partnership enterprises, 95,655 acres.

**§ 2078. Criticism of the Washington laws.**—As slow as the State of Washington has been to take up the work of irrigation and the reclamation of its arid lands, the legislature has been even slower in enacting efficient laws for the control, appropriation, and distribution of the waters within its boundaries. However, by the later legislation the most of the subjects pertaining to irrigation and the reclamation of lands have been covered, with the exception of provisions for the office of a State engineer, and for a strong centralized control of the waters and their appropriation and distribution. However, that such a water code is promised in the near future is seen by the fact that at the last session of the legislature one was partially considered and passed over for the consideration of the next legislature.[1]

[1] See Laws, 1911, p. 658, House Bill No. 284. Under the proposed law it is provided that: "Subject to existing rights, all waters within the State may be appropriated for beneficial use, as herein provided, and not otherwise." For the purposes of the Act the State is divided into two water divisions, over each of which there shall be appointed by the governor a superintendent, who must be a civil and hydraulic engineer. A State hydraulic engineer is also provided for, who, with the two division superintendents, constitute the board of water commissioners. The proposed proceedings for the determination of existing rights differ somewhat from that in other States adopting the law of State control. They are to be instituted by one or more claimants to any body of water by a petition to the board, whereupon it is made the duty of the superintendent of the di-

The methods of appropriation of water within the State may be considered antiquated in these times of water or irrigation codes. There is no central office where one can go to find out the stream flow of any stream in the State or the amount of the appropriations therefrom. The office of the State engineer should be created, if for no other purpose than that of making and keeping the records of stream measurements and the appropriations from streams. Future appropriations of water should also be made by application to the State engineer. But as far as the adjudication of existing rights are concerned, we believe that the right theory is followed in leaving it entirely to the courts. And it is to be hoped that the new water code, if adopted, will not depart from this system. The infringing upon the prerogative of the judiciary by creating a board of engineers to try and determine existing water rights, in the first instance, we never did believe in, and it does not always result in good. By giving such a board or the State engineer judicial authority it combines two departments of the government

vision to prepare a full statement and file the same with the Superior Court of the proper county, upon which the judge shall direct summons to be issued and served against all interested parties, who, before the return day, must file a statement of their claims to, or interest in the water involved. Upon the completion of the service of summons, the Court is to make an order referring said proceedings to the board as referees to take testimony, investigate the facts, and report its findings to the Court. A full hearing must then be had before the board, and its report filed with the clerk of the court. If no exceptions are filed to the report, the Court shall enter a decree adjudicating the rights of the parties in conformity with such report. If exceptions are filed, the Court shall proceed with the action as in a case in equity, and may, if necessary, refer the case back to the board for further evidence. In all cases the final decree is to be made by the Court. The final determination is by the Court, while the administrative officers take part in the proceedings in the nature of referees to take the testimony and report to the Court. The time of the Court is thus saved for other duties, and at the same time those in direct charge are given an important part in the proceedings.

The proposed method of appropriation of water follows the method of the other codes upon the subject. It must be made by an application to the State hydraulic engineer, and the usual proceedings are proposed. The distribution of the water is to be under the direct supervision of water masters, who in turn are to be under the direction of the superintendents of their respective divisions.

We have made a careful examination of the proposed bill and believe that it is one of the best that could be adopted under the circumstances and conditions existing in the State.

in one—the executive and judiciary—and thus avoids the check of one department upon the other. The power should be conferred upon the State engineer and the board to execute the laws in their departments, and it should remain in the courts to decide all questions, in the first instance, as to existing rights.

Outside of the needed water code, the State of Washington has adopted many laws which tend toward the general welfare of the State in the reclamation of its arid lands. The irrigation district law [2] provisions for the operation of the Carey Act,[3] and also provisions in aid of the National Reclamation Act,[4] have all been enacted; and although Washington was originally one of the States which adhered to the strict construction of the common law of riparian rights, provisions of the statute provide that these rights may be condemned, except as to the use of so much of the water as is actually needed and used by the riparian owner.[5]

**§ 2079. State constitutional provisions.**—Article XXI, Section 1, of the constitution of the State of Washington provides:

"The use of the waters of this State for irrigation, mining, and manufacturing purposes shall be deemed a public use." [1]

On the subject of eminent domain, the constitution provides in Article I, Section 16, as follows:

"Private property shall not be taken for private use except for private ways of necessity, and for drains, flumes, or ditches on or across the lands of others for agricultural, domestic, or sanitary purposes. No private property shall be taken or damaged for public or private use without just compensation having been first made, or paid into court for the owner, and no right of way shall be appropriated to the use of any corporation other than municipal until full compensation therefor be first made in money, or ascertained and paid into court for the owner, irrespective of any benefit from any improvement proposed by such corporation, which compensation shall be ascertained by a jury, unless a jury be waived, as in other civil cases in courts of record, in the manner prescribed by law.

Whenever an attempt is made to take private property for a use alleged to be public, the question whether the contemplated use be really public shall be a judicial question, and determined as such, without regard to any legislative assertion that the use is public." [2]

§ 2080. **Appropriation of water—Right and method of.**—Upon the subject of the right to appropriate water it is provided by statute:

"The right to the use of water in any lake, pond, or flowing spring in this State, or the right to the use of water flowing in any river, stream, or ravine of this State for irrigation, mining, or manufacturing purposes, or for supplying cities, towns, or villages with water, or for waterworks, may be acquired by appropriation, and as between appropriators, the first in time is the first in right.[1]

2 Long v. Billings, 7 Wash. 267, 34 Pac. Rep. 936; State *ex rel.* Galbraith v. Superior Court, 59 Wash. 621, 110 Pac. Rep. 429, 140 Am. St. Rep. 893.

Hanson, 40 Wash. 423, 82 Pac. Rep. 710; New Whatcom v. Fairhaven etc. Co., 24 Wash. 493, 64 Pac. Rep. 735, 54 L. R. A. 190; Madison v. Spokane etc. Co., 40 Wash. 414, 82 Pac. Rep. 718, 6 L. R. A., N. S., 257; Meyer v. Tacoma etc. Co., 8 Wash. 144, 35 Pac. Rep. 601; Shotwell v. Dodge, 8 Wash. 337, 36 Pac. Rep. 254; Sanders v. Wilson, 34 Wash. 659, 76 Pac. Rep. 280; Wintermute v. Tacoma etc. Co., 3 Wash. 727, 29 Pac. Rep. 444; Everett Water Co. v. Powers, 37 Wash. 143, 79 Pac. Rep. 617; Northport Brewing Co. v. Perrot, 22 Wash. 243, 60 Pac. Rep. 403; Spring Hill Irr. Co. v. Lake Irr. Co., 42 Wash. 379, 85 Pac. Rep. 6; Dickey v. Maddux, 48 Wash. 411, 93 Pac. Rep. 1090; Kendall v. Joyce, 48 Wash. 489, 93 Pac. Rep. 1091.

See, also, Avery v. Johnson, 59 Wash. 332, 109 Pac. Rep. 1028, 1 Water and Min. Cas. Ann. 531.

"Any person, corporation, or association of persons is entitled to take from the natural streams or lakes in this State water for the purpose of irrigation and mining, not theretofore appropriated or subject to rights existing at the time of the adoption of the constitution of this State, subject to the conditions and regulations imposed by law: Provided, that the use of water shall be deemed a public use, and subject to condemnation as may from time to time be provided for by the legislature of this State.[2]

"All persons who claim, own, or hold possessory right or title to any land, or parcel of land or mining claim within the boundaries of the State of Washington, when such lands, mining claims, or any part of the same are on the banks of any natural stream of water, shall be entitled to the use of any water of said stream not otherwise appropriated for the purposes of mining and irrigation, to the full extent of the soil for agricultural purposes.[3]

"Any person who owns or has the possessory right to lands in the vicinity of any natural stream or lake, not abutting such stream or lake, may take water from such stream or lake if there be any surplus or unappropriated water in such stream or lake."[4]

As the State of Washington has not yet adopted a water or irrigation code, as the same is known in many of the other States, especially where the laws of State control have been adopted, the method of the appropriation of water is based upon what might be termed the California method, which in turn is based upon the custom of the early miners in that State. A notice of appropriation must be posted by the appropriator in a conspicuous place at the point of

4 R. & B. Codes, Sec. 6331.

intended storage or diversion, stating therein: "1. That such appropriator claims the water lying, being, or flowing to the extent of one cubic foot per second of time, or some multiple or some fractional portion thereof; 2. The purpose for which said water is appropriated, and the place or places, as near as may be, of intended use; 3. The means by which it is intended to store or divert the same; 4. A copy of the notice must, within ten days after it is posted, be filed for record in the office of the county auditor in which it is posted."[5] The notice of appropriation must be recorded by the county auditor, who must keep a special book for that purpose.[6]

The appropriator must begin the construction of his works within three months after the posting of the notice, if it is intended to store the water, and within six months if it is intended to divert the water; "such works must be diligently and continuously prosecuted to completion, unless temporarily interrupted by the elements." By a strict compliance with these rules the rights relate back to the time the notice was posted, but a failure to comply therewith deprives the appropriator of the right to the use of the water as against a subsequent appropriator who faithfully complies with the same.[7]

The right to the use of water acquired by appropriation may be transferred, like other property, by deed.[8] And all vested rights to the use of water are recognized.[9] The use may be changed to any other purpose, and the right shall relate back to the original appropriation.[10]

Ditches constructed for the utilization of waste, seepage, or spring water are governed by the same laws as those constructed to utilize the waters from the natural streams: Provided that the person upon whose lands the seepage or spring waters first rise shall have

a prior right to such waters, if capable of being used upon his lands. Priority is given to the lands first so watered.[11]

§ 2081. **Ditches and canals and rights of way therefor.**—The right is given by the power of eminent domain to condemn rights of way for ditches, canals, or reservoirs, and special provisions provided therefor.[1] The right to use the natural streams as a means of conducting appropriated water is also allowed, due allowance being made for seepage and evaporation.[2] Pumps may be used to raise water from the natural sources of supply, and rights of way condemned to conduct the same to the place of use.[3] Rights of way are also granted from artesian wells.[4]

All persons, associations, and corporations entitled to the use of water, may condemn the right of way for their ditches and canals as specially provided.[5] But the rights so granted are only extended to ditches constructed for irrigation and for the working of mines.[6]

The proceedings as set forth in the statutes must be followed in actions for condemnation of rights of way. In the assessment of damages the value of the land so taken is the only issue.[7] The number of ditches on the same tract is limited, and the shortest route must be selected.[8] A right of way to extend the heads of ditches may be acquired in this manner.[9]

Every person, association, or corporation hereafter constructing any ditch or canal, shall, within 90 days after the construction, file with the county clerk of the proper county a map and statement showing the full details of such works.[10] The owners of all ditches and canals must keep the same in repair so as not to injure the prop-

erty of others.[11] Proper bridges must be constructed at the expense of the owners.[12] Headgates must be constructed and maintained.[13]

Owners of all ditches are made liable for damages resulting through neglect or refusal to comply with the provisions of the statute.[14]

By an Act of 1911,[15] it is provided that the owners of all ditches and canals must maintain the same in good condition, in order to deliver the water when needed.[16]

§ 2082. **The condemnation of riparian rights.**—Riparian rights as they exist at common law, being recognized as an obstruction to the full development of the State, provisions are made for the condemnation of the same, reserving the right of the riparian owner to the use of a sufficient quantity of water running by his land as he may actually need and use for irrigation of his lands. The right to condemn water rights is only extended to riparian rights, and is not intended to allow water to be taken from any person that is used by such person himself for irrigation, or that is needed for that purpose by any such person.[1] A petition must be filed in the superior court by any person seeking to condemn such rights, a day set for the hearing, and notice of the same published and posted. All persons owning such rights may appear and contest, and all persons failing to appear shall be deemed to have waived all rights of every kind whatsoever as against the petitioners. The court is to determine the rights of the respective parties and appoint appraisers to assess the value and report to the court. If objections are made to the report the court may order a reappraisement, or the court may set the case for trial and have the damages assessed by a jury.[2]

§ 2083. **Distribution and the apportionment of water—Standard of measurement.**—"If at any time any ditch from which water

Rep. 1032.

2 R. & B. Codes, Secs. 6368-6379.

is or shall be drawn for irrigation shall not be entitled to the full supply of water from the natural stream or lake which supplies the same with water actually received into and carried by such ditch shall be divided among all the consumers of water from such ditch, as well as the owners, shareholders, and stockholders thereof, as the parties purchasing water therefrom, and the parties taking water partly under and by virtue of holding shares and partly by purchasing the same, shall each receive his share *pro rata*, according to the amount he (in cases in which several consume water jointly) shall then be entitled to, so that owners and purchasers shall not suffer from a deficiency rising from the cause aforesaid, each in proportion to the amount of water which he should have received in case no such deficiency of water had occurred."[1] It is made unlawful for any person to take more than his share of the water from any source.[2]

For the purpose of the distribution of the water each county in the State is constituted an irrigation district, and for each of said districts a commissioner may be appointed by the board of county commissioners; provided, that twelve freeholders of any county who are irrigating lands in said county shall petition the board for such appointment. It is made the duty of the commissioner, when called upon by two or more owners of ditches in his district, to divide the water in the natural streams and lakes among the several ditches according to their respective rights. It is also made the duty of the commissioner to keep a register of priorities, taken from decrees of courts, "or where such priorities are not established by decrees, from any other legal source from which he can obtain the same, arranging and numbering the same in consecutive order, according to the dates of each respective right." In times of emergency, the commissioner may employ assistants.[3]

The unit of measure of water for irrigation, mining, milling, and mechanical purposes in this State shall be a cubic foot of water per second of time.[4]

§ 2084. **Rights of corporations.**—Corporations, associations, or firms may be organized for the purpose of constructing irrigation works and for the purpose of conducting water to the place of use, and for furnishing water to persons for the irrigation of their lands.[1] "Such corporation, person, association, or firm shall be deemed to be a public carrier, and shall at all times be subject to the regulations prescribed for said ditch by the legislature from time to time."[2]

Companies may also be organized for the purpose of supplying water to cities and towns and the inhabitants thereof.[3]

§ 2085. **Water rates.**—By the Act approved March 18, 1911,[1] providing for the creation of a Public Service Commission and fixing its powers and duties, the jurisdiction to fix water rates for all water or rights sold was placed with that commission. Such rates may be fixed by the commission upon its own motion or upon complaint of any party interested.

§ 2086. **Reservoir rights.**—Reservoirs may be constructed for the storage of waters; and the beds of natural streams used to conduct the water to the place of use, upon the appointment of a commissioner by the court upon petition, to regulate and adjust the several headgates of the ditches taking water from the streams. Such commissioner shall possess such theoretical and practical knowledge of the science of hydraulics as will enable him to supervise the construction and operation of measuring devices. Said commissioner is to be paid by the county for his services at a rate of not more than $7 per day for each day so employed.[1] Said commissioner may, with the consent of the superior court appointing him, employ assistants when necessary.

3 For the rights and powers of such companies, see R. & B. Codes, Secs. 9504-9510.

1 Laws, 1911, p. 538; see, also, pp. 545, 571.

1 R. & B. Codes, Secs. 6398-6401.

By the Act approved March 17, 1911,[2] the right was granted to all persons or companies to construct and maintain dams and works incident thereto over, upon, and across the beds of the rivers of the State, in connection with power and irrigation purposes. All dams and works must be completed within five years after the commencement of construction work upon the same. The right of navigation, or the vested rights of private parties must not be interfered with.

§ 2087. **Artesian wells—The regulation of the use from.**—It is made unlawful for any person, firm, corporation, or company having possession or control of any artesian well within the State to permit water to flow or escape therefrom between the first day of October in any year and the first day of April next ensuing; provided, that this shall only apply to sections and communities wherein the use of water for the purpose of irrigation is necessary or customary; and, provided further, that between the dates above mentioned the water from such wells may be taken for household, stock, and domestic purposes only. It is also made a duty to cap such wells between such dates; provided, however, it is lawful to insert a one-half inch stop and waste cock in the piping of such well and to use water therefrom for household, stock, or domestic purposes, but not otherwise.

Any person violating the above provisions is deemed guilty of a misdemeanor and upon conviction thereof shall be fined in any sum not exceeding $200 for each and every such offense, and the further sum of $200 for each ten days during which such violation shall continue.

And, again, whenever any person shall fail to comply with the above provisions, any person, firm, corporation, or company lawfully in the possession of land adjacent to or in the vicinity or neighborhood of such well and within five miles thereof, may enter upon the land upon which such well is situated, and cap such well, and shut in and secure the escape of the water therefrom, and the necessary expenses for so doing shall constitute a lien upon such well and a sufficient quantity of land surrounding the same for the convenient use and operation thereof, which lien may be foreclosed in a civil action.[1]

[2] Laws, 1911, p. 436.

[1] R. & B. Codes, Secs. 6404-6407; State v. Tiffany, 44 Wash. 602, 87 Pac. Rep. 932.

**§ 2088. The adjudication of existing rights.**—The adjudication of existing water rights, both as between ditches and canals, or as between the consumers thereunder, is left, where it should be, entirely with the courts. The proceedings for the adjudication of the rights to water as between the different ditches taking the water from the same source of supply are largely the same as those in Colorado. Any one or more persons, associations, or corporations interested as owners of any ditch or canal in any water district, may present to the superior court of any county a "motion, petition, or application" in writing, moving or praying the said court to adjudicate the priorities of right to the use of water between the several ditches or canals in the district. The court without unnecessary delay must set a day for such hearing. Notice of such hearing must be published and also posted, and served on every person, association, or corporation, having interests in such waters. The court at the time set must hear the evidence of the respective parties and the arguments of counsel, and make and cause to be entered a decree determining and establishing the several priorities, and the amount in cubic feet per second to which each ditch is entitled, and such other description as may be necessary. The court, in making the decree, shall number the several ditches and canals in the water district in consecutive order according to the priority of appropriation of water, as nearly as may be, and shall further number consecutively the several appropriations of water, beginning with the oldest, without respect to the ditches. Upon the payment of a reasonable fee, to be fixed by the court, a certificate, under the seal of the court, is issued to the ditch owners showing their respective rights; and the holder of such certificate shall exhibit the same to the water commissioner when he commences the exercise of his duties.[1]

**§ 2089. Improvement of streams for logging purposes.**—The industry of cutting timber and floating logs to market is an important one in the State of Washington. It is therefore provided:

"It shall be lawful for any person or company interested in logging to make such improvements on any stream used for logging

[1] R. & B. Codes, Secs. 6384-6397. See, also, for the statutory adjudication of water rights, Chap. 79, Secs. 1567-1584. For the adjudication of rights in Colorado, see Secs. 1790-1793.

within the State of Washington as may be necessary to carry on said logging business; that such improvements may consist in clearing out obstructions and straightening the channel by cutting across sand or gravel bars, and that side dams and sheer booms may be used in making such improvements."[1]

**§ 2090. Provisions in aid of the National Reclamation Act.**—The United States is granted the right to exercise the power of eminent domain to acquire the right to the use of any water, to acquire or extinguish any rights, and to acquire any lands or other property for the construction, operation, repairs, maintenance, or control of any plant, constructed under the provisions of the National Reclamation Act.[1] The right to the use of natural or artificial water courses for the conducting of water is also given. Whenever any official of the United States duly authorized shall notify the commissioner of public lands of the State pursuant to the provisions of the National Reclamation Act, that the United States intends to make examinations or surveys for the utilization of specified waters, the waters so described shall not be thereafter subject to appropriation under any law of the State for a period of one year. But such notice shall not affect vested rights. If the Secretary of the Interior shall, before the expiration of said period of one year, certify in writing that the project contemplated is feasible and that investigation will be made in detail, such waters shall not be subject to appropriation for a further period of three years; provided, that if the certificates are not filed within said periods, such waters are open to appropriation. Appropriation of such waters may be made by the United States in the same manner and to the same extent as though such appropriation is made by a private person. The title to the beds and shores of any navigable stream or lake utilized by the construction of such works shall vest in the United States, to the extent necessary for the maintenance, operation, and control of such reservoir or other irrigation works. Reservation of the State lands

necessary for such works and rights of way is made. It is also provided that the lands of the State under such a project shall be sold in conformity to the classification of the farm units by the United States.

Provisions are made for the incorporation of water users' associations, which associations shall be exempt from the payment of any incorporation and annual franchise tax.[2]

**§ 2091. Irrigation district law.**—The State of Washington is one of the States that has adopted the irrigation district law,[1] following that of California.[2]

It is provided that whenever fifty or a majority of holders of title or evidence of title holding land susceptible of one mode of irrigation from a common source, and by the same system of works, desire to provide for irrigation of the same, they may present a petition to the board of county commissioners of the county in which the lands or a greater portion thereof are situated for the organization of such a district.[3] The organization of the district and the election of the officers of the same must be proceeded with in conformity with the statute and similar to the proceedings in California, discussed in a previous portion of this work.[4] The usual powers are granted the board to make contracts and to make all necessary rules and regulations for the conduct of the affairs of the district not in conflict with the statute.[5] The board is also given the power to acquire, "either by purchase or condemnation, all lands and waters and other property necessary for the project."[6] Money may be borrowed and bonds issued for the payment of the same upon the usual election held for that purpose.[7] All of the real property within the district

may be assessed for the purposes of the district, and a certain amount of tax fixed and collected.[8] Navigation is protected and the vested rights of private property.[9] The boundaries of the district may be changed, and lands added,[10] or excluded.[11] The election precincts of such district may be also changed.[12] Special proceedings are provided for the confirmation of all acts by the court.[13] Proceedings are also provided for the disorganization of districts by the directors of the district,[14] and for the dissolution of districts by the county commissioners.[15]

§ 2092. **The Carey Act in Washington.**—The State of Washington comes within the Carey Act and has accepted the provisions thereof.[1] "The selection, management, and disposal of said lands shall be vested in the commissioner of public lands of the State of Washington,"[2] instead of some board as is the case in the most of the other States. In dealing with this official the usual proceedings must be had as has been discussed in the previous part of this work.[3] After notice that the land is open for settlement, any citizen of the United States, or any person having declared his intention (excepting married women not the heads of families) over the age of 21 years may make application. Said application must be accompanied with the usual water right contract and the sum of $1 per acre for the land applied for. The price of the land is fixed much higher than it is in most of the States, being fixed under each project at a uniform price of not less than $10 per acre, one-tenth to be paid at the time of entry and the remainder in nine equal instalments, with interest at 6 per cent per annum, provided that the settler may make full payment at any time upon or after making final proof. The final proof of reclamation, settlement, and occupation must be made within ten years from the date of the notice that

3 For full discussion of the Carey Act, see Chap. 67, Secs. 1312-1336.

the company is prepared to furnish him with the water.[4] The usual lien is given the contracting company for the payment of the water right.

§ 2093. **Reclamation of State lands by the State.**—The commissioner of the public lands of the State of Washington is also authorized and empowered to receive and file proposals and to enter into contracts for the construction of irrigation works to reclaim any and all lands granted to the State for any and all purposes and uses. The proceedings for the entering upon contracts are very much the same as those under the Carey Act in the State, but with the elimination of the interests of the General Government. Any person, company, or association, or corporation desiring to construct ditches or other irrigation works for the reclamation of said lands, may present a proposal for the same to the commissioner of public lands.[1] No contract shall be made which requires a greater time than three years for the construction of the works, and such additional time as may be granted by the commissioner not to exceed two years. The lands under such projects are sold for the price, and in accordance with the general law provided for the sale of State lands, and whenever an application is made to the commissioner for the purchase of any of the lands under a project, the application shall be accompanied by a sworn statement that the applicant is ready and willing to enter into a contract with the constructing company for his water right. And in case of the sale of the lands to such party the commissioner shall not issue a contract therefor until there shall have been filed in his office a certified copy of a contract for a perpetual water right with the contracting company. The same lien is given the constructing company upon the lands and water right for the payment of the water right, which lien may be foreclosed.[2]

§ 2094. **The pollution of waters.**—The pollution of a water supply is made a misdemeanor;[1] also any person who shall place or cause to be placed within any watershed from which any city or municipal corporation of any adjoining State obtains its water supply, any substance which, either by itself or in connection with other matter, will corrupt, pollute, or impair the quality of said water

2 R. & B. Codes, Secs. 6737, 6738.
1 R. & B. Codes, Secs. 2542, 2543.

supply, shall be deemed guilty of a misdemeanor and upon conviction thereof be punished by fine in any sum not exceeding $500.[2]

For the protection of the water furnished to the inhabitants of the towns and cities of the State of Washington such towns and cities are given jurisdiction over the water supply so used. The pollution of such waters is made a misdemeanor and subject to a fine of not exceeding $500. Where a nuisance is maintained, proceedings are provided for its abatement at the cost of the party so maintaining it. It is made the duty of the health officers to file complaints in the proper court against parties so polluting the waters; and an injunction may also be issued.[3]

§ 2095. **Criminal statutes.**—It is made a misdemeanor to steal water, or to tamper unlawfully with any irrigation appliances. The use of water through any such structure or structures, unlawfully taking water, is made *prima facie* evidence of the guilt of the person so taking it. The penalty for the above is a fine of not less than $25 nor more than $100, or to be imprisoned in the county jail not exceeding six months, or both.[1]

It also is made a misdemeanor for any person to take through the irrigating ditch more water than is absolutely necessary for his purposes.[2] Any person wilfully failing or refusing to place and keep in repair a necessary headgate and measuring box is guilty of a misdemeanor.[3] Permitting water to waste from artesian wells is a misdemeanor.[4]

§ 2096. **Riparian rights in Washington.**—Upon the subject of riparian rights, the statute of Washington provides:

"All persons who claim, own, or hold possessory right or title to any land or parcel of land or mining claim within the boundaries of the State of Washington, when such lands, mining claims, or any parts of the same are on the banks of any natural stream of water, shall be entitled to the use of any water of said stream not other-

3 R. & B. Codes, Secs. 6395, 6402.
4 R. & B. Codes, Secs. 6404-6407. See, also, for artesian wells, Sec. 2087.

wise appropriated for the purpose of mining and irrigation, to the full extent of the soil for agricultural purposes."

It will be seen from the above section that, while riparian rights to the flow of a natural stream are, in a measure, protected, the right of a riparian proprietor to the undiminished flow of a stream is limited to such a quantity of the water not otherwise appropriated, to the amount necessary for the irrigation of his lands. And the phrase "not otherwise appropriated" must be construed to refer to the amount remaining in the stream at the date of his settlement, and then only to the extent of his needs.[1] And, in this connection, it may be said that the right of a riparian proprietor to the undiminished flow of a stream past his lands, without use, as allowed under the old common law may be considered abrogated.

§ 2127. Prohibiting the pollution of waters.
§ 2128. Criminal statutes.
§ 2129. Riparian rights in the State.

§ 2097. **Particular features of the State.**—Wyoming lies within the Great Plains and Rocky Mountain regions. It has an area of 97,890 square miles, or 62,645,120 acres. The continental divide runs diagonally across the State, which with other minor divides forms the boundaries of four natural water divisions tributary to four different drainage basins. The North Platte, Powder, and Yellowstone Rivers are tributary to the Missouri River; the Snake River flows into the Columbia; the Bear River flows into Great Salt Lake, and the Green River flows into the Colorado River. The altitude of the State is high, and varies from 3,000 to 14,000 feet, with a mean altitude of about 6,000 feet, and probably less than one per cent is under 4,000 feet. About one-sixth of the area of the State is agricultural land, exclusive of grazing areas, while another sixth is reserved as National Forest reserves. Owing to the wide range of altitudes of the different portions of the State the climate is varied to a considerable extent. And the character of the agriculture and of the crops produced is governed by this fact. In all portions of the State pastoral industries flourish, and in many portions there is farming by irrigation. In many portions of the State where the altitude is from 3,000 to 4,500 feet above the sea level many varieties of both fruit and vegetables are grown successfully, as well as hay and grain. In some portions the soil is especially adapted to the raising of sugar beets, and the number of acres devoted to this crop is increasing annually. At the higher altitudes, however, killing frosts sometimes occur in May and September, so that the raising of hay or alfalfa, grain, and the hardy fruits only is attempted.

The water supply of the State is large, to be found in the rivers above named and their tributaries, and, besides this there are many perennial springs of notable size. The mean annual precipitation for the State, as obtained from the reports of the United States Weather Bureau for the past 37 years, is 14.17 inches.

§ 2098. **Irrigation in the State.**—Outside of the natural forage, and the crops that are raised under modern scientific methods of dry farming, very little is grown in the State of Wyoming without irrigation. As a general thing no dependence can be placed upon non-irrigated crops. Land in this State, as in the greater portion of the arid region, has little value for agricultural purposes without water. But the arable lands within the State being almost boundless, agri-

cultural development has been restrained in the past, and is now being restrained, only by the uncertainty of securing water for the irrigation of crops. Since the first edition of this work was written, twenty years ago, the irrigation development in this State has rapidly progressed. According to the secretary of the State board of control, under date of November 21, 1910, there were actually under irrigation, or certificates for water rights had been issued for 1,286,607.32 acres.[1] A great number of large irrigation enterprises have been projected, and many completed to full operation by private parties and corporations, and by private corporations working in conjunction with the State and National Governments, under the provisions of the Carey Act.[2] Many small projects have also been carried through to completion, while the Government is in process of active construction of what is known as the Shoshone Project, near Cody, under the provisions of the National Reclamation Act.[3]

Within the last few years Wyoming has entered the reservoir stage of her irrigation development. The great reservoirs already constructed and those planned have to do with the storing of the water of the streams of considerable size, where the summer flow is not sufficient for all of the water users depending upon the same source of supply. Where the water is being stored upon the upper reaches of a river, it not only furnishes a supply for the irrigation of the lands in the immediate vicinity, but also a considerable portion

1 See Biennial Report of the State Engineer of Wyoming, 1909-1910, pp. 31, 48.

For the Carey Act in Wyoming, see Sec. 2124.

3 For the National Reclamation Act, see Chap. 65, Secs. 1235-1286.

For the National Reclamation Act in Wyoming, see Sec. 2126.

of the water so used finds its way back into the stream, and it is then used by the irrigators below. The water of the stream thus does double service.[4] And in a number of instances the water rights of those living along the lower reaches of the rivers are of more value today than they were before the water was stored along their upper portions, for the reason that the late summer flow has been increased.

According to the census report for 1910, the total number of farms irrigated in 1909 was 6,297, against 3,721, in 1899, an increase of 2,576 or 69.2 per cent.

The total acreage irrigated in 1909 was 1,133,302 acres, against 605,878 acres in 1899, an increase of 527,424 acres or 87.1 per cent. The total acreage which all enterprises were capable of irrigating in 1910 was 1,639,510 acres. The acreage included in enterprises completed or under construction in 1910 was 2,224,298 acres.

The acreage irrigated in 1909 classified by type of enterprise, is reported as follows: Under the United States Reclamation Service, 12,905 acres; under the United States Indian Service, 4,270 acres; under the Carey Act, 86,252 acres; under irrigation districts, 11,800 acres; by co-operative enterprises, 116,317 acres; by commercial enterprises, 87,935 acres; by individual and partnership enterprises, 813,823 acres.

**§ 2099. Criticism of the Wyoming laws.**—As will be readily seen from the following sections of this chapter, the basis of the Wyoming constitution and laws governing the use of water for irrigation and other beneficial uses is pre-eminently that of State control or the administration by the State.[1]

By its constitutional provisions adopted in 1890, followed by the Act of the legislature of the new State of 1891, a speedy and final solution of many of the troubles which formerly beset the irrigators of the State of Wyoming was found. The law has stood the test of time and has been largely followed in other States adopting the system of State control, notably Nebraska, Nevada, Oregon, and Utah. In preparing this law, the law of Colorado was followed to a considerable extent, with one notable difference. The adjudication of

[4] For the storage of water, see Secs. 837-846, 2110.

[1] For the laws of State control, or State administration, see Chap. [illegible], Secs. 1337-1367.

water rights was left in the first instance to the board of control instead of to the courts, as is the case in Colorado. Advantage was taken of the experience of other States, and much that was best was incorporated from other irrigating countries. The law is unique in this, that the State does not necessarily wait for controversies and losses to arise, but of its own motion steps in and ascertains how much water is available for irrigation, who are the claimants to this water, and then, knowing these fundamental facts, gives the use of the water to the proper persons, and employs its own agents to see that the distribution is made. In the State of Wyoming, at least, there will no longer be the ludicrous spectacle of learned judges solemnly decreeing the right to from two to ten times the amount of water flowing in the stream, or in fact amounts so great that the channel of the stream could not possibly carry them, thus practically leaving the questions at stake as unsettled as before.

From a study of the law it is very apparent that the State engineer and board of control hold the most important offices in that State so far as its agricultural interests are concerned, and by a wise and skillful exercise of the functions intrusted to them can bring about great changes for the better in the development of the agricultural resources of the State. The State engineer is also the president of the board of control. Objection may be made by some that there is too great a centralization of power in one man. But this is answered by the provision for appeal to the courts by any party feeling himself aggrieved, and by the provision that when the case shall be finally decided the right of the prevailing party relates back to the first step taken by him to secure his water rights. Thus his rights are not jeopardized by the delays often attendant upon court proceedings. The law provides that the priority of the claimant's rights shall be the basis for the determination of his right to use the water. The law also provides for the adjudication of his claim, which when made entitles the claimant to a certificate of appropriation to the water, stating the amount of water he is entitled to, the land it is intended to irrigate, and the number of his priority. And now for the first time he has a deed to the water, which is even more important and valuable than the deed to his land, from the fact that his land would be absolutely worthless without the water.

By Act of the legislature of 1907, the irrigation district law was adopted, largely taken from that of California, with two notable ex-

ceptions, only the lands that are benefited may be included within the district; and, with the law of State control ever in mind, the State engineer is required to pass upon the feasibility of the plans for the district before such district can be organized.[2]

Taking it all in all, we regard the irrigation and water laws of Wyoming as comprehensive and efficient as those of any of our States. The law of State control having been adopted when the population of the State was sparse, all the water rights existing prior to its passage having been adjudicated, and the stream measurement having been practically completed, and new water rights having to be acquired under the administration of the State, it gives a basis to work upon. No new appropriation can be legally made where the water flow of the stream from which it is attempted has been exhausted by previous appropriations. Another good feature of the working of the law is that it makes an accessible record of all appropriations and vested water rights within the State. As the population of certain localities becomes more dense, and the more intensive farming becomes general, the State irrigation district law will undoubtedly be taken advantage of to a greater extent than it is at present.

Probably the greatest evidence of the satisfaction that the working of the Wyoming law is giving is the fact that comparatively few cases involving water rights have ever reached the courts, and especially the State Supreme Court.

**§ 2100. State constitutional provisions.**—The admission of Wyoming as a State on July 10, 1890, was calculated to work great changes in its irrigation law. In the constitution of the State, adopted by the people in the fall of 1889, and ratified by Congress on the admission to statehood, it was provided that all waters were the property of the State; that there should be a board of control, consisting of the State engineer and superintendents of water divisions, to have control of the appropriation, distribution, and diversion of all waters, subject to review by the courts; that priority of appropriation gives the better right, and that the State shall be divided into four water districts by the legislature. This was the beginning of the present simple but effective irrigation laws of

2 For the irrigation district law of Wyoming, see Sec. 2125. For the irrigation district laws, see Secs. 1386-1432.

Wyoming, which will be discussed in the subsequent portion of this chapter.

The constitutional provisions referred to were as follows:

Article I, Section 31, provides: "Water being essential to industrial prosperity, of limited amount, and easy of diversion from its natural channel, its control must be in the State, which, in providing for its use, shall equally guard all the various interests involved."[1]

Section 32 provides: "Private property shall not be taken for private use, unless by consent of the owner, except for private ways of necessity, and for reservoirs, drains, flumes, or ditches on or across the lands of others, for agricultural, mining, milling, domestic, or sanitary purposes, nor in any case without due compensation."[2]

Article VIII, Sections 1 to 5, provide:

"Sec. 1. The waters of all natural streams, springs, lakes, or other collections of still water, within the boundaries of the State, are hereby declared to be the property of the State.[3]

"Sec. 2. There shall be constituted a board of control, to be composed of the State engineer and superintendents of water divisions, which shall, under such regulations as may be prescribed by law, have the supervision of the waters of the State and of their appropriation, distribution, and diversion, and of the various officers connected therewith. Its decisions to be subject to review by the courts of the State.[4]

"Sec. 3. Priority of appropriations for beneficial uses shall give the better right. No appropriation shall be denied, except when such denial is demanded by public interest.[5]

[1] For the construction of the above section, see Farm Inv. Co. v. Carpenter, 9 Wyo. 110, 61 Pac. Rep. 258, 50 L. R. A. 747, 87 Am. St. Rep. 918.

[2] See Sterritt v. Young, 14 Wyo. 146, 82 Pac. Rep. 946, 4 L. R. A., N. S., 169, 116 Am. St. Rep. 994; Gustin v. Harting, —— Wyo. ——, 121 Pac. Rep. 522.

[3] See Farm Inv. Co. v. Carpenter, *supra;* Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939; Chicago etc. R. Co. v. McPhillamey, —— Wyo. ——, 118 Pac. Rep. 682.

See, also, the Act of 1911, Laws, 1911, Chap. 43, p. 57, authorizing the attorney general of the State to take steps to protect Wyoming rights upon interstate streams.

[4] See cases cited *supra.*

[5] See cases cited *supra;* Moyer v. Preston, 6 Wyo. 308, 44 Pac. Rep 845, 71 Am. St. Rep. 914; Willey v. Decker, 11 Wyo. 496, 73 Pac. Rep. 210, 100 Am. St. Rep. 939.

"Sec. 4. The legislature shall by law divide the State into four (4) water divisions, and provide for the appointment of superintendents thereof.

"Sec. 5. There shall be a State engineer, who shall be appointed by the Governor of the State and confirmed by the Senate; he shall hold his office for the term of six (6) years, or until his successor shall have been appointed and shall have qualified. He shall be president of the board of control, and shall have general supervision of the waters of the State and of the officers connected with its distribution. No person shall be appointed to the position who has not such theoretical knowledge and such practical experience and skill as shall fit him for the position." [6]

Article XIII, Section 5, provides:

"Sec. 5. Municipal corporations shall have the same right as individuals to acquire rights by prior appropriation and otherwise to the use of water for domestic and municipal purposes, and the legislature shall provide by law for the exercise upon the part of incorporated cities, towns, and villages of the right of eminent domain for the purpose of acquiring from prior appropriators upon the payment of just compensation, such water as may be necessary for the well being thereof and for domestic uses." [7]

**§ 2101. Water right defined—Preferred uses defined—Change to preferred use.**—By the Act of the legislature of the State of Wyoming of 1909,[1] embodied in the Compiled Statutes of Wyoming, 1910, as Sections 724, 725, 726, there was enacted the following:

"724. A water right is the right to use the water of the State, when such use has been acquired by the beneficial application of water under the laws of the State relating thereto, and in conformity with the rules and regulations dependent thereon. Beneficial use shall be the basis, the measure, and limit of the right to use water at all times, not exceeding in any case, the statutory limit of volume. Water being always the property of the State, rights to its use shall attach to the land for irrigation, or to any other purpose or object for which acquired in accordance with the

[6] See Farm Inv. Co. v. Carpenter, supra.

[7] See Johnston v. Little Horse Creek Irr. Co., 13 Wyo. 208, 79 Pac. Rep. 22, 70 L. R. A. 341, 110 Am. St. Rep. 986.

[1] Laws, 1909, Chap. 68, Secs. 1-3.

beneficial use made and for which the right receives public recognition, under the law and the administration provided thereby. Water rights can not be detached from the lands, place, or purpose for which they are acquired, without loss of priority.

"725. Water rights are hereby defined as follows, according to use: Preferred uses shall include rights for domestic and transportation purposes; existing rights not preferred, may be condemned to supply water for such preferred uses in accordance with the provisions of the law relating to condemnation of property for public and semi-public purposes. Such domestic and transportation purposes shall include the following: First, water for drinking purposes, both for man and beast; second, water for municipal purposes; third, water for the use of steam engines and for general railway use; fourth, water for culinary, laundry, bathing, refrigerating (including the manufacture of ice), and for steam and hot water heating plants. The use of water for irrigation shall be superior and preferred to any use where turbine or impulse water wheels are installed for power purposes.

"726. Where it can be shown to the board of control under the provisions hereof, that a preferred use is to be made, the procedure for the change of such use shall embrace a public notice, and inspection and hearing if necessary by and before the proper division superintendent, a report of such superintendent to the board of control and an order by said board. If the change of use is approved, just compensation shall be paid and under the direction of the board, proper instruments shall be drawn and recorded."[2]

The State engineer in his last report in referring to the above Act, says: "All who have studied this legislation agree that it represents the most important action of the law makers of the State, since the original statute was enacted in 1891."[3] No case seems to have been decided at this writing as to the constitutionality of the various sections of this Act, and especially as to the provisions of the last section above quoted. But it seems to us to provide for the taking of private property both without due process of law, and without provisions for just compensation; and, therefore, coming within constitutional inhibitions. Although the State may own the title to the water, as provided by Article VIII, Section 1, of the

[2] Secs. 724-726, Comp. Stats., 1910.

[3] Biennial Report of the State Engineer of Wyoming, 1909-1910, p. 17.

State constitution,[4] it can not be contended for a moment, but that the right to the use of the water as acquired by any person, under the laws of the State, is a valuable property right, from which he can not be devested without due process of law and then only upon the payment of just compensation.[5]

§ 2102. **Administrative officers—Board of control and powers and duties thereof.**—Under the provisions of Article VIII, Section 2, of the State constitution,[1] there is constituted a board of control composed of the State engineer and the superintendents of the four water divisions of the State. The office of the board is with the State engineer, and it shall hold two meetings each year. And, as provided by the section of the constitution above referred to, the powers of said board are, under such regulations as may be prescribed by law, to have the supervision of the waters of the State and of their appropriation, distribution, and diversion, and of the various officers connected therewith,[2] its decisions to be subject to review by the courts. The State engineer shall be *ex officio* president of said board, and shall have the right to vote on all questions coming before it, and a majority of all the members shall constitute a quorum to transact business.[3] The board is also given the authority, with power of removal, to appoint a secretary, whose duties are the usual ones appertaining to such an office.[4] One of the duties assigned to the board was the determination of priorities of the right to the use of the public waters of the State, which determination should begin on the streams most used for irrigation, and be continued as rapidly as possible, until all the claims for appropriation then on record shall have been adjudicated.[5]

§ 2103. **Administrative officers—State engineer and his powers and duties.**—Sections 149 to 157 of the Compiled Statutes of Wyo-

For the determination of water rights by the board of control, see Secs. 2111-2114.

ming, 1910,[1] provide for the duties of the State engineer.[2] Before entering upon his duties, he shall take the oath prescribed by the constitution, and enter into a bond to the State in the penal sum of $5,000 and conditioned for the faithful discharge of his duties. His salary is fixed at $3,500 per annum, and he shall keep his office at the State capital in the capitol building.[3]

His duties are defined as follows: "The State engineer shall make, or cause to be made, measurements and calculations of the discharge of streams, from which water shall be taken for beneficial purposes, commencing such work upon those streams as are most used for irrigation, or other beneficial purposes. He shall collect facts, and make surveys to determine the most suitable location for construction of works for utilizing the water of the State, and to ascertain the location of the lands best suited for irrigation. He shall examine reservoir sites and shall, in his reports, embody all the facts ascertained by such surveys and examinations, including, wherever practicable, estimates of the cost of the proposed irrigation works, and of the improvement of reservoir sites. He shall become conversant with the waterways of the State, and the needs of the State as to irrigation matters, and in his reports to the Governor he shall make such suggestions as to the amendment of existing laws, or the enactment of new laws, as his information and experience shall suggest, and he shall keep in his office full and proper records of his work, observations, and calculations, all of which shall be the property of the State.[4]

"The State engineer shall prepare and render to the Governor, biennially, and oftener if required, full and true reports of his work, touching all matters and duties devolving upon him by virtue of his office, which report shall be delivered to the Governor on or before the 30th of November, of the year preceding the regular session of the legislature."[5]

The statute also provides that the State engineer shall have the power to employ an assistant engineer, at an expense of not to

1 The references to the statutes in the succeeding sections of this chapter will be to this volume unless otherwise indicated.

2 The office of State engineer is provided for in the constitution; see previous section, No. 2102. See, also, the duties of the board of control, of which the State engineer is president, Sec. 2102.

3 Secs. 149-151, Comp. Stats., 1910.

4 Sec. 152, Comp. Stats., 1910.

5 Sec. 155, Comp. Stats., 1910.

exceed $1,500 per annum, and to employ a deputy engineer, at an expense not to exceed $1,800 per annum. The duty of these officers is to act under the direction of the State engineer.[6] The State engineer and his assistants are entitled to traveling expenses, when away from their office on State business.[7] For the services performed by the office of the State engineer a system of fees is established. These fees are payable in advance, and are to be paid by him into the general fund of the State treasury as by law provided.[8]

§ 2104. **Administrative officers—Superintendents of water divisions and their duties.**—According to the provisions of Article VIII, Section 4, of the State constitution,[1] the legislature divided the State into four water divisions and defined the boundaries thereof.[2] The legislature also provided for the appointment of one superintendent for each water division, by the Governor with the consent of the senate; such superintendents to hold office for the term of four years; each superintendent to receive a salary of $1,500 per annum and actual traveling expenses.[3] A superintendent must be competent to fill the position, and the statute provides that the State engineer shall, from time to time, conduct examinations for candidates for such positions, and a list of those who qualify shall be filed with the Governor. "The examination shall consist of questions relative to the irrigation law and its administration, the measurement of flowing water, evaporation, seepage, and common alkalies, drainage, and the hydrographic features of the water division in which the candidate may reside."[4] The duty of a division superintendent is to have control over the water commissioners of his division; he shall also, under the direction of the State engineer, execute the laws relative to the distribution of water in accordance with the rights of priorities of appropriation, and perform such other functions as may be assigned to him by the State engineer. A superintendent may make such supplementary regulations as are

necessary to enforce the general laws, relative to the distribution of water.[5] Parties dissatisfied with the decision of a superintendent may appeal from such decision to the State engineer, by filing with the engineer a copy of the order or regulation complained of, and a statement of the manner in which the same injuriously affects their interests. The engineer shall, after due notice, hear whatever testimony may be brought forward by the petitioner, either orally or by affidavit and, through the division superintendent, shall have power to suspend, amend, or confirm the order complained of.[6]

§ 2105. **Administrative officers—Commissioners of water districts and their duties.**—The statute provides that the board of control shall divide the State into water districts, from time to time as the necessity arises, said districts to be so constituted as to secure the best protection to the claimants for water, and the most economical supervision on the part of the State.[1] There shall also be appointed by the Governor, one water commissioner for each district, who shall be selected from the persons recommended by the superintendent of the water division in which such district is situated.[2] It is made the duty of a water commissioner to divide the water of the natural stream or streams of his district among the several ditches and reservoirs taking water therefrom, according to the prior rights of each, respectively. He is also given the power to shut and fasten, under the direction of the division superintendent, the headgates of ditches, whenever it is necessary to do so, by reason of the prior rights of others. He shall also as near as may be, divide, regulate, and control the use of the water of all streams within his district as will prevent the waste of water, or its use in excess of the volume to which any appropriator is lawfully entitled. Any person who may be injured by the action of any water commissioner, or by his failure to act, is given the right of appeal to the division superintendent, and for his decision he may appeal to the State engineer. And, from the decision of the State engineer an appeal may be had to the district court of the proper county.[3] It

is also required that all water commissioners shall make reports, whenever called upon to do so by the division superintendents, upon the following subjects: The amount of water actually coming into the district to supply ditches, canals, and reservoirs; whether such supply is on the increase or decrease; what ditches, canals, and reservoirs are at that time without their proper supply, and any other and further information as the division superintendent of that division may require.[4] A water commissioner is also given the power, in cases of emergency, to employ suitable assistants to aid him in the discharge of his duties.[5] He is also given the power to arrest parties unlawfully interfering with any works, and to make complaint against the party so arrested.[6]

§ 2106. **The appropriation of water—Applications.**—Any person, association, or corporation hereafter intending to acquire the right to the beneficial use of the public water of the State of Wyoming shall, before commencing the construction, enlargement, or extension of any ditch, canal, or other distributing works, or performing any work in connection with said construction, or proposed appropriation, make an application to the State engineer for a permit to make such appropriation. The contents of such applications have been sufficiently discussed in previous sections of this work in the chapter on State administrative laws, or State control,[1] and it is further provided that any person who shall wilfully divert or use water to the detriment of others without compliance with law shall be deemed guilty of a misdemeanor and, on conviction thereof, shall be fined in a sum not exceeding $100 or imprisoned in the county jail for a term not exceeding six months, or both such fine and imprisonment; and the possession or use of water, except when a right of use is acquired in accordance with law, shall be deemed *prima facie* evidence of the guilt of the person using it.[2] It is made the duty of the State engineer to file such application, and to

The appropriation of water within the State of Wyoming must be in accordance with its statutes. Morris v. Bean, 159 Fed. Rep. 651, 86 C. C. A.

ascertain if it contains all the facts necessary, and as required by law. If it does not, it must be returned for amendment. All applications which comply with the provisions of the statute, shall be recorded in a suitable book kept for that purpose. Each application for a permit to appropriate water must be accompanied with maps, plats, and plans, as provided by the statute, and giving full data as to the proposed works. If these are not complete, the State engineer may require additional ones to be furnished.[3]

§ 2107. **The appropriation of water—Approval or rejection of applications.**—It is made the duty of the State engineer to approve all applications made in proper form, which contemplate the application of water to a beneficial use and where the proposed use does not tend to impair the value of existing rights, or be otherwise detrimental to the public welfare. "But where there is no unappropriated water in the proposed source of supply, or where the proposed use conflicts with existing rights, or threatens to prove detrimental to the public interest, it shall be the duty of the State engineer to reject such application and refuse to issue the permit asked for." If the application is approved, the applicant may proceed with the construction of the necessary works, and to perfect the proposed appropriation. If the application is refused, no further steps may be taken. Before acting upon the application the State engineer may require additional information. If it is proposed to divert more than 25 cubic feet of water per second, or to reclaim more than 1,000 acres of land, he may require a statement. In case of incorporated companies, he may require the submission of the articles of incorporation, the names and residences of its directors and officers, and the amount of its authorized and paid-up capital. If the applicant is not an incorporated company, he may require a showing as to the names of the parties, and a showing as to their financial ability to carry out the proposed work.[1] In his endorsement of approval on any application, the State engineer shall require that actual construction work shall begin within one

year from the date of such approval, and that the construction shall be completed within a period of five years from such date. He may limit the applicant to a less period of time for the completion of the work. He shall also have the authority, for good cause shown, to extend the time for the completion of the works.[2]

§ 2108. **The appropriation of water—Appeals.**—Any applicant feeling himself aggrieved by the endorsement made by the State engineer upon his application may, in writing, in an informal manner and without pleadings of any character, appeal within sixty days of the date of such endorsement, and serve notice thereof to the applicant, to the board of control, for an examination and reversal of any such action of the State engineer. Upon receipt of such appeal, the secretary of the board shall notify its members, and a date must be fixed when such appeal shall be heard. Parties interested must be notified of such hearing and may appear and may be heard.

An appeal may also be taken from the order of determination of the board of control in the case to the district court in which the greatest use of water is proposed to be made under the application. Such appeal must be taken within six months of the date of the action of the board. The procedure in such appeals must be in conformity to the provisions of Sections 780 to 788, and Section 798, hereinafter discussed under appeals from orders adjudicating rights.[1] The attorney general of the State shall, in such cases, represent the State board of control.[2]

§ 2109. **The appropriation of water—Certificate—Priority—Use of water.**—Upon it being made to appear to the satisfaction of the board of control that any appropriation has been perfected in accordance with such application, and the endorsement thereof by the State engineer, it is made the duty of the board of control, by the hand of its president, attested under the seal of the secretary, to send to the county clerk a certificate of the same character as that described in Section 778, hereinafter discussed under the

2 Sec. 732, Comp. Stats., 1910.
1 See Sec. 2114.
2 Sec. 733, Comp. Stats., 1910.

adjudication of water rights,[1] which certificate shall be recorded in the office of the county clerk.[2]

The priority of such appropriation shall date from the filing of the application in the engineer's office.[3]

Rights to the use of water shall be limited and restricted to so much thereof as may be necessarily used for irrigation or other beneficial purposes, irrespective of the carrying capacity of the ditch, and all the balance of the water not so appropriated shall be allowed to run in the natural stream from which such ditch draws its supply of water, and shall not be considered as having been appropriated thereby; and in case the owner or owners of any such works shall fail to use the water therefrom during any five successive years, they shall be considered to have abandoned the same, and shall forfeit all rights thereto, and the water formerly appropriated by them may again be appropriated for irrigation and other beneficial purposes; neither shall the owner of such ditch have any right to receive from others any royalty for the use of water carried thereby, but every such owner or owners having a surplus of water and furnishing the same to others from any ditch, canal, or reservoir shall be considered common carriers and shall be subject to the same laws that govern common carriers.[4]

Those entitled to the use of water are given the right to rotate in the use as between themselves, when such rotation can be made without injury to prior rights.[5]

Appropriators are required to construct and maintain head-gates and measuring devices. Upon a refusal of the appropriator to comply with this provision, the water commissioner is authorized to shut the ditch, and no water will be permitted to run therein until the order is complied with.[6]

*Legal Standard for the Measurement of Water.*—"A cubic foot of water per second of time shall be the legal standard for the measurement of water in this State, both for the purpose of determining

6 Sec. 740, Comp. Stats., 1910.

the flow of water in natural streams, and for the purpose of distributing water therefrom."[7]

And, where the appropriation is for irrigation, no allotment shall exceed one cubic foot per second for each seventy acres of land.[8]

§ 2110. **Reservoir permits—Appropriation of water furnished by reservoirs.**—Any person, corporation, association, or organization, of any nature whatsoever, intending to store, for a beneficial use, any of the unappropriated waters of the State of Wyoming, shall, before commencing any works for such purpose, make an application to the State engineer for a permit to construct a reservoir. The form of such application and the procedure thereunder is similar to that prescribed for the construction of other works, and discussed in a preceding section;[1] provided, that an enumeration of any lands proposed to be irrigated under this chapter shall not be required under the primary permit, but must be enumerated under the secondary permit, which is provided for as follows: The party proposing to apply to a beneficial use the water stored in any such reservoir shall file with the State engineer an application for permit, to be known as the secondary permit, in compliance with the provisions of Sections 727 to 737, inclusive.[2] The said application shall refer to such reservoir for a supply of water, and must be accompanied with documentary evidence that the applicant has entered into an agreement with the owner of the reservoir for a permanent and sufficient interest in said reservoir to impound enough water for the purposes set forth in the application. When the beneficial use of the water has been completed, a final certificate of appropriation shall be issued, and shall refer both to the ditch described in the secondary permit and the reservoir described in the primary permit.[3] Whenever the owner of a reservoir shall desire the use of the bed of the stream, for the purpose of carrying stored water, he shall notify the water commissioner of the district, giving the date when it is proposed to discharge water from such reservoir, its volume in acre feet, and the names of the persons

and ditches entitled to its use. The water commissioners shall then close, or so adjust the headgates of all ditches, not entitled to the use of such stored water, as will enable those having the right to secure the volume to which they are entitled.[4]

Provisions are made for the appointment by the State engineer of an assistant engineer, whenever the same shall be necessary for the protection of the various interests involved. The State engineer must estimate the cost of such superintendence, which amount must be paid at once to the State engineer by those undertaking the work. A failure to comply with these provisions subjects the permit to cancellation.[5]

The use of water stored under the provisions of this chapter may be acquired on such terms as shall be agreed upon by and between the parties in interest.[6] The priority of right to store or impound water shall date from the filing of the application in the State engineer's office.[7]

The owners of reservoirs shall be liable for all damage arising from leakage or overflow of the waters therefrom, or by floods caused by the breaking of embankments of such reservoirs.[8]

**§ 2111. The determination of existing rights—Notice and statement of claim.**—The board shall prepare a notice setting forth the date when the engineer will begin a measurement of any particular stream and the ditches diverting the waters therefrom, and a place and date when the superintendent of that division shall begin the taking of testimony as to the rights of the parties taking water therefrom. Provisions are made for the publication of the notice and adjournments. It is also the duty of the superintendent to mail to each party having a recorded claim to the waters of said stream a similar notice, and he shall in addition thereto enclose with said notice a blank form on which the claimants shall present in writing all the particulars concerning the appropriation; the said statement to include the following: "The name and postoffice address of the claimant. The nature of the use on which the claim for appropria-

See, also, for damages from reservoirs, Secs. 1670-1672.

tion is based. The time of the commencement of such use, and if distributing works are required. The date of beginning the survey. The date of beginning of construction. The date when completed. The date of beginning and completion of enlargements. The dimensions of the ditch as originally constructed and as enlarged. The date when water was first used for irrigation or other beneficial purposes, and if used for irrigation the amount of land reclaimed the first year; the amount in subsequent years, with the dates of reclamation, and the amount of land such ditch is capable of irrigating. The character of the soil and the kind of crops cultivated, and such other facts as will show a compliance with the law in acquiring the appropriation and the rank of priority claimed." Each of said claimants is required to certify to his statements under oath.[1]

Whenever the State board of control shall proceed to adjudicate and determine the rights of the various claimants to the use of water upon any stream, it is made the duty of all claimants to appear and submit proof of their respective appropriations, at the time and in the manner required by law; and any such claimant who shall fail to appear in such proceedings and submit proof of his appropriations shall be barred and estopped from subsequently asserting any rights theretofore acquired upon the stream embraced in such proceedings, and shall be held to have forfeited all rights to the use of said stream theretofore claimed by him. Provided, that any person claiming such rights, upon whom no notice was served other than by the publication in the newspaper, may, within one year after the entry of the order of the board, have the same opened and be permitted to give proof of his appropriation, upon giving notice to the other parties interested.[2]

Upon the date named in the notice provided for as above, the division superintendent shall begin the taking of said testimony, and shall continue until said testimony shall be completed; provided, that adjournments may be taken of the hearing from time to time, for good cause. In taking proofs of appropriation under permits issued after the stream has been adjudicated, the superintendent may authorize the water commissioner to take such proofs, and forward the same to the division superintendent. Upon the completion of the taking of the evidence by the division superin-

[1] Secs. 765-769, Comp. Stats., 1910. [2] Sec. 794, Comp. Stats., 1910.

tendent, it shall be his duty to at once give notice in one issue of a newspaper of general circulation in the county, and by registered mail to the various claimants, that upon a certain day and place named in the notice, all of said evidence shall be open to the inspection of the various claimants, and the superintendent shall keep the said evidence open to inspection not less than one day and not more than five days.[3]

It is also made the duty of the State engineer to proceed at the time specified in the notice to the parties on said stream, to be adjudicated, to make an examination of said stream, and the works diverting water therefrom, the said examination to include the measurement of the discharge of the said stream, and of the carrying capacity of the various ditches and canals diverting therefrom; an examination of the irrigated lands, and an approximate measurement of the lands irrigated, or susceptible of irrigation from said ditches, which observation and measurements shall be reduced to writing, and made a matter of record in his office. A plat of the lands and stream must also be made.[4]

**§ 2112. The determination of existing rights—Contests—Transmission of evidence.**—Should any person, corporation, or association of persons desire to contest the rights of any one who has submitted his evidence as in the last section provided, he shall, within 15 days after the testimony so taken was opened to public inspection, in writing, notify the superintendent of the division, stating with reasonable certainty the grounds of the proposed contest, which statement shall be verified; and the said superintendent shall notify the said contestant and the one whose rights are contested to appear before him at such convenient place as the superintendent shall designate in said notice. The superintendent shall fix the place and time, both as to the day and hour, for the hearing of the said contest, not less than 30 nor more than 60 days from the date of the service of notice; the said notice to be served and returned in the same manner as summons issued out of the district court. The superintendent must hear the testimony in the case, and the said hearing may be adjourned from time to time. He has the power to issue subpoenas and compel the attendance of

[3] Secs. 770, 771, Comp. Stats., 1910. [4] Sec. 776, Comp. Stats., 1910.

witnesses. The evidence on such proceedings shall be confined to the subjects enumerated in the notice of contest. The superintendent shall require a deposit of $8 per day from each party, the successful party to receive back his deposit after the determination of the contest.[1]

Upon the completion of the evidence in the original hearing, and that taken in all contests, it is made the duty of the superintendent to transmit the same to the office of the board of control, in person or by registered mail.[2]

Whenever the rights to the use of the waters of any stream have been adjudicated, and it shall appear by the records that it had not been at one and the same time, any person who may desire to contest the claims or rights of other persons shall proceed in the manner provided as above; provided, that contests may not be entered into except between appropriators who were not parties to the same adjudication in the original hearings. The evidence in such contests must be sent to the board of control, which is given the power to cancel any old certificate and to issue new ones, if necessary as the result of such contest.[3]

**§ 2113. The determination of existing rights—Order determining priorities—Certificates of right.**—At the first regular meeting of the board of control, after the completion of the measurement by the State engineer, and the return of the evidence by the division superintendent, it is made the duty of the board to make, and cause to be entered of record in its office, an order determining and establishing the several priorities of right to use the waters of said stream, and the amounts of appropriations of the several persons claiming water from such stream, and the character and kind of use. Each appropriation shall be determined by its priority and amount, by the time by which it shall have been made, and the amount of water which shall have been applied for beneficial purposes; provided, that such appropriator shall at no time be entitled to the use of more water than he shall make a beneficial application of on the lands for which the appropriation was made. Pro-

1 Secs. 772-774, Comp. Stats., 1910.
2 Sec. 775, Comp. Stats., 1910.
3 Secs. 795, 796, Comp. Stats., 1910.

vided, that no allotment shall exceed one cubic foot per second for each seventy acres of land.[1]

The final orders or decrees of the board of control as to the determination of rights shall be conclusive as to all prior appropriations, and the rights of all existing claimants upon the stream, subject, however, to the provisions of law for rehearings in such proceedings, and for the reopening of the orders and decrees therein and for appeals from such orders or decrees.[2]

After the respective rights have been determined, it is made the duty of the secretary of the board of control to issue to each person, association, or corporation a certificate of his right, to be signed by the State engineer as president of the board, and attested under seal by the secretary, setting forth the name and postoffice address of the appropriator, the priority date and number of such appropriation, the amount of water appropriated, and, if such appropriation be for irrigation, a description of the legal subdivisions of the land to which said water is to be applied. Such certificate is to be transmitted to the county clerk of the county in which the appropriation is made, for record, and thereafter to be transmitted to the appropriator.[3]

After any final order of the board of control, adjudicating the priorities upon any stream, any party interested therein may, within one year thereafter, apply for a rehearing for reasons to be stated in the application. Notice of such rehearing must be served on the adverse parties. Upon such hearing, the board is given the authority to modify or alter the original order as shall appear to be just and proper.[4]

**§ 2114. The determination of existing rights—Appeal to the courts.**—Any party or number of parties acting jointly, who may feel themselves aggrieved by the determination of the board of control, may appeal from the decision of the board to the district court of the county in which the stream involved in such determination

may be situated. All persons joining in the appeal shall be joined as appellants, and all persons having interests adverse to the parties appealing, or either of them, shall be joined as appellees.[1] The party appealing shall, within 60 days of the determination of the board, file in the district court a notice in writing stating that such party or parties appeal to such district court from the determination and order of the board of control; and, upon filing of such notice, the appeal shall be deemed to have been taken; provided, however, that the party appealing shall, within the sixty days mentioned, enter into an undertaking, to be approved by the district court, and to be given to all the parties in the said suit or proceeding, other than the parties appealing, and to be in such an amount as the court shall fix, conditioned that the parties without unnecessary delay will prosecute their appeal, and will pay all costs and damages, which the parties to whom the undertaking is given, or either, or any of them, may sustain in consequence of such appeal.[2]

Upon the filing of the notice of appeal, and the approval of the bond, the clerk of the district court shall transmit to the board of control a notice to the effect that the appeal has been perfected, which notice shall be entered of record by the secretary of the board, and the appellant shall cause a certified copy thereof to be served on each of the appellees, in the same manner as is provided for the serving of a summons in the district court. The appellant shall also, within six months after the appeal is perfected, file in the office of the clerk of the district court a certified transcript of the order made by the board, and a certified copy of all of the records of the board relating to such determination, and a certified copy of all the evidence offered before the board, together with the petition setting out the cause of complaint of the party appealing, to which petition all parties joined as appellees shall be served with notice by the issuance of summons out of the office of the clerk of the district court.[3]

All proceedings on appeal shall be conducted according to the provisions of the code of civil procedure, and the practice of ap-

1 Sec. 779, Comp. Stats., 1910.

3 Secs. 781, 782, Comp. Stats., 1910; Daley v. Anderson, *supra*.

peals from the district court of the State to the supreme court; provided, that the practice on appeal in the district court, as to pleadings necessary to be filed and the admission of evidence upon the trial, shall be the same as is now or may hereafter be provided for by law regulating appeals from the justice court. In other words, the case is to be tried *de novo*.[4]

It is made the duty of the clerk of the court, immediately upon the entry of any judgment, order, or decree by the district court, to transmit a certified copy of the same to the board of control. The same must be immediately entered upon the records, and the State engineer shall forthwith issue to the superintendent of the water division, instructions in compliance with the said judgment, order, or decree, and in execution thereof.[5]

The party defeated on appeal must pay the costs thereof. During the pendency of an appeal, the division of the water from the stream involved shall be made in accordance with the order of the board of control. Proceedings under the order of the board of control may be stayed by filing a stay bond in the district court, conditioned for the payment of all damages caused by not enforcing such order.[6] An appeal may, of course, be had from the judgment of the district court to the supreme court of the State under the usual proceedings provided by the statute. All appeals, both in the district and supreme courts, are to be advanced to the head of the docket for the trial or hearing of civil cases.[7]

It is made the duty of the clerks of the several district courts in the State, upon the rendering of judgment by the respective courts in each and every case wherein is involved, in any way, any question affecting the title to any water rights, irrigating, or water system of any kind whatever, to forthwith forward to the board of control a certified copy of such judgment.[8]

§ 2115. **The ownership of irrigation works.**—Unless the owners of irrigation works make a record as provided by the statute, or have a record thereof made in some other manner, showing the relative ownership of each interested party in such works, "said interests shall be established by the ratio between the water right of each water user to the total rights adjudicated under such irri-

7 Sec. 787, Comp. Stats., 1910.
8 Sec. 797, Comp. Stats., 1910.

gation works." The relative interests of joint owners shall, therefore, be fixed by the issuance of the final certificate of appropriation as the same appears of record on February 20, 1907, or as shall hereafter be recorded in the office of the board of control and in the offices of the respective county clerks, "and no action for the recovery of the title to such irrigation works can be brought after ten years from the date when the final certificates of appropriation have been recorded in the office of said county clerk." Provided, that during such ten years the interested water users, as mentioned in the final certificates of appropriation, or their successors, have had continuous, open, adverse, and undisputed possession of such irrigation works. And every conveyance of such works shall hereafter be executed and acknowledged in the same manner as a conveyance of real estate, and recorded as provided, "and any such conveyance which shall not be made in conformity with the provisions of this chapter shall be null and void as against subsequent purchasers thereof in good faith and for a valuable consideration."[1] Affidavits of interest may be made by the respective parties, which affidavits shall be *prima facie* evidence of the facts therein stated in any courts of the United States.[2]

Any transfer made to a purchaser in good faith and for a valuable consideration, of any irrigation works after the expiration of ten years from the filing of the affidavit above described, shall vest in the grantee an absolute title in fee simple, free from the claims of any person whatsoever, to the extent of such irrigation works as are claimed in such affidavit, unless before the expiration of said ten years any other party claiming an interest in such irrigation works has filed in the office of the county clerk an affidavit as mentioned in Section 808.[3] Any one falsely swearing to such an affidavit is guilty of perjury.[4]

Where the ownership of any irrigation work is disputed, an action in equity may be brought in the proper court, for the determination of the respective rights of the interested parties. "Provided, that the provisions of this chapter shall not be construed to relate to water rights, or in any way to conflict with the laws governing the same."[5]

**§ 2116. Ditches and the care of.**—It is made the duty of the owner or owners of any ditch for irrigation, or other purposes, to carefully maintain the embankments thereof, so that the waters of such ditch may not flood or damage the premises of others.[1] And, for the purpose of maintaining its works, all mutual corporations and associations are given the power to levy and collect assessments; provided, that any company or association shall have the right to close the headgate and refuse water to all such stockholders, owners, or members who fail or refuse to pay said assessments after ten days' notice thereof, in writing.[2]

The prior vested rights of any mill or ditch owner, or other person, to the use of any such water course are to be preserved.[3] When any such ditch shall be constructed over any public road, it must be bridged by the owner within three days thereafter; otherwise it is made the duty of the county commissioners to bridge the same, at the cost of the owners.[4] Ditch owners are not permitted to dam the waters of any stream or ditch, so as to overflow any public road, or undermine any walls of road embankments, or bridges, and are liable to punishment for so doing, and are also liable to damages.[5] It is made the duty of the owners of such a ditch, at the point where the water is diverted from the natural channel, to construct "some fit and proper obstruction whereby all fish will be prevented from entering said ditch or canal." Any person violating this provision shall be adjudged guilty of a misdemeanor.[6]

The interference with any headgate or water box, or the cutting or breaking down, or the opening of any gate, bank, embankment, or side of any ditch, canal, reservoir, flume, tunnel, or feeder, without authority, is made a misdemeanor, to be punished, upon con-

viction, by fine or imprisonment, or both.[7] And, for this purpose, the water commissioners are given the power to arrest any person so violating the law, and to prefer a complaint before the proper justice of the peace against the party so arrested.[8]

**§ 2117. The organization of ditch companies.**—In 1884 an Act of the legislature was passed for the incorporation of ditch companies, which provides that whenever three or more persons associate to form a company for the purposes of constructing a ditch or ditches for the purpose of irrigating lands, or for other useful purposes, they shall in their certificates specify as follows: "The stream or streams from which the water is to be taken, the point or place on said stream at or near which the water is to be taken out, the line of said ditch as near as may be, and the use to which said water is intended to be applied." A right of way is given to the ditch company, provided that the lines proposed shall not interfere with any other ditch whose rights are prior. Nor shall the water of any stream be diverted from its natural channel by such a company to the injury of prior rights. Every ditch corporation is required to keep its ditch in good condition. Whenever it is necessary to cross any mining claim with a ditch, the ditch company must flume the ditch so far as necessary to protect such claim from injury from the water from said ditch; provided, that in all cases where the ditch has priority of right, the owners of such claim shall be compelled to protect themselves from damages and shall be liable for all injuries to the ditch.[1]

The stock of all ditch companies is made assessable, for the purpose of maintaining the property, and the payment of all necessary expenses.[2]

**§ 2118. Partnership ditches — Maintenance—Disagreements.**—In cases of partnership ditches, if a co-owner fails to perform his share of the work to properly maintain a ditch, the others may,

2 Sec. 820, Comp. Stats., 1910.

after ten days' notice, perform such work, and recover therefor from such person or persons so failing in any court having jurisdiction of the matter.[1] Also, if such owner fails to pay such share within 30 days after receiving a statement thereof, an itemized sworn statement may be filed with the county clerk, and thereby become a lien on the interest in such ditch of the owner in default, which lien may be enforced in the same manner as is provided by law for the enforcement of mechanics' and builders' liens.[2]

Where two or more joint owners in irrigation works, not incorporated, are unable to agree relative to the division or distribution of water, any such owner may apply to the water commissioner of the district, who may then take exclusive charge of such works for the purpose of dividing the water therefrom in accordance with the rights established. The payment for the services of the commissioner must be made by such parties; and any payment not made for such services, after written demand has been made therefor, shall be a lien upon any land or other property owned by an interested water user refusing to pay, and may be recovered by the water commissioner in any court of competent jurisdiction.[3]

§ 2119. **Dams—Inspection of, for protection.**—For the protection from the breakage of dams, the following provisions were enacted: Duplicate plans for any dam across the channel of a running stream, above five feet in height, or of any other dam intended to retain water above ten feet in height, shall be submitted to the State engineer for his approval, and it shall be unlawful to construct such dam until the said plans are approved.[1] The State engineer is also given the authority to examine and inspect, during construction, any dam, or any ditch, canal, or other work carrying over 50 cubic feet of water per second, and at the time of such inspection he may order the parties constructing the same to make any addition or alteration which he may consider necessary for

[1] Sec. 822, Comp. Stats., 1910; Mau v. Stoner, 14 Wyo. 183, 83 Pac. Rep. 218, 15 Wyo. 109, 87 Pac. Rep. 434, 89 Pac. Rep. 466.

[1] Sec. 825, Comp. Stats., 1910.

the security of the work or the safety of any person or persons residing on or owning land in the vicinity of such works.[2]

After such works are constructed, should any person, residing or owning lands in the neighborhood, apply to the State engineer in writing, desiring an inspection of such works, the engineer may order such inspection. Before doing so, he may require the applicant to make a deposit of a sufficient sum to pay the expenses of such inspection. In case the application appears to the engineer to have been justified, he may require the owner to pay such expenses.[3]

§ 2120. **Floating logs and timber upon streams.**—Any person or company desiring to float logs, timber, or lumber, down or upon any stream in the State shall, before commencing operations, apply to the State engineer for a permit. Before such permit is granted, the engineer shall require that a bond shall be given to the State, in such sum as he may deem sufficient, conditioned for the conducting of said drive without delay and for the protection of the owners of irrigating ditches and property along the stream whereon said drive is to be made. Any one violating the provisions of this section shall, on conviction, be fined or imprisoned, or both.[1]

§ 2121. **Irrigation engineers and qualifications.**—By the Act of 1907,[1] it was provided that all engineers and surveyors who shall hereafter perform any field work preliminary to the preparation of an application for permit to use the water of the State, or who shall make any surveys or do engineering work relative to the utilization or use of water, shall satisfy a board, to be known as the board of examining engineers, who shall consist of the State engineer and two engineers of thorough training and experience, to be appointed by the Governor, and serve without compensation, that they belong to one or more of the following classes:

1. Land surveyor. (Examination, plane surveying.)
2. Topographic engineer. (Examination, plane surveying and topographic surveying.)
3. Hydraulic and hydrographic engineer. (Examination, plane surveying and hydraulics.)

2 Sec. 826, Comp. Stats., 1910; Howell v. Big Horn Basin Col. Co., 14 Wyo. 14, 81 Pac. Rep. 785, 1 L. R. A., N. S., 596.

3 Sec. 827, Comp. Stats., 1910; Howell v. Big Horn etc. Co., *supra*.

1 Sec. 828, Comp. Stats., 1910.

1 Laws, 1907, Chap. 86, Sec. 28.

4. Construction and designing engineer. (Examination, plane surveying, design of irrigation works and structures, and computation of earth work.)

5. Administrative irrigation engineer. (Examination, plane surveying, hydraulics, construction work, irrigation law, and practice.)

In case the board is satisfied as to the standing of any applicant, it shall issue a license, upon payment of a fee of $5. The license may be revoked for good cause shown. The State engineer is authorized to refuse to accept any and all work of those who do not avail themselves of the benefit of the Act.[2]

§ 2122. **Recovery for labor and supplies—Bond—Liens.**—By the Act of the legislature of 1909,[1] it is provided that whenever any ditch or canal company shall contract with any persons, or company, for the construction of its works, the owner of such works shall take from the party so contracting to construct the same a bond in some guarantee or surety company, conditioned that such contractor will pay or cause to be paid all laborers, and persons who supply such contractor with material, provisions, or goods of any kind; and if any such ditch or canal company fail to take such bond, such company, or other owners shall be liable to the full extent of such debts. All persons to whom any debt of the kind mentioned in the Act is due shall severally have a right of action on said bond, upon complying with the provisions of the Act.[2]

Every person furnishing labor, material, or supplies in carrying on the work of construction, whose demand has not been paid, may deliver to the owner of such works a verified statement of account, and thereupon such owner shall retain out of the subsequent payments to the contractor the amount of such unpaid account. It is then made the duty of such owner to furnish the contractor a copy of such statement; and, if the contractor shall not, within ten days after the receipt thereof, give the owner written notice that the claim is disputed, the owner shall be justified in paying the same and charging the same to the contractor. Such claimant may then recover in an action at law such amount. This right is given in addition to the right of action upon the bond, as above described.[3]

2 Sec. 3823, Comp. Stats., 1910.
3 Secs. 3824, 3825, Comp. Stats., 1910.

**§ 2123. Condemnation proceedings.**—"Every person, association of persons, company, or corporation," or municipal corporation, who shall, in the course of their business, require "a way of necessity" for reservoirs, ditches, power transmission lines, or other such works, on or across the lands of others, "for agricultural, mining, milling, domestic, electric power transmission, municipal, or sanitary purposes," are given the power to make the necessary surveys, and thereafter to condemn private property for the purposes named. The statute provides for complete procedure for the condemnation of such rights, which must be strictly followed.[1]

Under Article XIII, Section 5, of the State constitution, cities and towns may condemn water rights for domestic and municipal purposes.[2] The right is also given the board of control to change the right of the use of water from one use to some preferred use enumerated by the statute.[3]

**§ 2124. Carey Act lands and rights, and procedure therefor.**—Wyoming was one of the States designated to receive the benefits under the Carey Act.[1] The legislature of the State by the Act of 1895 [2] accepted the grant and the provisions of the law of Congress as specified in the Act.[3] The selection, management, and disposal of the said land is vested in the State board of land commissioners.[4] The statute provides for the procedure for the acquisition of such lands, which procedure may be supplemented by rules of the board, not in conflict with law.[5]

The person, company of persons, association, or incorporated company making application to the board for the selection of lands by the State shall have filed with the State engineer an application for

5 Secs. 662-696, Comp. Stats., 1910.

a permit to appropriate water for the reclamation of such lands. The application and procedure under the same are the same as for other appropriations of water, discussed in previous sections.[6] Before there can be an approval of the board, the whole matter must be submitted to the State engineer, for a complete report thereon, including the feasibility of the proposed project in all its phases. On receipt of the report of the State engineer, the commissioner of public lands shall place the request and proposal, with the engineer's report thereon, before the board for its consideration. In case of approval the board shall instruct the commissioner of public lands to file in the local land office a request for the withdrawal of the lands described in the proposal.[7]

The final proof of the settler upon these lands "shall embrace evidence that he has a perpetual water right for his entire tract of land sufficient in volume for the complete irrigation and reclamation thereof; that he has been an actual settler thereon, or has been for three years prior to the date of making his final proof a settler in the colony or settlement in the immediate vicinity thereof, and has cultivated and irrigated not less than twenty acres of said land."[8]

§ 2125. **Irrigation district law.**—The policy of the legislature of Wyoming having been entirely in the direction of State control, or State administrative laws, governing the acquisition of the right to use water, and its distribution, it was not until the Act of the legislature of 1907 that the irrigation district law was adopted, which law is better adapted to thickly settled communities.[1] In this State, as in other States adopting the irrigation district law, the Act was largely taken from the California law as amended, and as tested by the decisions of the Supreme Court of that State and by the Supreme Court of the United States.[2] There are, however, two very important distinctions, and these are, only lands that are to be benefited by such expenditure may be included within a dis-

6 See Secs. 1312-1336.

2 For the discussion of the irrigation district law, see Chap. 70, Secs. 1386-1432.

trict, and the State engineer is required to pass upon the feasibility of the plans for the district, after which they are submitted to the county commissioners of the county in which the district is located. By this provision the rights of the State, the general public, and the bondholders are protected.

The last section of the Act is notable, in that the provisions of the chapter shall not apply to or affect lands which have been or may hereafter be segregated under the provisions of the Carey Act, "nor to lands and the owners thereof situated under and susceptible of irrigation from any system of reservoirs, ditches, or canals for which water right permits have been granted, or shall hereafter be granted, by the State engineer to persons or corporations who propose the construction of reservoirs, ditches, or canals for the irrigation of lands susceptible of irrigation therefrom. And every irrigation district organized under the provisions of this chapter shall in all things be subject to the provisions of the statutes of this State relative to the acquisition, appropriation, use, and distribution of water and all rights thereto: *Provided,* that the water users and land owners under any irrigation system constructed by any person, company, or corporation, in conformity with the laws of the State, may, after such works have reverted to them through the operation of water right contracts, organize under the provisions of this chapter."[3]

§ 2126. **Provisions in aid of the National Reclamation Act.**—A right of way is granted over State lands for ditches and other works constructed under the authority of the United States.[1]

§ 2127. **Prohibiting the pollution of waters.**—Any person depositing in any river, creek, bay, pond, canal, ditch, lake, stream, or other waters any offensive matter or substance whatever shall be deemed guilty of a misdemeanor, and upon conviction thereof, shall be punished by a fine of not less than $10 nor more than $50. The discharging of sawdust into such water is also subject to the same penalty.[1] It is made the duty of the sheriff or coroner of any county, or a police officer of a city or town, to abate such nuisance,

[1] Wyo. Comp. Stats., 1910, Secs. 5965-5967.

the expenses for abating the same to be assessed to the party committing it.[2]

§ 2128. **Criminal statutes.**—Any person who knowingly falsely states his or her ownership in irrigation works, under oath, in the statements required as to such ownership, is guilty of perjury.[1] It is made a misdemeanor not to make fit and proper construction at the intakes of canals to prevent fish from passing therein.[2] The unlawful interference with headgates and the destruction of any irrigation works is made a misdemeanor.[3] Power is given the water commissioners to make arrests, and to make complaints before the proper courts.[4]

§ 2129. **Riparian rights in State.**—The doctrine of riparian rights in the State of Wyoming may be considered to have been wholly abrogated by the general theory of the law governing waters within the State, and as expressed in the constitution, statutes, and court decisions, although there is no express provision to that effect.[1]
